Amateur Radio Newsline(tm) Report 1690 - January 1, 2010

Amateur Radio Newsline report number 1690 with a release date of
Friday, January 1, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. A congressman wants every hertz of spectrum
cataloged for possible transfer to wireless broadband, the mayor of San
Francisco wants warning labels on cellphones, MARS gets a new mission
and the story on the record. Find out what we mean when we say on the
record on Amateur Radio Newsline(tm) report number 1690 coming your way
right now.

RESTRUCTURING: WIRELESS BROADBAND WANTS MORE SPEXCTRUM FTOM ANYONE

As we enter the second decade of the 21st century, wireless devices are
transforming the way the world access the internet and even how people
interact with one another in every day life. But these devices also
chew up a lot of radio spectrum. Now wireless providers fear they are
in danger of running out of bandspace to expand current services and
introduce new ones. They want more frequencies and this could put
every radio service in a firefight to save their allocations and this
could include ham radio. We have more in this report from Norm Seeley,
KI7UP:

--

It's a well known fact that as mobile and hand-held wireless devices
become
more sophisticated, they transmit and receive more data over the
airwaves. But the radio spectrum is finite and cellphones, texting devices
and the like are only allotted a specific number of megahertz in which to
operate.

Now, with demand for broadband wireless growing at a rapid pace, the giant
telecommunications corporations say they need a lot more bandspace. At
least 800 Megahertz more of dedicated spectrum to start and the government
from the White House on down seems to agree that this is a need that must
be quickly met.

And where will this spectrum come from? That's exactly what one elected
official says that Congress needs to determine and do so right
now. Democratic Representative Rick Boucher of Virginia is sponsoring a

bill that would mandate a government inventory of all of the airwaves. This to identify unused or underused bands that could be quickly reallocated for wireless services.

Boucher who is the chairman of the House Commerce Subcommittee on Communications, Technology and the Internet says that it is not a question of whether we can find more spectrum. Rather he says that we have to find more spectrum.

Because of this need, wireless companies are eyeing some frequencies used by TV broadcasters, satellite telephone communications companies and even federal agencies including the Pentagon. But several key wireless experts note, any reallocation of spectrum from current users to wireless broadband won't happen without a fight.

Broadcasters in particular have become very vocal of late in telling government regulators that any attempt to usurp spectrum used by that industry will be met with resistance. You can read that as likely a long and drawn court battle that could drag on for years.

Other potential sources of frequencies are federal agencies that handle everything from emergency communications to surveillance operations. But agencies such as the Defense Department say that it needs spectrum for such mission critical equipment as precision-guided weapons, advanced Radar systems and drone aircraft. And while the government has vacated some frequencies and is committed to finding compromises that work for the government and commercial sector, it can only do this if it does not jeopardize military capabilities or national security.

So why should all this concern ham radio? If you confine your operations to the High Frequency bands or even 6 or 2 meters its not likely that any proposed reallocation of spectrum would affect you. None of these bands are very appealing to wireless service providers.

Its when you get to 200 MHz and above that the hunt will likely be focused and right there lies the relatively silent 222 to 225 MHz allocation. Above that is the 70 centimeter ham radio allocation which is secondary to the Federal Government. If the government were to decide to move completely out of 70 centimeters it could put a lot of weak signal operators and repeaters in a fight to keep the spectrum on which they now reside.

But likely the real losses would be up in the microwave range where hams hold a lot of spectrum that to date is used mainly by experimenters. And a lot of it sits adjacent to bands used by other services that might eventually be pushed by government decree into moving elsewhere or simply told to disband to make way for more wireless broadband services.

For amateur radio as an FCC licensed communications service this means being vigilant about attempts at reallocations that might include any bands that we use. It also means making certain that our ham radio political leaders are aware that every hertz from DC to light will be under scrutiny by both the wireless broadband industry and the government in the coming

months and years.

As Karl Nebbia, who is the head of the National Telecommunications and Information Agency's Office of Spectrum Management points out: "For now, one thing everyone agrees is that there are no easy pickings in the airwaves."

And for the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting from Scottsdale, Arizona.

--

In reality, the real worry to amateur radio spectrum below 70 centimeters is not from direct reallocation of ham bands to wireless broadband. If spectrum is lost between 6 meters and 70 centimeters its will more likely be because those services now using 1.2 GHz and above will need to find new homes. Where will that spectrum come from? Likely from the lowest priority users the FCC can find. Namely hams at 222 Mhz or even as low as 144 MHz and above. (Amateur Radio Newsline(tm) and VHF Reflector from various published reports.)

**

RADIO POLITICS VS. TECHNOLOGY: SAN FRANCISCO MAYOR WANTS RADIATION WARNING NOTICES ON CELLPHONES

Meantime, the debate on whether cell phones should come with warning labels saying they may cause brain cancer is heating up in ultra-liberal San Francisco, California. That's where Mayor Gavin Newsom has made it known that he wants such labels even though it will likely put that city at odds with the Federal Communications Commission and the politically powerful cellular telephone phone industry.

The San Francisco mayor is calling for cell phone boxes to carry warning labels mush like cigarette packs. These would contain with what's called the radiation absorption rate on humans for each model telephone being merchandised in that city. This is the amount of energy that a person might be exposed to by using a cellphone or similar device.

According to news reports, cellular telephone radiation is a growing concern among politicians from coast-to-coast. A Maine state legislator named Andrea Boland is sponsoring similar legislation that would be state wide.

But the FCC says all cell phones sold in the United States are safe. And even the prestigious American Cancer Society is on record as saying cell phones are unlikely to cause cancer.

Cellular telephones only came into widespread use in the mid to late 1990's. Many researchers say it could be years if not decades before the long term studies on these devices and any relation to them being a cause of any form of cancer is complete. (SF OnLine)

PROPAGATION: ASTRONOMERS SAY 2009 WAS A BETTER YEAR FOR SUNSPOTS THAN 2008

According to several scientific journals, 2009 will fall short of 2008 's record of days with no sunspots or other solar activity. Astronomers note that the solar surface continues see occasional sunspots as we conclude a very active December 2009. This they say insures that 2009 will fall several days short of the 266 blank days of 2008 which was the year with the greatest count of sunspot free days since 1913.

The astronomical community says that the overall solar flux continues to gradually trend upward and there's every reason to believe the year 2010 will not dip below the low sunspot counts of the past three years. This they say is based on the actual trends since September and not only forecast data. They say that sunspot groups over the past three months have emitted more flares of greater intensity than at any other time in solar cycle 24. They believe that this is further evidence that the solar disc is awakening from its extended sunspot sleep. What the researchers cannot or won't promise is better High Frequency DX conditions which usually accompanies increased solar activity. (Science OnLine)

WITH NEWSLINE: ARNEWSLINE BOD MEETING JANUARY 10

Amateur Radio Newsline will be holding its annual Board of Directors Meeting by teleconference on Sunday, January 10th and we are looking for listener and reader input on how we can improve the weekly newscast and the Newsline sponsored Young Ham of the Year Award. If you have suggestions please e-mail them to us at Newsline at ARNewsline dot org before January 3rd. This will give us time to look your ideas over for possible discussion in the meeting agenda. Again the meeting is Sunday, January 10th and we sincerely welcome your ideas. (ARNewsline(tm))

RESCUE RADIO: MARS GETS A NEW MISSION

The former Military Affiliate Radio System has been re-christened as the Military Auxiliary Radio System and has been charged with a new mission in the area of Homeland Security. Bruce Tennant, K6PZW, has the details:

--

Yes, MARS does have a new mission. On Wednesday, December 23, the Department of Defense issued an official instruction concerning MARS that is effective immediately. This Instruction gives the three MARS services

-- Army, Air Force and Navy/Marine Corps a new focus and their first major revision since January 26, 1988.

In the past, MARS had focused primarily on emergency communications and health and welfare support. The DoD's Instruction now directs the three MARS services to provide contingency radio communications to support US government operations, Department of Defense components and civil authorities at all levels. This in providing for national security and emergency preparedness events.

MARS units will still continue to provide health and welfare communications support to military members, civilian employees and other designated groups when in remote or isolated areas, in contingencies or whenever appropriate. However, MARS must also be capable of operation in radio only modes without telephone service or access to the Interne. Also, it must be sustainable on emergency power when public utility power has failed. Also, some MARS stations must be transportable for timely deployment. Unfortunately, the Instruction does not mention or direct which of the three MARS services will take the lead when responding to events.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The Department of Defense defines a "military auxiliary" as "an organized body of volunteers prepared to supplement the uniformed services or any designated civilian authorities by provision of specialized autonomous services when called upon or when situations warrant. It gives the Civil Air Patrol and Coast Guard Auxiliary as examples of auxiliaries. A more in depth article on this changes to MARS is at the ARRL's website at www.arrl.org. (KA5S, ARRL, others)

HAM RADIO IN SPACE: KIDS DAY ON THE GROUND AND ON AO-51

The first of two 2010 Kids Day operating events takes place on Sunday, January the 3rd and this year it will be in space as well as on the ground. This is because AMSAT North America and the AMSAT Oscar 51 Operations Group will be making that ham-sat available for this twice year fun operation.

The terrestrial version of Kids Day takes place from 1800 to 2400 UTC. The ARRL suggests using the following frequencies for Kids Day QSO's: 28.350 to 28.400 MHz, 24.960 to 24.980 MHz, 21.360 to 21.400 MHz, 18.140 to 18.145 MHz, 14.270 to 14.300 MHz, 7.270 to 7.290 MHz, 3.740 to 3.940 MHz, as well as your favorite 2-meter repeater with permission of the repeater's sponsor. In space, AMSAT has announced that its AO-51 satellite will be configured with its uplink at 145.880 MHz FM voice and the Downlink at 435.300 MHz, also FM voice. In either case, please be sure to observe third-party restrictions when making DX QSO's.

The Kids Day operating event is not a contest. It's a way to tell children
worldwide about the magic and mystery of two way hobby radio communications. To do this, Amateur radio stations are being asked to devote this short time window to promote the terrestrial hobby and ham radio satellite operations to youngsters This, by providing a place to make contacts with other Kids Day stations around the world.

More information is on-line at www.arrl.org. To find it just use the search feature with the words Kids Day. (AMSAT NA, ARRL, others)

**

OPERATING AWARDS: THE NORTH SCOTLAND YAESU HERITAHE AWARD

2010 has been named Yaesu Heritage Year by the North Scotland Contest Group as they take to the air with the special event callsign GS2MP. Operators GM3WOJ and GM0NAI will be using their vintage Yaesu transmitters, receivers and transceivers during the whole year and sporting a different Yaesu built radio each.

Operation will mostly be on 40 and 20 meters, SSB and CW, using classic radios like the FT-dx-100 , FT-200 and FT-dx-401 to name only a few. Yaesu UK Ltd. is sponsoring the event and supplying special QSL cards, small trophies and a special prize to the overall winner. Hams worldwide are invited to work GS2MP and earn points towards the Yaesu Heritage Year Award.

For more details, please visit www.gm7v.com/yaesu2010.htmb on the World Wide Web. (Southgate)

RADIO EDUCATION: RADIO SOCIETY IN WALES RECEIVES TRAINING GRANT

The Welsh Aberdare and District Amateur Radio Society has been presented a ï¿½5,000 (pound) grant from the Awards for All Wales fund. The cash will be used by the group to provide training facilities, materials, equipment and projects for students wishing to undertake a course leading to a Radio Communications Foundation, Intermediate or Advanced accredited examination.

The society was formed in March 2009 and has around 20 members. It has already helped five people whose ages ranged from 14 to 65 through the Foundation License and there are currently two more students preparing for their examinations. The group has also obtained two recognized tutors for all levels of the amateur radio license preparation and has been designated as an official examination center. A spokesman says that some money will be spent on equipment to upgrade the existing station to add new or
190-wales
additional modes. (WalesOnline)

HAM RADIO SCOUTING: A SUMMER QRP SCOUTING TREK DOWN UNDER

And while it may be cold and wintry in the Northern Hemisphere, down under its summertime and some Scouts in Australia have decided to take a hike and bring ham radio with them. Not only that, these scouts want to make contact with you. Jim Linton, VK3PC, of the WIA News has the rest of the story:

--

Four members of the Scout Australia, Victorian Branch Scout Radio and Electronics Service Unit will be hiking the French Island National Park southeast of Melbourne and operate the scout callsign VK3SAT for the Keith Roget Memorial National Parks Award.

Peter Fraser VK3ZPF, Hayden McManus VK3FRST, Marcus Berglund VK3TST and Adam Scammell VK3YDF will be on air 0400 UTC on 9 January until 0100 UTC 10 January.

The bands proposed are 80m, 40m, and 20m using wire antennas strung in the low trees on the island. As the team has to carry everything in backpacks to the camping ground the transceivers are to operate a maximum of 15w PEP will be powered from small sealed lead acid batteries.

VK3SAT hopes to make many contacts and will be QRV as long as the battery power lasts. Details of the Keith Roget Memorial National Parks Award can be found on the Amateur Radio Victoria website in cyberspace at www.amateurradio.com.au

I'm Jim Linton VK3PC and you're listening to the Amateur Radio Newsline.

--

15 watts from backpack radios into makeshift antennas in the Australian wilderness is going to make this one a hard contact to snare no matter where in the world you may live. (WIA News)

**

HAM RADIO ON THE WEB: HAMTUBE.COM WEBSITE FOR SALE

The popular hamradiotube.com website is up for sale. According to an announcement on the website by its owner Donald Dubuque, W4DJD, operating costs coupled with a lack of donations from the viewing public have lead him to make the decision to divest himself of the site.

To quote Dubuque's website posting: "These types of sites don't run cheap. It takes money to keep the bandwidth and storage that videos require."

Hamradiotube.com is an amateur radio only version of the YouTube.com web operation. W4DJD says that he enjoys running the site and that he is sad to let it go. If you have the financial means to take it over, please contact W4DJD at his callbook address. (Southgate, HamradioTube)

**

NAMES IN THE NEWS: WHITE HOUSE NAMES W7HAS AS NEW CYBERSECURITY COORDINATOR

Some names in the news. The White House has named Professor Howard A. Schmidt, W7HAS, of Issaquah, Washington as its new Cybersecurity Coordinator.

A long time public servant, Schmidt became interested in computer forensics as a police officer. He started working with the Air Force in the early 1990's when he was called upon to assist the Office of Special Investigations to assist in countering hackers trying to penetrate Department of Defense systems.

In addition to his work with the Air Force, W7HAS served as an information security advisor to the government for more than 30 years working for the FBI and the Bush administration after the September 11, 2001 terror attacks on U-S soil. He left the public sector in 2003 to join eBay. Schmidt was also the first chief security officer at Microsoft and a co-founder of the company's Trustworthy Computing initiative.

Howard Schmidt holds a bachelor's degree in business administration and a master's degree in organizational management from the University of Phoenix. He also holds an Honorary Doctorate degree in Humane Letters. In addition to amateur radio, he is an avid Harley Davidson rider, private pilot, fisherman and outdoorsman.

In his new position he will have regular access to the President and serve as a key member of his National Security Staff. He will also work closely with the President's economic team to ensure that cybersecurity efforts keep the United States both secure and prosperous. (Published news reports)

**

NAMES IN THE NEWS: CANADIAN ARTIST WANTS TO PAINT COMMUNICATIONS IN SOUND

A Canadian artist who works primarily with sound and vision is inviting radio amateurs with good HF capabilities to take part in an audio art project on 20 meters. Kapwani Kiwanga, will transmit a message on 20 meters from Eindhoven, the Netherlands, to territories that have a historic link with Holland. These include such places as Surinam, Indonesia, and South Africa.

Participants in these countries will be asked to re-transmit the received message back to her in Eindhoven. Kiwanga will transmit it back to and so on and so on. This ping-pong effect will increasingly distort the message finally resulting in an abstract artistic sound recording.

Kiwanga says that she would like to get started on this project as soon as possible. If you would like to take part in it, please e-mail her to kiwangakap (at) hotmail (dot) com or call her on 0031 617 638 920. Also, please copy the South African Radio Leage News at armi@sarl.org.za which is following this rather interesting ham radio art creation come to be. (SARL)

THE CHANGING OF THE GUARD: EXPLORER KNUT HAUGLAND LA3KY - SK

The changing of the guard in Amateur Radio continues. This, with the sad news that Knut M. Haugland, LA3KY, the last surviving member of the crew that crossed the Pacific Ocean in 1947 on board the balsa wood raft the Kon Tiki has died at age 92.

Knut Haugland was a former Norwegian resistance fighter and explorer who was honored with Norway's Norways's highest decoration for military gallantry, the War Cross with sword, for helping prevent the German nuclear program from acquiring heavy water to make weapons during World War 2. Similar honors were also bestowed upon him by Great Britain and France.

After the war ended he joined the Kon Tiki ocean going raft expedition of Norwegian anthropologist Thor Heyerdahl, as one of its radio operators. The Kon-Tiki eventually sailed 4,900 miles from Peru to Polynesia in 101 days to prove Heyerdahl's theory that ancient mariners may
have migrated across ocean stretches.

According to Wikipedia, during the Kon Tiki Pacific crossing Haugland and fellow crew member Torstein Raaby were in frequent radio contact with American amateur operators. Much of the communications consisted of sending meteorological and hydrographic data to be passed on to the Meteorological Institute in Washington, DC.. Despite the tiny radio which had an output of only 6 watts they managed to contact radio operators in Norway, even sending a telegram to congratulate King Haakon VII on his 75th birthday. Haugland also played himself in the 1950 documentary film about the Kon-Tiki voyage.

The passing of LA3KY was announced by the director of the Kon-Tiki Museum who said that Haughland died in an Oslo hospital on Friday, December 25th. (KC5FM, N6BQD)

**

WITH NEWSLINE: ANDY JAREMA, N6TCQ MEMORIAL ON JANUARY 23rd

A memorial celebrating the life of former Amateur Radio Newsline treasurer Andy Jarema, N6TCQ, is slated for Saturday, January 23rd in Glendale, California. As regular listeners know, Andy passed away from multiple organ failure just before noon on Tuesday, November 24th. In keeping with Andy's wishes this memorial to be co-hosted by his sister Ann and his life companion Judy Hurst will be upbeat and a reflection of the way Andy lived his life. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: NANOCOMPUTING

The new year brings with it some new advances in nano technology as we hear from Jim Davis, W2JKD:

--

EMERGING TECHNOLOGY: BIOELECTRIC ADVANCES TO INORIVE COMMUNICATIONS AND COMPUTING

Combining nanoelectric transistors with bioelectric machinery could soon lead to improved electronic, computing and communications products. So say researchers at the Lawrence Livermore National Laboratory where they have devised what they term as a versatile hybrid platform that uses lipid coated nanowires to build prototype bionanoelectronic apparatus.

While modern communication and data processing devices rely on electric fields and currents to carry the flow of information, biological systems are much more complex. They use an arsenal of membrane receptors, channels and pumps to control signal transduction. This the scientists claim is a system of internal signal flow unmatched by even the most powerful computers.

Human is cited as a primary example. The researchers note that conversion of sound waves into nerve impulses is a very complicated process, yet the human ear has no trouble performing it.

They add that the mingling biological components in electronic circuits could enhance biosensing and diagnostic tools, advance neural prosthetics such as cochlear implants, and could even increase the efficiency of future computers.

The research appeared in the online version of the Proceedings of the National Academy of Sciences and more recently in Science Daily. You can read it at http://www.sciencedaily.com/releases/2009/08/090811091834.htm

--

Truly a case where the smaller is the better for all of mankind. (Science Daily)

**
THE SOCIAL SCENE: 7th ANNUAL STRANGE DX CONVENTION APRIL 17

Only two items on the ham radio social calendar this week. The 7th International DX Convention organized by the Strange Radio Team will be held April 17th and 18th in Italy. The venue is Paestum near Salerno which is billed as a fantastic archeological area and tourist site. Access by air is through the Napoli Capodichino Airport. More information will soon be on-line at strangeradioteam.com/idxc (Strange Radio Team)

**

THE SOCIAL SCENE: EMCOMMWEST SEEKS SPEAKERS

The 2010 EMCOMMWEST ham radio convention to be held April 30th to May 2nd at the Grand Sierra Resort in Reno, Nevada, is looking for speakers.

EMCOMMWEST is an annual forum for radio amateurs to discuss the latest emergency communication techniques, learn what served agencies need and requirements are as well as learning about both the successes and failures from those directly involved in emergency communications work.

Because of this presentations should be in some way emergency communications related. If you would like to speak at this event, please send an e-mail to speakers@emcommwest.org. In return you will be sent a speakers application that allows potential speakers a place for a short description of your proposed talk as well as an opportunity for you to categorize it.

And less we forget. EMCOMMWEST is recognized by the ARRL as an Operating Specialty Convention. The event's website is www.emcommwest.org (KQ6FM)

**

HAM RADIO IN SPACE: ARIS MEETS TO DISCUSS HAM RADIO IN SPACE ISSUES

Tuesday, December 15th saw a meeting of the Amateur Radio on the International Space Station working group. Agenda items addressed included the VHF Automatic Identification System and the new ARISS antennas which were recently installed on the Columbus module. Also discussed at this gathering was the status of ARISSat-1 whose deployment has been delayed until later in 2010. This comes after , NASA informs AMSAT that the schedule of work for space walks or EVA's at the International Space Station is being revised. (ANS)

**

HAM RADIO IN SPACE: NEW CANADIAN ARISS WEB PAGE

And a new Canadian Web page has been developed to promote the Amateur Radio on the International Space Station or ARISS program. The page is sponsored by the Ottawa Valley Mobile Radio Club and is located in cyberspace www.ovmrc.on.ca. Just select "ARISS" at the bottom of the left hand side menu. (Press Release)

**

DX

In DX, word that DC0KK, is active until January 7th as from Sri Lanka as 4S7KKG. Operations are on all HF bands using CW, SSB, RTTY, PSK and WSJT. QSL via DC0KK, direct or by the Bureau.

W2APF will be traveling on board the ship 'National Geographic Explorer' heading to the Antarctica region between February 8th to March 5th. He is expected to be operating as W2APF/C6A/MM while on board the ship. In the Antarctic territories he will be signing W2APF/KC4 and VP8DML while in the territory of the Falkland Islands. QSL all of this activity via W2APF.

N6QEK will be active portable VY1 from Whitehorse, Yukon Territory through January 4th. Listen out for him on all bands between 80 through 10 meters using RTTY, PSK31 and SSB. His main goal is to activate the Yukon Territory for the ARRL RTTY Roundup Contest on January 2nd and 3rd. QSL direct to his home call or via Global QSL.

Lastly, looking ahead to next spring, the Midwest 6 Meter DX Group will operate stroke J 8 on 6 meters from Bequia Island between June 28th and July 5th. QSL via KB3RHR.

(Above from various DX news sources)

**

THAT FINAL ITEM: HOW RECORDS WERE MADE

And finally this week, have you ever wonder how records were made. We are talking records as in phonograph not computer files. Amateur Radio Newsline Bill Pasternak, WA6ITF, knows because he has seen the movie:

--

Running almost 24 minutes, the movie is called "The Sound and the Story." And it is the story of the record industry as told back in 1956 by RCA when it was one of the worlds biggest producers of phonograph records, record players and associated products.

"The Sound and the Story" follows the process of making a 33-1/3 RPM "Long Play" or "LP" record, from original recording to first its play on a consumer record player. The movie begins with a lesson in early recording technology including the mastering on an early Ampex tape machine that's fed by a crude by today's standards recording console used back then. It in turn is fed by a number of RCA ribbon microphones of the type we have all seen at radio museums or for sale on-line on eBay. The show also touches on practices such as multiple takes and terms such as dynamic range, though with little explanation of what any of this means.

The exacting and surprisingly complex methods used in crafting the record "master" and the process of stamping the platters are illustrated in great detailed. Additionally there is an explanation of the distribution system that was used at RCA's Indianapolis plant, which also supplied the roots of the RCA Music Service and other similar operations. These operations -- as we all know -- are now just memories of an era gone by.

"The Sound and the Story" clearly was aimed at the general audience with viewers of the film will also learning that RCA really took its end to end record quality control very seriously. However, those with experience in the record industry or the technically curious will have much to entertain them for the 20 some odd minutes that this show plays.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in the City of Angels.

--

"The Sound and the Story" would make an excellent program for radio club viewing if a tape, DVD or even a projectable 16 millimeter film print were to be made available. Meantime you can enjoy this piece of electronic nostalgia on-line at www.archive.org/details/SoundAndTheS to enjoy. (RCA)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73, Happy New Year and we thank you for listening.

2. New club for Morse enthusiasts

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-03 04:33:26 UTC
From: KØHB <kzerohb@gmail.com>
Message-ID: <hhp62i$4q$1@adenine.netfront.net>
Source record: 1724

A new club has been formed among Amateur Radio operators who are Morse Code (CW) enthusiasts. It is called The CW Operators' Club (CWops). CWops encourages the use of CW in Amateur communications, and it promotes goodwill among Amateurs around the world by planned CW activities.

CWops is international in scope, membership and management. Its focus is the use of CW, whether for contesting, DXing or ragchewing. Moreover, it promotes every form of sending -- if it's CW, CWops supports it!

For further information, go to www.cwops.org. There you will find everything that you might want to know about CWops, including our bylaws and articles of incorporation, our planned activities, an explanation of how to become a member, and a list of current members.

Jim Talens, N3JT
Secretary, CWops

Good thought, Ivor, but it is probably due to lack of space between "to" and the link address. I tried it again on Sunday night and it had the same problem using the link from the message text. Used separately from the browser, it will go to the proper address.

What's next? Secret handshakes and weird rituals?

"As described in detail in the Bylaws, to become a CWops member you must

be nominated by a current member and sponsored by three other members
who have worked you twice within the previous 12 months. The nomination

process must be completed within a period of five months.

Once you have your sponsors, there is a 30-day waiting period. Absent
an objection, you will then receive a formal invitation to join, and
after registering and paying the annual dues of $12 U.S., you will
become a CWops member and receive your membership number. All of these
steps are explained in the Bylaws. "

I read the bylaws and they do seem to be a pretty exclusive group.

What I see as the flaw in their system is that they state that they want to create a renaissance in CW. Okay, that's a worthy goal. I do question how they are going about it.

But setting the bar at 25 wpm is not going to produce that goal. And reading through their web pages, it is not difficult to derive a conclusion that they are working at a atmosphere of exclusivity. Exclusivity and renaissance are pretty much at odds. Plus there is the strange part in the FAQ about one's sponsors possibly making a applicant take a test. That's just inconsistent and odd, and smacks of sub-groups, and people who are more equal than others.

That being said, if a person likes that sort of thing, that's just fine by me.

But for myself, I'm happy to be member number 891 in the Second Class Operator's Club.

I'm not a member, but I don't see any secret handshakes or weird
rituals.

What I do see are requirements that prospective members prove
themselves by actually getting on the air and working existing members,
using CW, at a given speed or better.

I see it very differently.

CWOps isn't the only game in town. FISTS has been around a long time,
for example. SKCC has attracted thousands of members in just a few
years. Second Class Operator's club is another example. All have pretty
minimal entry requirements. That's not a bad thing.

ISTM that the idea for CWOps is to have a club focused on those with a
somewhat-higher level of skill in Morse Code, who actually use the mode
on the air regularly. The requirement for QSOs with members looks to me
as a way of insuring a personal connection between members.

So I think there's room for a club like CWOps, too. It will be
interesting to see how membership grows.

> I'm happy to be member number 891 in the Second Class
> Operator's Club.

>
Which reminds me - I gotta sign up for that one.

One thing I remember clearly from my early days in amateur radio is actually seeing and hearing real live Radio Amateurs using Morse Code at a high level of skill.

I think it was Field Day 1969 when I encountered a grizzled OT working CW on the low end of 40, working them faster than I could keep track of through the fierce QRM of the crowded band. Even though FD had only been going for a couple of hours he'd made more QSOs than many stations would make all FD.

"Which one are you copying?" I asked

"All three" said the OT, logging another one. "Now get me another beer"

I went to get it, and decided right then that someday I'd have that level of skills.

I gave up long ago trying to predict what motivates ham radio operators. Personally, this whole idea of having to be nominated by current members turns me off, but I know that I am far from typical in that regard. If the process of obtaining membership in this club actually results in increased cw activity, more power to them. If it ends up being a method for people to pat each other on the back without ever keying a transmitter, then it's completely worthless.

Personally, I wish that they had instituted a tiered membership for people who are learning cw. One way to increase cw activity is to motivate trained operators to get on the air, but another way is to motivate new hams to learn and use cw. If being a member of an exclusive club is a strong motivator for hams, then recognize the newcomers and reward them for increasing their proficiency.

Let me give an example from my own world.

In the PAQSO Party, we like to encourage the use of OOK Morse. That's why we give more points to them. In a year or two, I'm going to increase that point value on the bands above 80 meters to 2 points from 1.5 per CW QSO.

That's telling people that if they want to get more points per QSO, all they have to do is use OOK Morse. I'm not telling them they have to do it at a certain speed, just giving a gentle push. And I'm not trying to single out Morse, because I also give out 2 points for PSK31 and RTTY also. I want people to use those modes too.

And yes, I have had some Morse enthusiasts who became angry when I added the other modes. They wanted the extra points exclusively for themselves. Sorry, but I'm an equal opportunity promoter. But that does tell me that the increased points per QSO is a powerful incentive.

The main reason that I don't believe that they will be successful in promoting Morse code is that they are only open to people who are already proficient in the art. The only rationale I can come up with that comes out as promotion is that someone will really really want to join the CWops, so he practices a lot so he can get to 25 wpm, so they allow him to join. IOW, they are promoting on the side of CW Ops who are already there. In reality, there aren't likely to be too many people who will decide to learn and use OOK Morse in order to join that club.

We Second Class Operators are a little different though, in that our
motto is "Competence is tolerated, but not encouraged". We're kind of
the antithesis of exclusive, and we make fun of everything, including
the other members. Great place to let your hair down - if I had any to
let down. 8^)

Exclusive? How so?

Nobody has to be invited to actually use CW on the air. Membership in
this or any other club is not required.

There's no longer any code requirement for licenses in the US or most
(all?) of the rest of the world, so its use is now completely voluntary.

Even so, large chunks of the bands are still populated almost
exclusively by CW ops.

> And folks marvel at its decline...

If people don't use CW, it's because they don't want to, not because
someone won't let them.

True, however, 'exclusive' is implied in the bylaws that call for nomination for membership, pop tests to prove competancy, etc. It's just another form of cronyism by a handful of folks not happy that the hazing requirement to obtain HF privileges has been removed.

Nothing wrong with it but the result will be the same hundred old guys who all belong to the same tired hundred clubs all with the same stated purpose of "saving" ham radio by protecting and promoting Morse.

Been there, done that, got the shirt and it still doesn't work...

And that worries me.

I'll almost certainly never be qualified to become a member of that CWops club due to physical limitations, but I realize that Morse code and it's use in Ham radio is a skill that should never go away. The concept of working the world with a rudimentary radio and no infrastructure is pretty powerful. The features of the mode make it possible, the small bandwidth, the human powered DSP, that's all great stuff. It absolutely needs to be encouraged. It just takes some work. And we must be honest, it takes more work for some of us (like me) than others. But that's okay, I considered the months I put in to get to a paltry 8 wpm well worth it.

To me it's hard to call a club that has a lower limit of 25 wpm not exclusive. They are promoting themselves to people who have already made the grade. But enough about them - I don't begrudge them their status, just that I think they are not going to achieve one of their stated goals.

Do we want to promote OOK Morse? How about this idea......

Given that there is now a rather large divide between competent Morse operators, and those starting out, there is some serious catching up to do.

I would propose that a web based method of learning OOK Morse might just do the trick. People have a tendency to be pretty fearful of learning on the radio, the person on the other end might not be terribly patient, and there are some people who just get bored listening to slow Morse.

This system would give feedback on the copy and sending, practice sessions, and testing.

This so far is kind of like the canned software. But where this departs is that the student can send back and forth to other students. Conversations can be made at really slow speeds, and with people of like skill level. Text messaging can be incorporated to compare notes. And another feature is a mentor can be added to the system. A

volunteer could work with the students to increase their proficiency.

The "hooks" of such a system are the web based interface, the semi-chat room atmosphere, and the lack of pressure if no pressure is desired.

It isn't breaking any technological ground either. The biggest issue is who would host such a thing? My best guess is that the ARRL would be a likely candidate.

I believe that would be a much better way to promote OOK Morse.

Hi Dick,

OOK stands for On/Off keying Morse. It's really what most people call CW. I think the distinction was made when some folks questioned the distinction between Morse and CW, which technically speaking isn't actually CW. Just kind of a semantics thing - I ended up settling on OOK Morse - mostly anyhow - It's probably the most accurate. That being said, everyone does know what we're talking about when we say CW.

I think that Jeff was referring to the club in question, not to CW in general.

At least for me, the issue is promotion of the mode, how new Ops might be brought into the mix.

For some folks, this is not an issue, for others, it is a concern. Some of the concern might be historical, some folks just happen to like something, and therefore like to promote it.

But some of us believe that the mode has merit, and would like to see it continue. Now that element 2 is history, how do we promote the mode?

I believe it does need a little promotion, at least at the present time, because there is a pretty big gulf between people like me, people that don't know it at all, and the really proficient operators. There aren't all that many people in the middle any more. Perhaps after a new balance is achieved, there will be less need for promotion, but at present, I believe it is critical. We don't need to convince the already proficient, we need to work with the new people.

You can have a QSO with me, then. I have a bunch of those numbers but I
don't ask folks for them during QSOs unless there's a specific
reason (such as they ask me).

IIRC the whole exchanging-numbers deal came from the Ten-Ten folks,
who mostly use 'phone...

I'd like that very much Jim!

At 50 I don't think I'm the oldest guy in the room but it sure seems like a long time since I enjoyed a QSO without being asked if I had this or that number to exchange. And I blame that on the endless string of little CW clubs that sprout like mushrooms in the spring...

Perhaps that's why I was being a little too hard on this latest club venture.

Apologies if any were offended.

I've been around for a while myself (licensed 49 years ->today!) and
have adopted and dropped many operating roles in that time. I'm
currently strictly a CW operator, recently gave up chasing DX due to
the lack of sunspots, and I'm now trying contesting. So, it's been a
while since I've had a "real" QSO.

Still, if I slide up above 14025, I find US CW operators, obviously
relative newcomers, holding what I'd certainly call traditional
person-to-person conversations on CW. You know that since they don't
have to operate CW any more, they're there because they like it. There's
certainly a similar neighborhood on 40 or elsewhere where you'll find
the same sort of activity.

I'm sure any one of them would welcome the chance to have an extended
chat with anyone who's willing to slow down a bit and would probably
benefit from the chance to listen to "good" CW. And, I doubt that any of
them have any numbers to exchange :-)

Such a system already exists, and it's in use by members of the Morse Telegraph Club, and others who use American Morse. I suggest you contact Les Kerr, N7RZ, or check the "MorseKOB" website at http://home.comcast.net/~morsekob/ for more information.

> mode?

Oddly enough, the only mode that was outlawed by the FCC was spark.

Yet some people still carry as if dropping Element 2 was somehow
banning CW (Morse Code) from the airwaves.

I just don't get it.

You know, there's other "out dated" modes that are still in use
on the Amateur bands. AM and RTTY to name a couple. And yet,
there NEVER was a proficiency test for either mode.

Speaking of outdated, there are quite a few people out there that
are proficient at sending and receiving telegraph (sounder) based
code as well, and not all of them are 85+ years of age.

Will somebody please point out that the calender says 2010 not
1930.

Things change, but there will always be room for and people who use
CW on the Amateur bands.

Oh, and in answer to your question, you promote it by using it.
And you make a point to tutor others how to use it. And that means
putting up with people like me that are a bit rusty when I happen
to get on the air. QRS doesn't mean calling CQ on my frequency
instead of slowing down so I can copy.

On Jan 6, 12:17 pm, "Michael J. Coslo" <n3lico...@gmail.com> wrote:

> Now that element 2 is history, how do we promote the
> mode?

Ten Ways:

1) Use Morse Code on the air. For ragchewing, DXing, contesting, traffic handling, QRP, QRO, QRS, QRQ, whatever floats your boat. If your favorite band is crowded, try another and/or get a sharper filter. If you contest, even a little, send in your logs, photos, soapbox comments, etc. Our presence on the air is essential.

2) Work on your Morse Code skills. Got a Code Proficency certificate?

But Morse Code skill is not just speed. Can you send and receive a message in standard form? Can you do it faster than someone on 'phone? Can you do both "head copy" and write it down? How about copying on a mill? Ragchewing? Contesting? Being able to have a QSO at slow as well as fast speeds? All are forms of proficiency.

3) Find a local club that does Field Day and go out with them, particularly if they have little or no Morse Code activity on FD now. Help with their Morse Code efforts however you can - operating, logging, setting up, tearing down, etc. FD is one way to actively demonstrate 21st Century Morse Code *use*. Talking to people about Morse isn't nearly so effective as showing them.

4) Set up a Morse Code demo at a local hamfest/club meeting/air show/ town fair/middle school etc. Not as some sort of nostalgia thing but as a demonstration that Morse Code is alive and in use today. Have handouts and audience-particiaption if possible.

5) Conduct Morse Code training - on the air, in person, over the 'net, whatever. Help anybody who wants to learn. Could be as simple as giving them some code software, tapes or CDs, or as involved as a formal course at a local community center.

6) Elmer anybody who wants help - even if they're not interested in Morse Code at all. Your help and example may inspire them.

7) Write articles for QST/CQ/Worldradio/K9YA Telegraph/Electric Radio/ your local hamclub newsletter etc. Not about the code *test* nor about Morse Code history, the past, etc., but about how to use Morse Code *today*, and how you are using it. How about an article on what rigs are best for Morse Code use, and why? Or about the differences between a bug, single-lever keyer, iambic A and iambic B? Your FD experiences

with Morse Code? (QST, June, 1994) Yes, you may be turned down by the first mag you submit it to - but keep submitting.

8) Get involved in NTS, QMN, ARES, whatever, and use Morse Code there. The main reason so much emergency/public service stuff is done on voice is because they don't have the people - skilled operators - to use any other mode.

9) Join FISTS & SKCC and any other group that supports Morse. Give out numbers to those who ask for them even if you're not a contester/award collector.

10) Use the online environment to its fullest. The online training idea is excellent. Another is to post Morse-Code-centric videos on YouTube (one fellow did it with guitar lessons, why not Morse Code lessons?).

"The test" is long gone and FCC won't bring it back. FCC won't preserve our standards and values - we have to do it.

And our attitude is a key part of that (pun intended). If we're seen as a bunch of old grumpy gus types, not many will want to join us. But if we present ourselves as a fun-loving, welcoming, young-at-heart-and-mind,
helpful group with useful skills, people will want to join us.

IMHO

FCC didn't outlaw spark use by hams. The Department of Commerce did;
FCC would not exist for several more years. (yes, I'm a stickler for
historical accuracy).

But it was only outlawed after hams stopped using it (1927 IIRC).
>
> Yet some people still carry as if dropping Element 2 was somehow

I think it's a semantics/attitude thing. People write "they dropped the
code" not "they dropped the code TEST". Or they name an organization
"No-Code..." not "No-Code-Test..."

It may be a minor difference to some, but not to others.
>
> You know, there's other "out dated" modes that are still in use
> on the Amateur bands. AM and RTTY to name a couple. And yet,
> there NEVER was a proficiency test for either mode.

People who are going to use AM already know how to speak and listen.
And I don't think it's possible to get an amateur license if you can't
read, which is the main skill needed to use RTTY.

I think the big issue with Morse Code testing was that most would-be
hams don't already have the skills needed to use the mode, even at a
basic level. So having a test, even a basic 5 wpm test, meant actually
learning a new skill. Unlike "book learning", skills take practice and
active engagement of the student to learn.

All ancient history now.

> Things change, but there will always be room for and people who use

I hope so. But there are a few who would completely ban Morse Code
use if they could.

Of course. Speed is relative. To the 5 wpm operator, 15 wpm is blazing fast. To the 45 wpm operator, 15 wpm is crawling slow.

Speed isn't the only skill, either

See you on the low end of 80 and 40.

I enjoy cw. It is a positive part of my life.

But there is exactly one reason why I have been able to experience this pleasure: The FCC _forced_ me to invest the effort, and endure the pain, to build this skill. It was not fun at first. I got my novice license when I had one year to build my code speed to 13 wpm or I would be off the air. At first that process was drudgery. But at some point it became fun. It has been fun ever since.

There's a good analogy with learning a foreign language. At some point, it transitions from active effort to being natural. People in their first week of learning Spanish can't comprehend the pleasure of being able to read Don Quixote as the author actually wrote it.

Without the FCC's heavy handed pressure, I would not have learned a skill that has given me great pleasure in my life.

So now that the requirement is gone, the number of people who have the opportunity to enjoy the pleasure of cw will be much reduced. There are people who will learn cw on their own, but not many. Most new hams won't know that they're missing anything.

For those of us who enjoy cw, the issue of no-code was a difficult one. My personal opinion is that, in spite of what I said above, removing the cw requirement was the right decision. Yes, it will deprive some people of an enjoyable experience. But we need new recruits, and the cw requirement was a roadblock to new people entering the hobby.

Isn't that a bit revisionist?

Entry level at the time meant simple equipment. Getting a CW transmitter
on the air was the first step. "How can I communicate with a hand key?"
With Morse code of course. Plugging a microphone into the key jack won't
work.

Secondly, the FCC (and I use that term broadly rather than have to list every iteration of their existence) also wanted a trained pool of radio operators. And as Jeff Davis said, Morse Code was the lingua franca of communications back in the early days.

I just can't see inter agency communications between police, fire, medical and the Red Cross being handled by some guy wearing a celluloid eye shade, sleeve garters and hunched over a code key. *

*With a tongue and cheek reference to the costumes the two guys wore on the Jay Leno Show during a Cellphone Texting VS Morse Code contest.

Hi Bill, I looked at the site, and unless I'm missing something, it isn't what I was proposing. That looks pretty much like the standard Morse code learning program. I want a place where people can talk to each other, to bootstrap themselves to competency, as well as having the standard learning tools. Hang out with their peers for a while. Morse needs a nursery system, and it might just be easier to get them involved and up to a speed where they don't make proficient Ops fall asleep.

Another part is that it isn't just copying Morse that is an issue. The abbreviations that Morse Ops use can be a little confusing. They know what they mean, but so many use slightly different ones that a new guy can get really confused. I remember when I first started listening to live CW, I could copy the ARRL practice code okay, but listening to

Actual QSO's, I'd copy it down, and think "this has to be wrong, And as a student of Morse who tends to "fly behind the plane", I'd get stuck. So it would be good to slowly work the abbreviations in after a while.

I surely won't. and not for "hazing". I don't see any hazing in
effect here, because the requirements are already attained by
prospective members. I will note that the potential tests the pledge
might have to take, depending on the will of their sponsors is just
odd. There should be a competency test, or their shouldn't be.

> Almost *any* nontrivial requirement is bound to be labeled a "hazing
> ritual", "cronyism", "luddite" or other derogatory term by somebody.

Kind of. I think a large part of the discussion, at least for me, is
the idea that this club furthers the use of Morse code. They state it
as one of their purposes. I don't think that their tactic will work.

I'd even go so far as to state that I don't really care if they are an
exclusive club. That's no problem. There is a need for people of a
like mind to congregate. But if a club is one thing while purporting
to be another, I'm inclined to remark about it.

And How! I'm not a big user of Morse code, but don't regret a minute spent learning it.

My own specialty in amateur radio is Computer based stuff. My shack has 4 computers, one main, one to control the HF rig and run digital modes, one to monitor APRS, and one to record the local repeater for a interferer. Then there's one on the car for my aprs coverage experiments.

I wonder if there's a club for computer geeks like me who don't know when to stop? hehe Probably more like a support group. Step away from the computer Mr Coslo, just step away.....

Now you lost me!

If you're referring to the few folks who make some parts of the 'phone
bands rather nasty, consider the following:

1) Those folks aren't using Morse Code when they behave badly on the
air

2) Those folks also passed written exams that included lots of
questions about the rules & regs

No, not at all.

Suppose that in 1980 someone had developed a wonderful new way to learn
Morse Code that would take a typical person from 0 to 25 wpm in 1 hour,
simply by watching a videotape.

Do you think the code tests would still have been an issue?

> Entry level at the time meant simple equipment. Getting a CW transmitter

And was used by other radio services well into the 1990s. A lot depends
on what you consider "the early days".

> I just can't see inter agency communications between police, fire,
> medical and the Red Cross being handled by some guy wearing a celluloi
d
> eye shade, sleeve garters and hunched over a code key. *

Why not?

The FBI had their own HF nets using Morse Code. The military and
maritime folks used for many decades.

The main reason other services stopped using Morse Code was that they
didn't want to pay skilled operators. It was cheaper for them to buy
more-complex equipment.

But Amateur Radio is all about *operating*.

I'm certain that they would. All those that passed via that method of
learning would be scorned as "Drive-thru" Licensees. The standard
comments built on the "But 'real hams'" had to...." mindset.

[comment about the relevancy to this discussion is at the bottom.]

Prior to the Novice license, the easiest way to get on the air with a limited budget and skill set was to make a simple CW transmitter. Of course, to be able to use it, you're going to have to be able to send and receive Morse code, unless the only QSL cards you want to receive are from OO's and / or the FCC.

Yes, you could get your ticket, throw your key away and buy phone stuff but it was still easier to just get on the air with Morse code.

The Novice license was introduced as a way to get on the air with a limited skill set, and spend time ON THE AIR to give you the incentive to upgrade your skills with the promise of frequency agility and phone operation when you upgraded.

>> And as Jeff Davis said, Morse Code was the lingua franca of

I know, and the FAA still uses CW to ID beacons. But the write things like ".-.. .- -..-" on the maps right next to LAX rather than force pilots to learn Morse code.

And if I remember right, joining the military (as an example) didn't require you to learn code to use a rifle. If you wanted to learn code and get a different job, that was up to you.

The key word here is "had". The additional expenses in the design and deployment of the new equipment is there to remove the possibility of human error and make things simple enough for anyone to operate.

> But Amateur Radio is all about *operating*.

Operating is not all of it. Nor is operating via a specific mode.
If anything, it is all about communication and having the skill

set (both technical and operational) required to communicate in
the mode with which you are granted the right to use.

> Or what that has to do with the discussion.

My comments at the beginning of this discussion were specific to my
opinion that the requirements for joining the CWops club were
restrictive and elitist. With a tongue in cheek reference to the
Masonic Lodge with their secret handshakes and rituals along with
having to be vetted by existing members.

However, as I suspected, the discussion has drifted into the standard
"People that haven't had to learn code like *I* did, or "make the
effort" (as it is sometimes referred to) are somehow less than real
hams."

People should use Morse code as a mode of communicating because it is
a skill and one they should be proud of. NOT because it somehow makes
others less than them. The same could be said of those who chose to
use SSB, AM, PSK, RTTY, FM, EME, packet radio and so forth. But, oddly
you don't hear them talking down to everyone else that do not share
their enthusiasm for their preferred mode of communication.

+ HAMS IN THE NEWS: WHITE HOUSE NAMES HAM AS NEW CYBERSECURITY
COORDINATOR

On December 22, President Barack Obama named Howard A. Schmidt,
W7HAS, as the new White House Cybersecurity Coordinator. According to
the White House, Schmidt -- an ARRL member -- is one of the world's
leading authorities on computer security, with some 40 years of
experience in government, business and law enforcement and "will have
regular access to the President and serve as a key member of his
National Security Staff. He will also work closely with his economic
team to ensure that our cybersecurity efforts keep the Nation secure
and prosperous."

In an exclusive interview with the ARRL, Schmidt said that he credits
Amateur Radio with getting him involved with technology: "In high
school, one of my friends was a ham and he got me interested in
```

shortwave radio, which in turn got me into building shortwave radios and equipment, many from Heathkit. As I got older, I took courses from NRI and Bell and Howell in electronics and built a number of projects, preparing me for my first ham radio ticket. I love technology, and it was Amateur Radio that caused me to build my first computer -- a Sinclair ZX-80 to use for EME calculations. I studied all about the OSCAR systems and would build equipment to monitor when they would pass within range of Arizona. Building these computers to support my ham radio hobby gave me the technical skills that I needed to start doing computer crime investigations and work on the early stages of computer forensics, in turn enabling me to start working on cybersecurity issues." Read more here <http://www.arrl.org/news/stories/2009/12/23/11264/?nc=1>.

==> + SPOTLIGHT ON AMATEUR RADIO: 2009 SEES SURGE OF NEW AMATEUR RADIO LICENSEES

This past year was a banner year for new Amateur Radio licensees. According to ARRL VEC Manager Maria Somma, AB1FM, the FCC issued more than 30,000 new ham radio licenses. "In 2009, the demand for Amateur Radio exam sessions remained elevated and is still running at a higher rate than before the FCC's restructuring of the license requirements in 2007," Somma said. "This high level of exam session activity has produced an elevated influx of new applications, far outpacing recent years." A total of 30,144 new licenses were granted in 2009 -- an increase of almost 7.5 percent from 2008. In 2005, 16,368 new hams joined Amateur Radio's ranks; just five years later, that number had increased by almost 14,000 -- a whopping 84 percent! Read more here <http://www.arrl.org/news/stories/2010/01/06/11278/?nc=1>.

==> + PUBLIC SERVICE: MARS GETS NEW NAME AS IT FINE TUNES MISSION

On Wednesday, December 23, the Department of Defense (DoD) issued an Instruction concerning MARS, effective immediately. This Instruction gives the three MARS services -- Army, Air Force and Navy/Marine Corps -- a new focus on homeland security and a new name: Military Auxiliary Radio System. The Instruction is the first major revision to MARS since January 26, 1988 -- as such, the first revision since the 9/11 attacks and Hurricane Katrina, two major events that changed the way Amateur Radio dealt with emergency communications. In the past, MARS had focused primarily on emergency communications and health and welfare support. The DoD's Instruction now directs the three MARS services to provide "contingency radio communications" to support US government operations, DoD components and "civil authorities at all levels," providing for national security and emergency preparedness events. MARS units will still continue to provide health and welfare communications support "to military members, civilian employees and contractors of DoD Components, and civil agency employees and contractors, when in remote or isolated areas, in contingencies or whenever appropriate." MARS must also be capable of operation in "radio only" modes -- without landlines or the Internet -- and sustainable on emergency power (when public

utility power has failed); some MARS stations must be transportable for timely deployment. Read more here <http://www.arrl.org/news/stories/2009/12/24/11267/?nc=1>.

==> + COMING UP IN QST: LOOK FOR THE FEBRUARY ISSUE OF QST TO ARRIVE SOON

The February issue of QST <http://www.arrl.org/qst> is jam-packed with all sorts of news and information that today's Amateur Radio operator needs. From product reviews to experiments, from public service to on-the-air activities, the upcoming issue of QST has something for just about everyone. You'll find a plethora of technical and general interest articles, as well as monthly columns such as How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/01/05/11277/?nc=1> to discover what's in store for you in the February issue of QST, the official journal of the ARRL.

==> HINTS & KINKS : A BNC CONNECTOR TOOL

Scott McCann, W3MEO, of Queenstown, Maryland, made this tool by soldering a BNC connector to the shaft of an old screwdriver (see photo): "I cut off the blade and tinned the shaft with ordinary solder and flux. I then removed the center pin and Teflon from a BNC plug and soldered the plug onto the screwdriver shaft. While it was hot, I 'locked up' the nut and collar with solder. Now I have a BNC driver, very handy for installing and removing BNC jacks without marring them, which can happen using pliers or other 'make do' tools." Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint in QST, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, such as speaking with representatives of the FCC's five Commissioners concerning BPL, representing Amateur Radio at various meetings leading up to WRC-12, rolling out new platforms for the ARRL's Tech Q&A, processing certificates and endorsements for the Hiram Percy Maxim 140th Birthday Celebration and more. This installment covers the month of December. Read more here <http://www.arrl.org/news/features/2010/01/04/11274/?nc=1>.

==> + NOW YOU KNOW!: 4U1 CALL SIGNS

By ARRL News Editor S. Khrystyne Keane, K1SFA

This past weekend when I was working the ARRL RTTY Round-Up <http://www.arrl.org/contests/rules/2010/rtty.html>, I came across a call sign that I had never seen before. But that's not what confused me (as I become more active on the air, I run across all sorts of interesting call signs, such as 3V8ST). No, what confused me was that the supercheck database <http://www.supercheckpartial.com/> and my logging program <http://www.n1mm.com/> told me that the call sign was located in the US. We all know that AA-AL, K, N and W are all US prefixes. Then why was 4U1WB showing up as being located in the US, too?

Upon assurances I was not going crazy -- and more importantly that the supercheck database and my logger were not broken -- I found out that 4U1WB <http://www.qrz.com/db/4U1WB> is a United Nations call sign assigned to the World Bank Amateur Radio Club at the World Bank in Washington, DC. There are four 4U1 call signs around the globe: 4U1WB; 4U1UN <http://www.qrz.com/db/4u1un>, assigned to the United Nations; 4U1ITU <http://life.itu.ch/radioclub/>, assigned to the International Amateur Radio Club at the International Telecommunication Union, and 4U1VIC <http://www.qsl.net/4u1vic/>, assigned to the Vienna International Radio Club at the Vienna International Centre.

In the past, the United Nations has issued 4U call signs to various entities, allowing its use in areas where the UN has had peacekeeping forces. In 1995, an operation from Western Sahara used 4U/KC0PA, while Burundi used 4U9U in 1994.

While 4U1UN and 4U1ITU count for credit toward the ARRL's DXCC award, 4U1WB and 4U1VIC do not. The DXCC rules define 4U1WB and 4U1VIC as "ineligible areas." These areas are classified as "extraterritorial legal entit[ies] of any nature, including, but not limited to, embassies, consulates, monuments, offices of the United Nations agencies or related organizations, other inter-governmental organizations or diplomatic missions." This rule also clarifies that these two stations are considered part of their "host entity" for DXCC purposes. This makes 4U1WB part of the US and 4U1VIC part of Austria for DXCC purposes.

For more on 4U1UN, be sure to check out the February issue of QST. So now when you see or hear a call sign come across the ether to your radio with a 4U1 prefix, don't be alarmed when you find out that the call sign is based in the United States. Now you know!

==> SOLAR UPDATE

Tad "I yet have visions for the night <http://englishhistory.net/keats/poetry/odeonindolence.html>" Cook, K7RA, reports: Looking at sunspot numbers for the past few years, we can identify three bottoms by using our 3 month moving average -- October 2007 at 3, August 2008 at 1.1 and 1.5 in March 2009. Between each of these months, sunspot numbers rose and declined. Now the 3-month average centered on November 2009 is 10.163, the highest since August 2007's average at 10.17. Currently, the Sun is blank; this is

one of only two days without sunspots since December 9, but look for more sunspot activity soon. Look for more information in the Solar Update, available on the ARRL Web site on Friday, January 8. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Ode on Indolence <http://englishhistory.net/keats/poetry/odeonindolence.html>.

==> + VEC NEWS: NCVEC RELEASES NEW TECHNICIAN CLASS QUESTION POOL

The Question Pool Committee (QPC <http://www.ncvec.org/page.php?id=333>) of the National Conference of Volunteer Examiner Coordinators (NCVEC <http://www.ncvec.org/>) released the new Technician class (Element 2) question pool <http://www.ncvec.org/page.php?id=356> on Monday, January 4. This new question pool will become effective for all examinations administered on or after July 1, 2010; it will remain valid until June 30, 2014. The current Technician question pool that became effective July 1, 2006 will expire June 30, 2010. The new Technician pool contains approximately 400 questions, from which 35 are selected for an Element 2 examination; it will contain graphics and diagrams, something new for this element. The current General class question pool <http://www.ncvec.org/page.php?id=350> was effective July 1, 2007 and is valid through June 30, 2011. The current Amateur Extra class pool <http://www.ncvec.org/page.php?id=351> was effective July 1, 2008 and is valid until June 30, 2012.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=pz6aBjmFRRU> This week, there is a running of the NCCC Sprint on January 8. The Mongolian RTTY DX Contest and the Midwinter Contest (CW) are January 9. The Hunting Lions in the Air Contest, the Michigan QRP January CW Contest, the WW PMC Contest and the North American QSO Party (CW) are January 9-10. The SKCC Weekend Sprint and the Midwinter Contest (Phone) are both on January 10. Next week, there is another running of the NCCC Sprint on January 15. The Hungarian DX Contest and the North American QSO Party (SSB) are January 16-17. The Feld Hell Sprint is January 17, the Run for the Bacon QRP Contest is January 18 and the NAQCC Straight Key/Bug Sprint is January 21. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + ARRL RECOGNIZES: ROBERT H. WELSH, N3RW, WINS DECEMBER QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for December is Robert H. Welsh, N3RW, for his article "How the Ionosphere Was Discovered." Congratulations, Robert! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the January issue by Sunday, January 31.

==> + SILENT KEY: KNUT MAGNE HAUGLAND, LAST SURVIVING CREW MEMBER OF KON-TIKI EXPEDITION, PASSES AWAY

Knut Magne Haugland of Norway passed away on December 25. He was 92. Haugland was one of five men, who with Thor Heyerdahl in 1947, successfully crossed the Pacific Ocean in a 45 foot raft made of balsa wood and bamboo -- named Kon-Tiki -- to prove that people from South America could have settled Polynesia in pre-Columbian times. Heyerdahl and his companions sailed the raft for 101 days more than 4300 miles across the Pacific Ocean before smashing into a reef in the Tuamotu Islands on August 7, 1947. The expedition used call sign LI2B and carried three watertight radio transmitters. The first operated on the 40 and 20 meters, the second on 10 meters and the third on 6 meters. Each unit was made up entirely of 2E30 vacuum tubes providing 10 W of RF input. As an emergency backup, they also carried a German Mark V transceiver originally re-created by Britain's Special Operations Executive in 1942. Other equipment included a hand-cranked emergency set of the Gibson Girl type for use on the maritime bands, a special VHF set for contacting aircraft and two British Mark II transmitters. The Kon-Tiki also carried a National Radio Company NC-173 receiver. Dry batteries and a hand-cranked generator supplied the power. Read more here <http://www.arrl.org/news/stories/2009/12/28/11269/?nc=1>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, January 24, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, February 10, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1691 - January 8, 2010

The following is a closed circuit and not necessarily for air. With an update on amateur Radio Newsline's finances, here's our producer Bill Pasternak, WA6ITF:

--

OK. Ill try to be brief. Its January, We've paid about half of the December bills and we have no funds to pay the rest. About $74 in the bank right now. Simply said, we need your financial support to keep Newsline coming your way. The easy way to donate is by Pay-Pal at www.arnewsline.org. Our new mailing address will be at the end of this weeks report. We sincerely thank your for your ongoing support. And there, I kept it as brief as I could.

Jim.

--

Thank you Bill. Now, Amateur Radio Newsline report number 1691 with a release date of Friday, January 8, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Putting a new repeater on the air in the U-K may soon get a lot harder to do; a possible way that the United States might inventory all of its spectrum; South Africa's SumbandillaSat goes to QRP operation and a 102 year old Canadian ham is back on the year after being off for the past two decades. Find out whom she is and who provided the gear on Amateur Radio Newsline(tm) report number 1691 coming your way right now.

(Billboard Cart Here)

SPECTRUM IN TRANSITION: REPEATERS IN THE UK WARNED TO USE IT OR LOOSE IT

The world-wide spectrum crunch is becoming a major concern to hams in the United Kingdom. That's where putting up and maintaining a repeater may soon become more complex as an item posted on the website of the RSGB Emerging Technology Co-ordination Committee indicates that the criteria for processing repeater applications will be tightened. It could also impact negatively on both the owners and users of current UK systems on 70 centimeters and above. Frank Haas, KB4T, has the details:

--

Published on January 3rd, the article titled "Taking Stock" says that it is likely that strict criteria will be applied in the new year for new United Kingdom repeater applications. It says that against the backdrop of low activity levels, and poorly performing repeaters, the need to justify new applications is likely to be enforced to a far greater extent.

The article also includes a warning to those system operators whose currently operational repeaters have failed to meet the current criteria. It says that long-term non-operational repeaters, repeaters licensed but failing to ever begin service and repeaters nominally operational but widely reported as being either deaf or inaccessible for other reasons has become all too prevalent. In simple United States terms, the adage "use it or loose it" would likely be apropos and be applied.

Along those lines the article post goes on to state that the recent interest in digital modes has been a welcome boost to the repeater sector of the hobby. But it notes that challenges to amateur use of bands above 2 Meters is likely to require even greater proof that hams need and value these bands. This, to support their society in fending off commercial interest at 70centimeters and above.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

The article ends by noting that the focus on radio spectrum in the UK is going to intensify in the coming decade. It says that radio amateurs in that nation have to be seen as having their house in order and make good use of the valuable spectrum at their disposal in the so called "sweet-spot" of the radio bands.

(From http://www.ukrepeater.net/ via Southgate)

**

SPECTRUM IN TRANSITION: ONE POSSIBLE WAY TO CONDUCT A SPECTRUM INVENTORY

A follow-up on last weeks story concerning the likelihood of a congressionally mandated inventory of the entire electromagnetic spectrum. This, to ascertain what might be available for transfer to wireless broadband.

>From the e-mail we have received, there are a lot of questions as to how such an inventory would be accomplished. There are many ways and with one possible and probable answer here's Amateur Radio Newsline's Norm Seeley, KI7UP:

--

If the spectrum inventory process is conducted in the same way as has been other government mandated surveys, it will not be a true census or head count. Rather, it will likely be based on data already in the

government's possession and that which it can obtain, rather than actual "monitoring" of all of the spectrum from DC to light and beyond. The government already has a pretty good idea of whom is on the air and where they are operating. This is because the FCC is mandated to keep accurate records of whom it licenses and to what spectrum a given licensee is assigned. At least the initial count would be whom the FCC has "licensed" to operate on a given frequency or in a given frequency band. As such, it can only be as accurate as the FCC database and not truly indicative of whom is on what spectral parcel at what time.

More accurate would be the tally of frequency usage by the government itself as maintained by the National Telecommunications and Information Agency's Office of Spectrum Management. The Office of Spectrum Management or O-S-M is responsible for managing the Federal Government's use of the radio frequency spectrum is kind of an FCC for the government itself.

If the inventory is accomplished based on records of what civil and government operations use a given frequency or band of frequencies, then for ham radio bands its all but impossible to know exactly whom is active and where he or she is operating. This is because our licenses permit not only bands of frequencies, but we choose the spot in a given band on which we operate. This as opposed to most other services that have specific "frequency assignments" or "channels." The best that can happen in ham radio is a very, very rough estimate of whom might be on a given amateur radio band but not a true count of actual activity. This is especially true as you hit the amateur radio allocations at 1 point 2 Gigahertz and above.

All this said, what you are not likely to see is banks of technicians sitting in front of manually operated or even computer controlled receivers and scanners at monitoring centers or in vehicles roaming the nation and counting signals. Even with the most modern automated receiving gear, such an actual headcount could take years. And as we have already reported, Representative Rick Boucher of Virginia who is sponsoring the measure that would mandate such a government inventory of the airwaves says it needs to be completed as quickly as is possible.

So it is more likely to be accomplished empirically rather than as a finite head count of whom is on the air at the moment in time a given frequency is looked at in Seattle, Des Moines, New York or anyplace in the nation. That includes here in Scottsdale, Arizona, where I'm Norm Seeley, KI7UP, reporting for the Amateur Radio Newsline.

--

The bottom line: If a complete spectrum tally is conducted it is likely to be more of a paper inventory rather than a true physical head count. That said, it will be interesting to learn the actual method to be used. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SUMBANDILLASAT POWER OUT REDUCED

SumbandilaSat has gone to a QRP power level. In order to conserve power for other operations on the new SO-67 South African SumbandilaSat ham radio satellite, ground control team have reduced the power of the transponder carrying amateur radio to 2 and 1/2 watts.

Initial reports from stations in Australia indicate that the reduction is hardly noticeable and that the signals remain stronger than most other amateur radio satellites. Availability of the ZS0SUM payload will be during daylight hours when the satellite is in full sunlight. The actual schedule is published on-line at www.amsatsa.org.za. We will have more ham radio space related news later on in this weeks newscast. (SA-AMSAT)

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N5IUF repeater serving Dallas Texas.

HELPING HAMS: VE3 GROUP BRINGS 102 YEAR OLD OPERATOR BACK ON THE AIR

A 102 year old ham is back on the air after being QRT the past two decades. This, thanks to the generosity of a Canadian ham radio association that helps those in need.

Ethel Williamson, VE3DTW, is a former lighthouse keeper who turns 103 in March. She had been off the air for at least 20 years when the Welland branch of the Handy Ham Amateur Radio Club of Canada herd about her. The organization offered to set up a radio for her at Niagara Ina Grafton Gage Village long-term-care home so she could get back on the air. She accepted their suggestion and it all came to fruition on Monday, January 4th. That's when she made her first QSO with a station in Melbourne, Australia, via a local repeater tied to VK land using IRLP.

Ethel Williamson became a ham after the Second World War when she and her late husband, Cyril, raised their sons, Doug and Bruce, while running the Port Weller lighthouse. The couple lived at the landmark overlooking the lake for 25 years. Now she lives in the long term care facility but thanks to ham radio her voice is once again be heard, worldwide. More about this amazing lady can be found at

http://wellandtribune.ca/ArticleDisplay.aspx?e"46214 (Welland Tribune OnLine)

**

RESCUE RADIO: MALAYSIA RED CRESCENT FORMS AMATEUR BASED RESCUE RADIO SERVICE

The Malaysia Red Crescent Society's Johor branch has launched that nations first ham radio based rescue radio service. One that will focus on swift communication to help victims in time of disaster.

The new response group is called Disaster Communication Amateur Radio. The State Red Crescent Society chairman who launched the service said that it was a way to prepare for quick action during natural emergencies and other events where a swift communications response is required.

According to the chairman ten Malaysia Red Crescent Society members are already qualified to use the new radio service. Another fifty-six from the Northern Region Malay Amateur Radio Association have signed up to become Red Crescent members as well. If a disaster scenario strikes, they will relay information to the headquarters which will in turn inform relevant agencies for further action. (Malaysian Red Crescent release)

**

HAM TESTING: NCVEC RELEASES NEW TECH QUESTION POOL

Some new questions and some new answers. This as the National Conference of Volunteer Examiner Coordinators Question Pool Committee released the new Technician class Element 2 question pool on Monday, January 4th.

The new Technician pool contains approximately 400 questions, from which 35 are to selected for an Element 2 examination. The current Technician question pool became effective July 1, 2006 and will go out of service this after June 30th.

This new question pool will become effective for all Technician class examinations administered on or after this coming July 1st and will remain valid until June 30, 2014. (NCVEC)

**

RADIO EDUCATION: THE FOUNDATION FOR AMATEUR RADIO 2010 - 2011 SCHOLARSHIPS

Its January and it's the time when the Foundation for Amateur Radio puts out word that it plans to administer forty eight scholarships for the 2010 through 2011 academic year. This, to assist licensed radio amateurs in the pursuit of higher education.

The Foundation fully funds two of these scholarships. The remainder are administered by the Foundation, without cost for various donors. All licensed radio amateurs may compete for these awards but they must be planning to pursue a full time course of studies beyond high school and be enrolled, or have been accepted for enrollment, at an accredited university, college or technical school.

The awards range from $5,000 to $500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Non-US residents are eligible to apply for some of the scholarships.

Additional information and an application form may be requested by letter or QSL card, postmarked prior to January 31, 2010 from FAR Scholarships, Post Office Box 911, Columbia, Maryland 21044. Applications are also available for download from www.farweb.org. (FAR)

**

RECOMMENDED READING: "THUNDERSTRUCK BY ERIK LARSON

"Thunderstruck" is a book by Erik Larson that is a true story that interweaves notable researchers and inventors like Guglielmo Marconi, John Fleming, Heinrich Hertz, and Nikola Tesla with that of Dr. Hawley Crippen, a famous murderer.

Crippen, was an American physician hanged in Pentonville Prison, London, England, on November 23, 1910, for the murder of his wife, Cora Henrietta Crippen. He holds the unenviable distinction of being the first criminal ever to be captured with the aid of wireless communication.

As you might surmise, the story takes place between the late 1800's and the early 1900's and is historically accurate . This is especially true in its treatment of how Marconi became a major "mover and shaker" of his day accompanied by the obstacles that go with success.

Any ham that is a reader should enjoy this book. According to the QCWA's Val Erwin, W5PUT, once he started reading, he could not put it down.

"Thunderstruck" is available either in hardback or paperback at all normal book outlets and from on-line booksellers like Amazon dot com. (W5PUT)

**

RADIO BUSINESS: COMMEMORATIVE PK-232 25th ANNIVERSARY SOFTWARE CD FROM CSS

Creative Services Software has announced that the pre-order period is open for its PK-232 25th Anniversary Collectable Compact Disc. This is a limited edition CD that includes such well known programs as PakRatt for DOS, PkFax for DOS, PakRatt Lite, Pkterm 99 and many others. Also included are manuals for all the programs in .PDF file format so that those that have lost their manuals can print them out again. More information on this CD is available at www dot cssincorp dot com. (CSS Release)

**

ON THE AIR: THE NEW CW OPERATORS CLUB

The CW Operators' Club or CWops is a newly formed club aimed at encouraging the use of Morse in amateur radio communications, and to promote goodwill among radio amateurs around the world.

CWops is international in scope, membership and management. Its focus is the use of CW, whether for contesting, DXing or ragchewing.

More information on this new pro Morse organization is on-line at www.cwops.org. (N3JT, Southgate)

HAM RADIO BUSINESS: FRENCH RADIOCOM.ORG SHUTS DOWN

The French ham radio website radiocom.org is going Q-R-T after 10 years on the World-Wide-Web. Editor Francis Roch, F6AIU, says that a combination of the long hours that must be devoted to operating the website along with receiving little assistance from the European ham community have lead to the decision to close down effective January 1st. An editorial giving more information on the decision to shut down, writer in French is at the website at www.radiocom.org (Southgate, F8KBL)

NAMES IN THE NEWS: KB1SF NAMED INTERIM AMSAT-NA TREASURER

Some names in the news. First up is former AMSAT North America President Keith Baker, KB1SF, who has been appointed as interim AMSAT Treasurer until the Board of Directors can name a permanent replacement for Gunther Meisse, W8GSM.

Keith Baker, KB1SF, appointment was made by AMSAT President Barry Baines, WD4ASW. As many of you will likely remember, Baker served AMSAT throughout the 1990's and early 2000's both as a Board of Directors member as well as Executive Vice President. This, before taking a turn

as President from 1998 until 2000.

It is expected that the AMSAT North America Board of Directors will meet in early January via teleconference to formally elect Keith to fulfill the current Treasurers term that expires in October of this year. (AMSAT-NA)

**

NAMES IN THE NEWS: NEW ZEALAND DX HALL OF FAME INDUCTEES FOR 2010

The New Zealand DX Hall of Fame has announced the election of three new members to that prestigious body. This years inductees include Dave Johnston ZL1AMN, Aola Johnston ZL1ALE and the late Dave Brown, ZL1HY. All three are being honored for their contributions to the art of DX'ing. The New Zealand DX Hall of Fame was established several years ago celebrate the achievements those outstanding Zed-L radio amateurs who have excelled in the radiosport aspect of the hobby over many years. (ZL2AL)

**

NAMES IN THE NEWS: CQ COLUMNIST DAVE INGRAM, K4TWJ, HOSPITALIZED

And a speedy recovery wish to CQ Magazine columnist Dave Ingram, K4TWJ. Dave is currently in a Birmingham, Alabama, hospital recovering from a heart attack he suffered on Thursday December 31st. He was initially treated with an emergency angioplasty to open three completely closed coronary arteries and reported to be improving. Get well cards and letters should be sent to K4TWJ at his callbook address. (ARNewsline(tm))

THE CHANGING OF THE GUARD: REPEATER PIONEER GEORGE LeDOUX, K1TKJ - S.K.

It is estimated that the median age of amateur operators is now 60+. So, it is no surprise that the monthly list of Silent Keys continues to grow. Each of those hams undoubtedly deserves a special note. However, it is with a lot of personal sorrow that I tell you of the passing of one of ham radio's legendary repeater pioneers. George LeDoux, K1TKJ of Modesto, California.

Originally from Litchfield, Connecticut, in the late 60's, George became transmitter supervisor for the New York City Spanish language TV station WXTV with it's tower located atop the 55 story City Service building at 70 Pine Street in midtown Manhattan. George was an early adopter of 2 meter FM and viewed the opportunity to build a repeater in the nations largest city at 500 feet in the air as irresistible. And so, the WA2SUR repeater became a reality.

George didn't invent repeaters. That was accomplished by the late Arthur M. Gentry, W6MEP, almost a decade earlier. What George did was to bring them from mere signal repeating devices to the level of early ham radio social networking on 2 meters. A place where a ham could go to forget for a while life's day to day drudgery. And his WA2SUR repeater was among the first if not the very first to adopt this "lets have fun attitude". Soon, the "Sewer" as it became known, had over 500 active amateurs and wide coverage throughout New York, Connecticut and New Jersey. However, it was affable George LeDoux's personality that spearheaded what became a social group of repeater users' rarely paralleled before or since.

If you ventured onto 2 meters in the late 1960's and lived anywhere within 100 miles or so of Manhattan, then you quickly found WA2SUR and bought a set of crystals to get on that fun meeting place. While most other systems prided themselves on emergency preparedness or the distance they could cover, in the case of WA2SUR, the pride for K1TKJ was in knowing he had created a place in ham radio for folks to just have fun.

And have fun they did. Not only were their multiple layers of conversations 24 hours a day, but also picnics, parties, dinner gatherings and the like. And George oversaw it all from his perch atop 70 Pine Street in New York City and from where his voice could be heard daily, usually laughingly saying what became his well known fun signature line of: "Shut up. Shut up. Get off my frequency." If George hurled that barb your way, you knew that you had been accepted as a member of the WA2SUR family.

After leaving WXTV George moved west to California where he became the Chief Engineer of another television station. In April of 1984 he began an in house manufacturing operation for the station to supply its own needs for a new UHF transmitter.

It was a good design and word spread. Soon that station was building two, and then three transmitters with George's highly efficient design. After satisfying their own needs and the needs of the other stations, George's employer decided to stick to broadcasting and to get out of the manufacturing business. A deal was struck in which the assets were transferred and Astre Systems Inc. which was formed in July of 1986 with George LeDoux, K1TKJ, as its president.

At the time of his passing he was upgrading the modulators and transmitter control circuitry for the 14 one hundred thousand watt transmitters at shortwave station WYFR in Okeechobee, Florida owned by

Family Radio. Because of this, K1TKJ was making frequent trips to Florida and to his suppliers to build his custom made boards.

On Sunday morning, December 28th, he was about to board a plane in San Francisco to Salt Lake City to investigate delays from one of his suppliers. He was in the waiting area at the airport when he suffered shortness of breath. Others in the waiting area tried to calm him, but soon, he fell into unconsciousness and was not able to be revived.

George LeDoux, K1TKJ, is survived by his wife Cindy and 5 grown children. His son George was a partner in the Astre Systems business. A memorial service was held on Friday, January 8th at Grace Lutheran Church in Modesto.

Ironically, George's daughter Christine LeDoux is a world renowned Country Folk singer and had written several songs about her dad including a somewhat prophetic one about his failing heart called "Angel you've come too soon".

George LeDoux, K1TKJ will be missed by many of us such as myself who knew him well.

73 my good friend. (W2JKD, ARNewsline(tm))

EMERGING TECHNOLOGY: FUEL CELL POWERED MOBILES MAY BE HERE SOON

A new way to get around may one day have an impact on the way we hams operate mobile in motion. Don Wilbanks, AE5DW, reports on an emerging technology called the FCV:

--

Fuel Cell powered vehicles or FCV's are expected to be a technology that could revolutionize road transportation and possibly the way hams operate mobile in the coming years.

FCV's are normally powered by pure hydrogen gas onboard in high-pressure tanks, but some can also be used with hydrogen rich fuels such as methanol, natural gas or even gasoline. Previously, FCV's only worked efficiently in warm weather, but this latest technology permits operation at temperatures as low as minus 13 degrees Fahrenheit. This should make the concept accessible for almost everyone anywhere.

So far Fuel Cell powered vehicles only have a maximum range of about 250 miles, but that's more than enough for most everyday shopping or job commutes. And FCV technology improves so should the distance these vehicles can travel before refills.

I'm Don Wilbanks, AE5DW.

--

This emerging technology also has the potential to significantly reduce energy use and harmful emissions, as well as our dependence on foreign oil. And being far electrically quieter than todays cars and light trucks means better signal reception when operating on the road. (Technology Today)

Just my 2 c worth: back when I first started in ham early 70's, there were a lot of fast cw ops on the air, and the *average* speed of ops was quite a bit higher than the *average* today. Back then, 30 wpm was not the rarity it is today, and you could even hear the occasional 40 and 50 wpm ops. This latter is almost never heard today.

So...I think a club dedicated to fast cw sending/receiving is not necessarily a bad thing. I have admiration for anyone who does a thing competently. Maybe it will inspire others to increase their competence. If so, not a bad thing at all.

I've used the "MorseKOB" system, and it _does_ provide "wires" where
users may use Morse in real time. It requires a central server, and the
code might need modification for Continental code (talk to N7RZ), but
the basics are all there.

Until 1990, any US ham you heard heard on CW on the non-novice HF amateur bands bands had passed at least 10 wpm and most had passed 13 wpm. Any US ham you heard on the Extra parts of the bands had passed 20 wpm. That meant you'd rarely hear anything slower. The Novice bands were the exception that prived the rule

But with medical waivers in 1990, the reduction to 5 wpm for all classes in 2000, the change in CW privileges for Novices and Tech Pluses and the elimination of the code test in 2007, it's not a surprise that the *average* speed would be lower, or at least seem that way.

> Back then, 30 wpm was not the rarity it

With all due respect, I think it depends when and where you listen. There are still more than a few who can really pour on the coal.

Of course someone who calls CQ at 45 wpm isn't going to get as many replies as someone who calls at 25 wpm.

On Field Day we run CQs at about 27-30 wpm and we're not as fast as many who answer. SS is about the same. The DX contesters tend to go faster.

I agree 100%! There's nothing quite like a good CW ragchew when you slide the weights in and let 'er rip. Just like talking - easier, in fact, once you have the skills. With good QSK, it's a two-way real-time conversation. (Other HF modes can't do QSK)

Worked an OE1 on 7012 earlier this evening. 599 and he was really sailing along.

I don't think "Morse code makes you a better person" was their *whole*
argument.

Let me put it another way:

There's no single one-time test that will absolutely guarantee that
everyone who passes it will be a well-behaved, law-abiding amateur
radio operator. Some bad apples will always squeak through. We see this
in professions and other walks of life that have much more
rigorous admission requirements.

But that doesn't mean testing and other license requirements have no
effect! IOW, just because a test isn't an absolutely perfect filter
doesn't mean it has no effect at all and should be removed.

Perhaps I should have worded that differently. What I meant was, do you
think there would have been any real effort to get rid of them? I
don't.

> All those that passed via that method of

Agreed!

> Yes, you could get your ticket, throw your key away and buy phone stuff
> but it was still easier to just get on the air with Morse code.

"Easier" in the sense that you could do more with simple, inexpensive
HF equipment.

> The Novice license was introduced as a way to get on the air with a
> limited skill set, and spend time ON THE AIR to give you the incentive
> to upgrade your skills with the promise of frequency agility and phone
> operation when you upgraded.

Before 1951, the "standard" US amateur licenses were the Class B and C,
which became the General and Conditional. The Novice was meant as a
sort of "learner's permit" so that new hams could learn-by-doing rather
than having to go straight to 13 wpm code and the General written exam
just to get started. That's why the license wasn't renewable and had a
shorter term.

> >> And as Jeff Davis said, Morse Code was the lingua franca of

What I meant is that the use of Morse Code for communication by other
radio services continued well into the 1990s.

> And if I remember right, joining the military (as an example) didn't

> human error and make things simple enough for anyone to operate.

Human error is still possible; in fact, it may be more possible if
anyone is allowed to operate.

The big issue IMHO was and is co$t. Skilled personnel cost more than
the equipment that replaced them. Heck, way back in 1912, most ships
with wireless only carried one operator. The Titanic, largest ship in
the world at the time, carried only two. The reason was cost, nothing
more; it took a disaster and regulations to force the shipping
companies to man the wireless 24/7.
>
> > But Amateur Radio is all about *operating*.
>
> Operating is not all of it.

Agreed. But operating is what you need a license for. A non-amateur
can do almost everything else.

> Nor is operating via a specific mode.

Or with a specific technology, or on a specific band.

> If anything, it is all about communication and having the skill
> set (both technical and operational) required to communicate in
> the mode with which you are granted the right to use.

Exactly! And since Morse Code is one of those modes...

> > Or what that has to do with the discussion.
>

Well, we could apply for a grant from the Ministry of Silly Walks...
>
> However, as I suspected, the discussion has drifted into the standard
> "People that haven't had to learn code like *I* did, or "make the
> effort" (as it is sometimes referred to) are somehow less than real
> hams."

I don't see where I wrote anything like that.

Pointing out that the requirements are different now isn't saying that.
I have met many amateurs who are completely unaware of the history and
changes in Amateur Radio that led to the present system.

For example, I have met many amateurs who thought that, before
"incentive licensing", all US amateurs witha General or higher had all
privileges, dating back to the beginning of licensing. Every one was
surprised to learn that such was not the case before 1953.

> People should use Morse code as a mode of communicating because it is
> a skill and one they should be proud of. NOT because it somehow makes
> others less than them.

Agreed!

But at the same time, it isn't wrong to have skills, use them, promote
them, and be proud of them.

> The same could be said of those who chose to
> use SSB, AM, PSK, RTTY, FM, EME, packet radio and so forth. But, oddly
> you don't hear them talking down to everyone else that do not share
> their enthusiasm for their preferred mode of communication.

I have heard and seen folks who use SSB refer to AM as "ancient
modulation"

I have heard and seen folks who use AM refer to SSB as "Donald Duck", "slop-bucket" and other terms

I have heard and seen all sorts of derogatory terms used for those who use and promote the use of Morse Code by those who don't use the mode.

There are lots of other examples. "Life's too short for QRP", is one - how is a QRPer supposed to take that?

Not by all - just by some. I don't think that all should be blamed for the actions of a few.

This is irrelevant to the subject at hand, namely "CW Clubs." Non-amateur radio services aren't involved.

As to a typical non-amateur-communications service, an old Teletype Corporation teleprinter cost less than a quarter of the annual salary of a skilled morse code specialist and had a service life of at least 10 years. That was before WWII...but it applied just after WWII as well.

>

Curiosity compells a mention that William G. Pierpont, N0HFF, did not have but a General class license when it expired (officially) in 2006.

If "Amateur Radio is all about 'operating,' then why are there any technical questions in the written test elements for a USA amateur radio license?

That is - most unfortunately - true. I was reminded again of my
"license gotten by sending in some cereal box tops" this morning. Once
I had accomplished my morning communication, I just shut down. Nobody
needs that sort of attitude.

Or, at least in the last decade, legally take all tests in one test
session and get the "highest" class license. <shrug>

> I know, and the FAA still uses CW to ID beacons. But the write things

I passed my FAA general aviation written test in 1964 at VNY. There was
no question on that test in regards to any morse code. Back then the
standard method of radionavigation was by VOR (Vhf Omnidirection radio
Range) that did not use a precise singular azimuth of the pre-WWII "A-N"

beacons that were the cause of many early aircraft missed-navigation errors. One can rather easily triangulate a position over the ground using just the bearing information from two VORs. That is still there today.

> And if I remember right, joining the military (as an example) didn't

Well, as a vountary enlistee in the U.S. Army in 1952, we didn't have much choice at all as to assignment. Also we ALL HAD to know how to "use a rifle." Period. All.

Absolutely true! I could expound on that from personal experience but that would probably be deleted...as has happened before. :-)

> However, as I suspected, the discussion has drifted into the standard
> "People that haven't had to learn code like *I* did, or "make the

That is endemic in USA amateur radio. Unfortunate for the radio service and trying to bring in anyone. My first exposure to the BIG World of radio came in early 1953 (56 7/8 years ago, give or take). I only pull out that factoid to show where I'm coming from, not to say I'm "better than anyone." :-)

I've discovered that nothing of my exposure or experience is "good enough" for amateur radio or their long-timers. ??? :-)

This is a little like saying that the reason commercial shipping moved
from wind power to engines is that they could have a smaller crew. Cost
is only a minor part of why commercial communications services stopped
using cw.

Technology moves forward. That TTY teleprinter might cost less than a
skilled Morse operator, but more important is that it does the job
better. If you're running a commercial service and you're being paid
real money to move message traffic, you invest in the latest technology
to do it because that's the overall most efficient way to get the job done.

While I'm nostalgic about the end of cw in the world of commercial
radio, that has nothing to do with my feeling about its use in ham
radio. One of the things hobbyists do is maintain expertise in skills
that might otherwise be lost forever. I enjoy the mode, and it still
has plenty of application in my hobby.

If others don't enjoy it, fine. I don't enjoy EME, and I feel myself no
less a ham for that. I'm not going to denigrate my fellow ham because
they don't care to operate a mode that I happen to enjoy.

I don't think it's odd, but that's just me. If somebody wants to know my Morse Code skills, I can tell them. If that's not enough, I can show them.

Here's an analogy:

I just came in from a morning run. Not to far and not too fast but definitely running. It's in the twenties here but the sun is out, the roads are clear of yesterday's snow and the wind isn't too bad. What we used to call "sweater weather" in western New York State.

There are all sorts of running/jogging clubs and organizations today, with a wide range of membership requirements. Some are mostly social, some are general purpose, some focus on competition, some are strictly about track, cross-country, road racing, etc. All are involved in some way in promoting running in various forms.

Suppose a club were to form which focused on long distance running, defined as those who routinely do runs longer than 13.1 miles (half-marathon and up). Maybe they toss in requirements of having completed at least one TAC-certified marathon "or equivalent".

Obviously a lot of people who run couldn't join unless they seriously upped their distance. The membership would be relatively small, but focused on a specific kind of running.

Seems to me that such a club could and would promote running, particularly long-distance running. I don't see how that would be a bad thing.

The new Morse Code club described is similar, IMHO.

One thing I have observed among amateurs actually *using* Morse Code is the friendship and comaraderie (sp?) and general welcoming. I don't hear the put-downs and such that are claimed by others - not on the air, anyway. Young or old, newcomer or OT, fast or slow, QRP or high power, it doesn't make any difference.

The one thing that *does* make a difference among the Morse-Code-using ops I encounter is consideration and operating skill. Meaning things like not calling the DX on his frequency when he's working split, not sending faster than you can receive, having a decent quality signal, etc. An operator cannot buy those things.

That's one of the things that hooked me on Morse Code more than 42 years ago, and keeps me coming back.

That was part of the reason. But the biggest reason was cost, of which
crew cost is a factor.

> Cost
> is only a minor part of why commercial communications services stopped
> using cw.

I think it was a major reason - perhaps *the* major reason, in many
cases.

> Technology moves forward. That TTY teleprinter might cost less t
han a
> skilled Morse operator, but more important is that it does the job
> better.

That depends on how you define "better".

Lower cost is one way. A big factor in for-profit companies.

Speed is another, often because "time is money".

The nature of the communications operation is another. For example, if
a message needs to be repeated several times, the use of Morse
operators can mean each one has to receive and then re-send the
message. With teleprinters and tape perforators, a tape can be cut and
sent later. If a message is sent from one location to many, all the
receiving Morse operators can be replaced by teleprinters.

OTOH, electromechanical RTTY equipment was extremely expensive,
complex, large, heavy, noisy and power-hungry compared to typical Morse
Code equipment. It required maintenance, repair and supplies,
and was not 100% error-free.

>If you're running a commercial service and you're being paid
> real money to move message traffic, you invest in the latest technology
> to do it because that's the overall most efficient way to get the job don
e.

Sometimes. The latest technology isn't always the overall most
efficient way.

But those are all details. The main reason is simply the overall
cost.

> While I'm nostalgic about the end of cw in the world of commercial

till
> has plenty of application in my hobby.

Agreed, but there's more to it.

Unlike commercial services, amateurs are almost all self-funded, self-trained and unpaid. Most amateurs don't have large amounts of time-sensitive communications to get from A to B (and maybe C, D, E, etc.) Things like size, weight, cost, power consumption, complexity, etc., can be major factors to the amateur.

Since RTTY seems to be the subject, recall that amateurs have been using RTTY since at least 1948. Within a few years some amateurs had fairly sophisticated RTTY setups, often homebrewed from WW2 surplus. For example, see QST for January, 1960, where W0LQV/AF0LQV describes a home-made RTTY TU built around a BC-453.

And well I remember K3RTR's RTTY setup, and the station we had at the University.

But for many amateurs RTTY didn't do the job "better". A teleprinter cost thousands of dollars new - almost all amateurs used surplus machines, often obtained through MARS channels. They required paper, inked ribbons and oil, and not just any would do. Worst of all, they required additional electronics and a higher-quality receiver and transmitter.

For many non-amateur applications, these weren't big factors. The cost of an R-390A receiver and CV-57/URR TU to go on a battleship weren't showstoppers for, say, the US Navy. John Q. Hamm has somewhat more limited resources, and expecting all amateurs to follow the practices of non-amateur services with much greater resources isn't realistic.

> If others don't enjoy it, fine. ?I don't enjoy EME, and I feel my
self no
> less a ham for that.

Funny you should mention EME.

The US Army Signal Corps did moon-radar experiments as early as 1946 and there was a military EME communications system in operation by 1960 or 61. (Once again, the resources available were somewhat more than the average amateur has). But the military soon abandoned the whole EME idea, replacing it with satellites. I don't think any other radio service uses EME, and most never even tried. (btw, a lot of the people involved in the 1946 moon-radar were hams).

Yet amateurs continue to pursue EME, right now, today. Yes, there's no separate EME test, but there are a significant number of EME questions

on the license exams.

>&#65533;I'm not going to denigrate my fellow ham because
> they don't care to operate a mode that I happen to enjoy.

Of course not - but that door swings both ways.

Source record: 1667

Knut Haugland, the last surviving crew member of the 1947 Kon-Tiki expedition, passed away recently at the age of 92. There's a pretty good story on the ARRL website:

http://www.arrl.org/news/stories/2009/12/28/11269/?nc=1

He was one of the radio operators (the other was Torstein Raaby) and they maintained contact with the world under some rather difficult conditions. Their exploits as behind-the-lines radio operators in WW2 are amazing as well, and some of them are told in the book and the ARRL article.

I first read the book "Kon-Tiki" way back in the 1960s, even before I was a ham. (The book's author, and leader of the expedition, was Thor Heyerdahl, whose grandson repeated the voyage in 2006).

I think it's a fascinating mixture of science, culture, speculation and adventure. I still have the book, none the worse for wear after all these years. Re-reading it now for the umpteenth time; still a good story. For about 10-15 years back at the end of the 20th century I had two NC-173 receivers (one was a parts unit) - it was the receiver they used on the expedition.

Maybe it's a result of being a bit older but different things from the book impress me now. There's the fact that none of the crew were sailors, for one thing. Another was how fast the whole thing came together; WW2 officially ended in September 1945, yet in a little over 18 months they were setting out. Mighty fast when you consider how different transportation and communication were back then.

Of course as a radio amateur that angle is the primary draw. I think those parts alone make it a worthwhile read for hams.

The FCC specifically defines the amateur radio service as being unpaid
("without pecuniary interest" in more legalistic terms).

Your statement about "time-sensitive communications" is unclear.

Big-time amateur contesters sometimes spend $10,000 to $20,000 total for
a large tower and beam antennas for HF. That would buy 5 to 10 Model 28
8-level TTYs new from Teletype Corporation.

>Since RTTY seems to be the subject, recall that amateurs have been
>using RTTY since at least 1948.

Various teleprinter signals were transmitted by radio in 1928 in other
radio services.

>But for many amateurs RTTY didn't do the job "better". A teleprinter
>cost thousands of dollars new - almost all amateurs used surplus
>machines, often obtained through MARS channels. They required paper,

"Additional electronics" consisted only of two subsystems, an FM
demodulator and an interface driver for the TTY loop circuits (60 mA
maximum if memory is correct). That commercial or military equipment is
built for very long 24/7 life is a requirement there. That is not a
requirement for amateur operation.

To properly use an NTS CW message delivery requires the official ARRL
Radiogram form, inked ribbons for the typewriter, oil for the
typewriter, perhaps an eyeshade and sleeve garters...:-) <shrug>

>The US Army Signal Corps did moon-radar experiments as early as 1946

Successful experiment. Done as "Project Diana"...in one of the three laboratories just outside of Fort Monmouth, NJ. I saw all three labs in 1952 while assigned to the Fort Monmouth Signal School.

>and there was a military EME communications system in operation by 1960
>or 61.

I was unaware of that. In that time-frame, the US Army was engaged in trying out Troposcatter methods for the end purpose of making specifications for contract bidding on Troposcatter using low microwaves. Troposcatter uses literal scattering of radio waves within the Tropopause of the atmosphere and has no direct radio path from Tx to Rx. Position of the lunar orbit makes no impact on Troposcatter.

In the time of 1960 through 1970 (approximately), the NSA was experimenting with its use for both passive intercepts and to active links for covert operations, on HF through VHF. There are two references (non-fiction books not about amateur radio) which mention those. Apparently it was unsuccessful for constant use since no other books about the CIA, NSA, or DIA mention anything further. Obviously lunar orbit positions matter to EME.

>btw, a lot of the people involved in the 1946 moon-radar were
>hams).

1946 was only 1 year after the end of World War II. There was a considerable number of technical and engineering people still hard at work doing advanced projects from WWII end through 1946. Project Diana was a research project for possible military use, to find out if such moon-bounce methods (the FIRST one done) were consistent and repeatable according to theory.

>Yet amateurs continue to pursue EME, right now, today. Yes, there's no
>separate EME test, but there are a significant number of EME questions
>on the license exams.

A quick trip to www.ncvec.org will show that current exams (valid until end of June 2010) have only 6 questions in only the Amateur Extra test. Those are E3A03 through E3A08. Since there are 738 Questions in the Extra pool, those EME questions comprise 0.82% of those 738. Doesn't seem a "significant" number to me. Others' mileage may vary...

The current Question pool has 738 questions for Extra, minimum required being 500. There are 484 in the General pool, minimum required is 350. There are 392 in Technician, minimum required is 350. To do all three tests in one test session is legal but a "memorization" would require remembering a minimum of 1614 questions having 6456 answers or 8070 total.

Being rather familiar with MIL-STD-810, I'd say that you have to take a manufacturer's word on it. Which is not saying much. To really meet the environmental tests, honestly, would raise the price more than most folks care to pay for hobby radios. Harris Corporation is presently producing military radios that might fit your general description but they also have the environmental facilities for it along with calibrated test equipment.

For those never working to DoD shake-rattle-and-bake specs, MIL- STD-810 is a comprehensive environmental test document that describes the accepted methods of temperature testing, vibration and shock testing, water immersion, altitude testing, etc., etc., etc. all as "Methods." Last version I was working to was 810F and I undertand that 810G is the latest. I don't recall if any of them were explicit about testing finishes of the case, which seems to be one of your points. Finishes are under another MIL-STD and I don't have any data of all the MIL Standards. Durability would take in Methods such as a 10g drop test and possibly low-frequency vibration. Durability is usually dependent on case design, nowadays done as a single polymer injection molding. ABS polymer (Acrilonitrile Butadiene Styrene) is a good case material but mold design and reinforcing ribs in the wrong places can make that unfit.

A lot of ads make rather extravagant promises, but only implicit promises. If they are pinned to the wall about exactness of meeting some specifications, it might be a different story. My suggestion is to visit an amateur radio store that has "fondleable" radios and do a personal inspection as far in as you can. If that doesn't work out, then either look or make some kind of slip covering to partially cover it while in-use. Good luck on your hunt.

Ahem..."One word: WIND." :-)

The change from wind power to machine power meant that all could plan
any sea voyage ahead of time, greatly improving schedules plus being
able to accurately factor in costs of fuel and the "burden" equivalent
to keep the crew paid and fed.

>Cost is only a minor part of why commercial communications
>services stopped using cw.

I have to disagree. What is hardly ever brought into amateur radio pep
rallies is the enormous court costs involved in lawsuits over manual
telegraphy errors. This was in the 1870 to 1920 time period for the
most part. Didn't matter whether a telegraphy service was at fault or
not, the court costs and news of alleged bad operation cost some
telegram serivices considerable cash.

It is generally an implicit premise in amateur radio higher- speed
manual telegraphy that skilled morse operators are "perfect." There is
no such thing as "perfection" and one missed character, just one, can
have terrible consequences to a company receiving the message with just
one error when a commercial code was used.

Note: It was common in the time period I mentioned for some telegrammers
to use commercial code books of five-character combinations which cost
them just one word to send. Bentley's Commercial Codes was one such
"code book" published in various editions. Anyone with the same code
book could "decipher" the message content so cryptography was not a
factor. Just one single character mistake could make a "code book"
telegram mean something else entirely.

Consider that telegraphers were human and needed physical breaks and the
typical railroad station telegrapher (seen in so many "western" movies)
worked 12-hour days, 6 days a week, and for little money. In urban areas
later, where electrical power was available round-the-clock, one
relatively unskilled operator could tend at least 10 to 20 teleprinters

(needing only paper and ribbons in their daily needs). One maintenance person could work one shift to tend 10 to 20 teleprinters of the 5-level type. Teletype Corporation consistently made low-maintenance teleprinters including 8-level "ASCII" types. Teletype didn't advance well into electronic terminals and competition with lower-cost, higher-speed electronic terminals and paper printers was too much for them.

>While I'm nostalgic about the end of cw in the world of
>commercial radio, that has nothing to do with my feeling about
>its use in ham radio. One of the things hobbyists do is
>aintain expertise in skills that might otherwise be lost
>forever.

Understood. But there is PLENTY in commercial communications that has been "lost forever" at least in practice. The website

http://www.hallikainen.org/BroadcastHistory/

has an enormous quantity of information about ALL communications, not just radio broadcasting. Hal Hallikainen (WA6FDN) dubs his website "Saving History from the Dumpster" and that dumpster is HUGE. :-)

'Radio' is only 113 1/2 years old. The technology has changed well beyond three magnitude plateaus in that a-tad-over-a- century time. Amateur radio can no longer use "Spark" transmitters yet they were once the overwhelming majority transmitter types. Few radio amateurs can make DXCC using just diode-detector receivers of the coherer or galena-crystal type. :-) LF alternators were the first TRUE CW sources but those were always prohibitively expensive for all but millionaire amateur hobbyists. Today the ARRL has yet to make a serious push to get LF amateur bands other than the limited experimental permission to use "600m." Several European nations have amateur bands on LF. <shrug>

Even the venerable "Teletype" has gone the way of dumpsters except for a very few USA amateurs. The more-correct name of "Data" now encompasses largely-electronic, solid-state terminals, either stand-alone or as program modifications of PCs. Anyone looking at the mechanical complexity of electro- mechanical teleprinters (and in reading their maintenance manuals) will find they are far more complex than stand-alone electronic terminals. But, "Teletypes" are all physical and out-in-the-open and therefore "more undertandable" to some folks who have very little experience in electronics.

>I enjoy the mode, and it still has plenty of application
>in my hobby. If others don't enjoy it, fine.

Excellent attitude in my viewpoint!

>... I'm not going to denigrate my fellow ham because
>they don't care to operate a mode that I happen to enjoy.

Even BETTER! I just wish that were the main attitude in the USA but, by example, it does not seem to be so.

Maybe it's because I am in a college town, and being around
fraternities, the word "test" has more than one meaning, Fraternities
often have tests that really filter out who wants to join, and who
doesn't It's one of those red flag words.

>
> The new Morse Code club described is similar, IMHO.

I guess w';ll just have to disagree, Jim. let me try a different analogy.

If I wanted to have an exclusive club, one in which I and others who I thought had made the grade, and that I wanted to be around, without annoying new people, I would design it to have a minimum requirement well beyond what the base requirement was - keeping in mind that the original test was gone. Then I would have something like prospective members have to be nominated by people who are already club members. I would do this in order to be sure that only the right people got in.

Is this the case here? Not necessarily, but who knows.

> One thing I have observed among amateurs actually *using* Morse Code is

> power, it doesn't make any difference.

Well, my experience has been a little different. On the air, it hasn't been too bad, but in person, I've been told that despite what I do for amateur radio, I am a second class Ham because I'm not a regular user of CW. I've been told that my physical issues notwithstanding, I can never be a first class Ham, because it is like an athlete. Not everyone can be a professional football player, because not everyone has the physical attributes. My hearing precludes me being a real Ham.

And believe it or not, I was once called insane because I gave the same number of QSO points to RTTY and PSK31 QSO's for scoring a contest. That's the exact wording. Some of these folks wanted the double point value to be exclusively for CW Ops, and were outraged that I offered it to any other modes. That was personally disappointing to say the least, because I've always stood up for the mode.

Now as far as that goes, no problem. I'm opinionated and realize that the nail that sticks up is the one that gets the hammer. For me, it's just data points. I appreciate the mode, and will continue to support and promote it, because of it's historical, practical, and technical value. But I've learned to not expect any appreciation for that. Anyhow, it's been a good thread.

I'm not sure what you mean by "salt water batteries", Mike.

The book and QST articles only mention "dry batteries", which in 1947 pretty much meant carbon-zinc batteries. They A batteries wore down before they ran out of B batteries, so some B batteries were taken apart and resoldered to do the A job. (High humidity was a majorproblem.)

"Wet" storage batteries were rejected because of the danger of acid spillage. A hand-cranked generator was the backup source.

They were on the raft 101 days, so they must have had a considerable battery supply.

btw, the transmitter designs were based on QST articles. They used quick-heating 2E30 tubes, so they only used power when transmitting.

The receiver was almost certainly modified to reduce the battery drain. No need for the last audio stage if headphones were used, saving a considerable amount of power. No need for AVC or dial lights, either. Still, a heater drain of over 2A would result.

An amazing adventure, even today.

> Is this the case here? Not necessarily, but who knows.

One thing is for sure: the club appears to be growing fast. I printed
out the member roster a few days ago, and already it's way outdated
because there's a lot more members.

I disagree with that very strongly!

Of course not everybody can be a world-class athlete nor even a
"professional" one. But almost everyone can be an athlete at somelevel.

I agree with Bill Rodgers, the famous marathoner (won Boston a couple
times IIRC). When someone asked him who *he* admires, he pointed to the
folks who run a marathon in four hours, as compared to his two-
hours-and-change. He said something on the order of 'they're out there
twice as long as I am, trying just as hard!'

> And believe it or not, I was once called insane

I've been called a lot worse, and a lot more times, for a lot less.

The operative word there is "some".

IMHO, when a person resorts to things like name-calling and personal
insults, it really says a lot more about the name-caller than the name-
callee. (if that's even a word).

It looks to me like your words exactly describe the membership
requirements for the new organization. I'm assuming that the mention of
competency testing is really only for show.

And fine, if that's what these folks want, then they have as much right
to organize as any other group. It's not something that turns my crank,
but that just means that I won't join.

I'm sorry to hear that. There are a lot of hams out there, and any time
you get a large group of humans together, you're going to find a certain
number of insensitive idiots. Frankly I think there are more hams at
both ends of the normal curve than in the general population. That
means that there are more idiots, but there are more Really Good People.

You might be interested that my experience has been exactly the opposite
here in the local ham group. There is exactly one other cw operator in
the club, and he only shows up at the Field Day operation. The club
members ridicule cw. They think it is completely stupid and cannot
understand why anyone would use it. Their term for cw ops is "no talkers".

> And believe it or not, I was once called insane because I gave the

Designing the rules for a contest is one of those classic lose/lose
situations. Not that there's any excuse for someone using the term
"insane", but if you had done it the other way and kept the bonus
exclusively for cw then it would have been the RTTY and PSK31 ops who
were upset. You can't please all of the people . . .

Several Emergency Coordinators and others involved in emergency communications in Nebraska raised concern last year about a new law that prohibited the use of flashing lights on storm-spotter's vehicles. Many felt that the flashing lights protected spotters parked in isolated areas where occasional high speed traffic presented a danger.

I am pleased to report, thanks to J.R. Reider, K0JWR, that a bill was introduced by Senator Bill Avery (District 28) to amend the law and allow use of flashing amber lights by storm-spotters. The bill is LB 719. You download the pdf file of the bill at:
http://nebraskalegislature.gov/FloorDocs/Current/PDF/Intro/LB719.pdf

Pat Gerdes, KA0SGL, along with other Emergency Managers took the initiative to make this happen.

Please take a moment and send an email or letter to your State Legislator in support of this bill. Showing support in this manner not only helps the bill, but it keeps our Legislators aware of all the hams who volunteer at their own risk to protect our communities.

Thanks and 73,
Art K0AIZ

A battery using salt water as an electrolyte. One version is a
"Volta's pile".

They usually had discs of copper and zinc separated by paper soaked in
electrolyte. 1 volt per cell in that construction. I don't know the
current per cell.

Typical laboratory use had stacks in a glass tube, but that wouldn't
be strong enough for use on the ocean.

60. Information about Haiti and Amateur Radio

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-13 16:32:56 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100113161848.B1A56327770@bmailer.arrl.org>
Source record: 1682
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.info

I received the following from Steve Ewald, WV1X, at ARRL HQ.
****

On Tuesday (January 12) there was a 7.0 magnitude earthquake in Haiti, which has since been followed by serious aftershocks. Communications in and out of Haiti have been disrupted. No word has been received as of yet from any of the national HH Amateur Radio operators. The DailyDX notes that HH2/HB9AMO, Pierre, is OK and was located about 140 km north of Port-au-Prince in Cap Haitien at the time.

The IARU Region II Area C Emergency Coordinator, Arnie Coro, CO2KK, is coordinating the multi-national response by hams. There are organized nets on 7045 and 3720 kHz and amateurs are asked to monitor but also keep the frequencies clear of non-essential traffic. Amateur Radio operators should also be aware that emergency traffic pertaining to the Haitian earthquake is expected on the SATERN frequencies of 14265, 7265 and 3977 according to SATERN's leader, Major Pat McPherson. The Salvation Army has a website up for H&W traffic and other news at www.satern.org.

Amateur Radio operators are circled around Haiti in Cuba, Florida, the Dominican Republic, Puerto Rico, Venezuela and other locations listening for any calls, but so far no HH stations had checked in.

Please keep clear of frequencies :
14265
7045
7265
3977
3720

The situation is still chaotic and more information will be posted as soon as possible. Information is being validated and shared between many amateur groups and news sources as it unfolds.

==========

Thank you.

73,

Steve Ewald, WV1X

I remember now. Yes, it would probably take a raft-sized set of cells to run the radio!

>From what I've read, they considered all the available technologies but settled on plain carbon-zinc primary "dry" batteries as the best compromise of size, weight, dependability and power output. (A carbon-zinc #6 dry cell is about 50 AH, which is a lot more than most other battery technologies of that time could provide). In the event, the batteries turned out to be a considerable problem due to highhumidity.

Most of their operation was on 20 meters. They had provision for 40, 20, 10 and even 6 meters, but 20 proved to be the most reliable for the distances covered and available antennas. With just 6 or 7 watts of CW they were able to contact Oslo and wish the King a happy birthday. At the time, they were just about at the Antipodes.

==> + PUBLIC SERVICE: HAITI EARTHQUAKE: "IT'S CHAOS, I'M TELLING YOU --
IT'S REAL CHAOS"

On Tuesday, January 12 at 4:53 PM Haiti time (2153 UTC), a magnitude
7.0 earthquake hit 10 miles (15 kilometers) west of Port-au-Prince, the
island nation's capital. Communications in and out of Haiti have been
disrupted. The ARRL encourages US amateurs to be aware of the emergency
operations on the following frequencies: 7.045 and 3.720 MHz (IARU
Region 2 nets), 14.265, 7.265 and 3.977 MHz (SATERN nets), and 14.300
MHz (Intercontinental Assistance and Traffic Net); the International
Radio Emergency Support Coalition (IRESC) is also active on EchoLink
node 278173. There was no firm estimate on how many people were killed
by Tuesday's quake. Haitian President Rene Preval said the toll could
be in the thousands: "Let's say that it's too early to give a number."
```

On Wednesday afternoon, Fred Moore, W3ZU, assisted Jean-Robert Gaillard, HH2JR, with a phone patch to his friend Ariel in Miami. "It's bad, it literally is bad," Gaillard told Ariel. "We don't know how many people are dead. We do not know what to expect. It's chaos, I'm telling you -- it's real chaos. We are really in a disaster area. It's really a war zone. Many, many buildings in the downtown area are stripped from the ground with many people buried underneath them - you name it, it's bad." Gaillard, who lives in Port-au-Prince, was using his neighbor's generator to make the contact. "It's really chaotic. I've never been in a war, but this is what a war zone would be like. Dead bodies all over the place, dead bodies buried. All I can tell you is that I'm okay, my house is okay. We've had 30 aftershocks, the main one yesterday. We are expecting some more shocks, so I'm a bit nervous to be inside the house."

"The scope of the disaster clearly shows that the response to this is going to be a long term effort," said ARRL Media and Public Relations Manager Allen Pitts, W1AGP. "The ARRL has been in contact with communications leaders of the American Red Cross and Salvation Army, as well as other key Amateur Radio operators throughout the region. As teams from the hundreds of responding agencies worldwide are formed for deployment, many will have Amateur Radio components. ARRL is committed to providing communications aid to our served agencies and working with the international community in this time of crisis. At this time there are no known requests from agencies for amateurs to travel to Haiti, but this can change. If it develops that there are ARESÂ® assignments for a deployment in Haiti, these will be vetted and processed through each Section's Section Emergency Coordinators." Read more here <http://www.arrl.org/news/stories/2010/01/14/11290/?nc=1>.

==> + ARRL STANDING COMMITTEES MEET PRIOR TO 2010 ANNUAL MEETING

The ARRL Board of Directors holds its 2010 Annual Meeting this weekend -- January 15-16 in Windsor, Connecticut. Directors, Vice Directors and ARRL Board officers will be in attendance. The meeting will be preceded on Thursday, January 14 with meetings of the Administration and Finance Committee and the Programs and Services Committee. The Administration and Finance (A&F) Committee is chaired by Northwestern Division Director Jim Fenstermaker, K9JF. This committee studies, advises and makes recommendations for all administration and financial matters of the League, including recommending the annual budget to the Board, making recommendations in regard to staff management and monitoring investment of ARRL funds. The Programs and Services Committee (PSC), headed by Midwest Division Director Bruce Frahm, K0BJ, studies, advises and makes recommendations for all programs and services provided by the League, including operating activities and the Field Organization. Reports on the 2010 Annual Meeting will be available next week. Read more here <http://www.arrl.org/news/stories/2010/01/12/11284/?nc=1>.

==> + ARRL ON-THE-AIR: WARM UP WITH THE ARRL JANUARY VHF SWEEPSTAKES!

VHF weak-signal operators will be on the bands in force the weekend of January 23-25 as the ARRL January VHF Sweepstakes hits the airwaves. This contest gives the VHFer in all of us a chance to do some contesting during the winter months. ARRL Contest Branch Manager Sean Kutzko, KX9X said that January may not seem like the ideal time to hold a VHF+ contest: "After all, sporadic-E propagation is most commonly associated with summer months; however, the propagation gods like to surprise and confound, and there have been plenty of QSOs made via sporadic-E in the colder months through the years. Plenty of other chances for enhancement exist as well, thanks to tropospheric ducting and auroral propagation. Thanks to the advent of WSJT software, making QSOs via meteor scatter in the wee hours of the morning on 6 and 2 meters has never been easier. You have plenty of opportunities to make long-haul QSOs on the VHF+ bands in January!" Read more here <http://www.arrl.org/news/stories/2010/01/13/11282/?nc=1>.

==> AMATEUR RADIO IN SPACE: ARISS NOTES RECORD NUMBER OF ISS-TO-SCHOOL CONTACTS

When the Amateur Radio on the International Space Station (ARISS) program began coordinating ISS-to-school contacts in 2001, only one school -- Luther Burbank Elementary School in Burbank, Illinois -- participated. Ten years later, more than 120 schools participated in the ARISS program in 2009 alone. The number of ARISS-coordinated ISS-to-school contacts has climbed dramatically since that first contact in 2000. In 2001, there were 42 contacts, and in 2002, there were 40 contacts. During the first five years of the program -- 2000-2004 -- there was an average of 31.4 QSOs between the ISS and schools. In 2004, ARISS only conducted 35 contacts -- the lowest in its 10 year history -- but in 2005, 55 schools had contacted the ISS through the program. In 2006, there were 47 QSOs, 75 QSOs in 2007 and 62 in 2008. The 121 QSOs in 2009 show a jump of 95 percent over the 2008 numbers -- setting an ARISS record for the number of contacts. Read more here <http://www.arrl.org/news/stories/2010/01/12/11285/?nc=1>.

==> + PUBLIC SERVICE: NHC TO PROVIDE GREATER LEAD TIME FOR WATCHES, WARNINGS

Beginning with the 2010 hurricane season, NOAA's National Hurricane Center in Miami will issue watches and warnings for tropical storms and hurricanes along threatened coastal areas 12 hours earlier than in previous years. According to NHC experts, advancements in track forecasts are making it possible for forecasters to provide greater lead time. Tropical storm watches will be issued when tropical storm conditions are possible along the coast within 48 hours. Tropical storm warnings will be issued when those conditions are expected within 36 hours. This is an increase of 12 hours from those issued in previous years. Hurricane season runs from May 15-November 30 in the Eastern Pacific and on June 1-November 30 for the Atlantic Basin. Read more here <http://www.arrl.org/news/stories/2010/01/14/11287/?nc=1>.

==> + FOCUS ON THE FCC: FCC SEEKS PUBLIC'S HELP IN REFORM EFFORT

According to its chairman, the Federal Communications Commission wants to change the way it is seen by the American public. In order to further that effort, on January 7, FCC Chairman Julius Genachowski announced that the Commission had launched a new Web site -- Reboot.FCC.gov-- saying it is the first-ever Web site dedicated to soliciting public input on ways to improve citizen interaction with the FCC, "creating a forum where the public can participate in improving the FCC." Read more here <http://www.arrl.org/news/stories/2010/01/08/11281/?nc=1>.

==> ARRL PUBLICATIONS : TWO LEAGUE PUBLICATIONS NOW AVAILABLE FOR KINDLE

In December 2009, the ARRL's Tech Q&A <http://www.amazon.com/ARRLs-Tech-Q-A-ebook/dp/B002YNSBNE/ref=sr_1_2?ie=UTF8&s=books&qid=1259944328&sr=8-2-catcorr> debuted on Amazon.com for use with Kindle wireless reading device. Now we are pleased to announce that the ARRL's General Q&A <http://www.arrl.org/catalog/?item=9957> and the ARRL's Extra Q&A <http://www.arrl.org/catalog/?item=1379> are now available directly from the online bookseller for use on the Kindle . Kindle is shaped much like a book with a paper-like screen that displays text and pictures. Those who have the Kindle application installed on their Apple <http://www.apple.com/> iPhone <http://www.apple.com/iphone/> or iPod touch <http://www.apple.com/ipodtouch/> -- or even on their computer -- can download the book for use on these devices. When you download the Tech Q&A, General Q&A and the Extra Q&A, you get access to these study tools quickly and easily, smoothing the path to your first -- or next! -- ham radio license. Studying on the Kindle is perfect for today's busy lifestyle, whether you're at home, in the office, traveling or just on the go. Each version of the Q&A lets you review questions and answers from that element's entire question pool so you can pass your exam. All three versions are available for purchase from Amazon.com for $9.99 each.

==> + NOW YOU KNOW!: HURRICANE NAMES

By ARRL News Editor S. Khrystyne Keane, K1SFA

<http://docs.lib.noaa.gov/rescue/mwr/056/mwr-056-09-0350.pdf> For several hundred years, many hurricanes in the West Indies were named after the particular saint's day on which the hurricane occurred: In his 1938 book Hurricanes, Ivan R. Tannehill describes the major tropical storms of recorded history and mentions many hurricanes that were named after saints. On July 26, 1825, Hurricane Santa Ana <http://en.wikipedia.org/wiki/1825_Santa_Ana_hurricane#1825_Atlantic_hurricane_season> struck Puerto Rico with exceptional violence. Hurricane San Felipe (the first) <http://en.wikipedia.org/wiki/1870%E2%80%931879_Atlantic_hurricane_seasons#San_Felipe_Hurricane> and Hurricane San Felipe (the second) <http://docs.lib.noaa.gov/rescue/mwr/056/mwr-056-09-0350.pdf> also hit

Puerto Rico on September 13 in both 1876 and 1928.

During World War II, the practice of giving hurricanes women's names became widespread in weather map discussions among forecasters, especially Air Force and Navy meteorologists who plotted the movements of storms over the wide expanses of the Pacific Ocean. In 1953, the United States abandoned a confusing two year old plan to name storms by the phonetic alphabet in use at the time (Able, Baker, Charlie and so on) when a new, international phonetic alphabet was introduced. That year, the United States began using female names for storms. The practice of naming hurricanes solely after women came to an end in 1978 when men's and women's names were included in the Eastern North Pacific storm lists. In 1979, male and female names were included in lists for the Atlantic and Gulf of Mexico.

Since 1953, Atlantic tropical storms have been named from lists originated by the National Hurricane Center (NHC <http://www.nhc.noaa.gov/index.shtml>). They are now maintained and updated by an international committee of the World Meteorological Organization (WMO <http://www.wmo.int/pages/index_en.html>). There are six lists of hurricane names <http://www.nhc.noaa.gov/aboutnames.shtml> and they are used in rotation. This means that the 2010 list will be used again in 2016. According to the NHC, the only time that there is a change in the list is if a storm is so deadly or costly that the future use of its name on a different storm would be inappropriate for reasons of sensitivity such as 2005's Hurricane Katrina). If that occurs, the offending name is stricken from the list and another name is selected to replace it at the WMO annual meeting. Check out the list of retired names on the NHC Web site <http://www.nhc.noaa.gov/retirednames.shtml>.

Several names have been changed since the lists were created. For example, on the 2007 list (which will be used again in 2013), Dorian has replaced Dean, Fernand has replaced Felix and Nestor has replaced Noel. For 2010, Colin replaced Charley, Fiona replaced by Frances, Igor replaced by Ivan and Julia replaced by Jeanne. Before 1979 -- when the first permanent six-year storm name list began -- some storm names were simply not used anymore. For example, in 1966, "Fern" was substituted for "Frieda," and no reason was cited. There are only 22 names on each list since the WMO does not use names that begin with Q, U, Y or Z. The names for 2010 are Alex, Bonnie, Colin, Danielle, Earl, Fiona, Gaston, Hermine, Igor, Julia, Karl, Lisa, Matthew, Nicole, Otto, Paula, Richard, Shary, Thomas, Virginie and Walter.

In the event that more than 21 named tropical cyclones occur in the Atlantic basin in a season, additional storms will take names from the Greek alphabet: Alpha, Beta, Gamma, Delta and so on. If a storm forms in the off-season, it will take the next name in the list based on the current calendar date. For example, if a tropical cyclone formed on December 28, it would take the name from the previous season's list of names. If a storm formed in February, it would be named from the subsequent season's list of names.

You can find lists of names for storms on the NHC Web site for every region of the globe <http://www.nhc.noaa.gov/aboutnames.shtml>, including the Eastern North, Central North and Western North regions of the Pacific Ocean, Australia, Fiji, Papua New Guinea, the Philippines and the Northern and Southwest portions of the Indian Ocean. Now you know!

==> SOLAR UPDATE

Tad "Blinded alike from sunshine and from rain <http://englishhistory.net/keats/poetry/eveofstagnes.html>" Cook, K7RA, reports: Recent growing sunspot activity remains strong. Weekly averages of daily sunspot numbers over the nine weeks from November 12-January 13 were 9, 12.6, 0, 1.9, 21.1, 31.4, 21.9, 14.6 and 26.4. Sunspot region 1035 re-emerged as region 1040 on January 7 and his grown steadily. For January 7-13, the total area of region 1040 -- as expressed in millionths of a solar hemisphere -- was 80, 40, 70, 130, 300, 300 and 380. It has passed the 0 degree meridian (the imaginary vertical line on the visible Sun that faces straight toward Earth), but looks as if it has perhaps another 5 or 6 days before it crosses the Sun's western horizon. Look for more information in the Solar Update, available on the ARRL Web site on Friday, January 15. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' The Eve of St Agnes <http://englishhistory.net/keats/poetry/eveofstagnes.html>.

==> + IN THE WORKSHOP: DEADLINE FOR SECOND HOMEBREW CHALLENGE APPROACHING

All entries for the Second ARRL Homebrew Challenge must be received in the ARRL Lab no later than close of business on February 28, 2010. Since that is a Sunday, the judges will accept entries arriving with the first mail delivery on Monday, March 1, 2010. In 2006, the ARRL sponsored a successful competition for a 5 W, 40 meter voice/CW transceiver that could be built for $50. This second Homebrew Challenge offers an opportunity to boost that power to 50 W with an amplifier built from no more than $125 of parts. Rules, subsequent requests for clarification and responses, as well as a list of prizes, can be found on the ARRL Homebrew Challenge Web page <http://www.arrl.org/qst/hbc/>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=TuV-D37BQn0> This week, there is a running of the NCCC Sprint on January 15. The Hungarian DX Contest and the North American QSO Party (SSB) are January 16-17. The Feld Hell Sprint is January 17, the Run for the Bacon QRP Contest is January 18 and the NAQCC Straight Key/Bug Sprint is January 21. Next week, be sure to check out the ARRL January VHF Sweepstakes on January 23-25. On January 22, there is another running of the NCCC Sprint. Look for the YL-ISSB QSO Party (SSB), the MIE 33 Contest and the BARTG RTTY Sprint on January 23-24. The SKCC Sprint is January 27. All dates, unless

otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL STAFF VACANCY

ARRL is soliciting applications to fill the HQ position of Emergency Preparedness and Response Manager. The person in this position will develop and maintain ARRL's Emergency Communications and Emergency Preparedness functions, both internally and externally. Candidate review by the hiring committee will begin in mid-January. Please see ARRL Web site <http://www.arrl.org/announce/jobs/> for application information and job requirements.

==> THE ARRL CONTEST UPDATE SEES CIRCULATION MILESTONE

The December 23 and January 6 issues of the ARRL Contest Update <http://www.arrl.org/contest/update> newsletter cracked another barrier with more than 25,000 subscribers. Containing material that goes beyond straight contest reporting, subscribers to the Contest Update find it full of all types of useful material. The newsletter -- available free to ARRL members and published every two weeks by e-mail or Web access -- got its start as a modest text-only bulletin in March 2002. Having expanded its coverage to topics of interest to any active ham, the newsletter's byline and mission became "News and Techniques for the Active Operator" in 2008 as it pioneered the ARRL's graphic newsletter format. A typical newsletter contains news and human interest stories, press releases about new products for hams, photos and links to multimedia content, an editorial segment, a big section of technical items that any ham can put to work -- and even a chuckle or two. You will also find contest results from your state's QSO party, as well as a calendar of upcoming contests and due dates for contest logs. Why not give the newsletter a try? Back issues are available online <http://www.arrl.org/contest/update>. To sign up for free delivery, log in to the ARRL Web site with your call sign and password, then click "Member Data page" and "Modify membership data." At the bottom of the page, click the box next to "ARRL Contest Update (biweekly contest newsletter)" and you're ready to read!

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, January 24, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, February 10, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page

<http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline report number 1692 with a release date of
Friday, January 15, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds as an earthquake ravages
Haiti, Sweden pulls interference causing B-P-L gear off store shelves,
the FCC appears headed toward an extreme makeover and the sound of
heavy and light iron will be taking to the air the weekend of February
7th. Find out the details on Amateur Radio Newsline(tm) report number
1692 coming your wayright now.

RESCUE RADIO: HAM RADIO FIRST RESPONDERS ACTIVATE FOLLOWING HAITI
QUAKE

A powerful earthquake has struck off the coast of Haiti. The tremor
hit on Tuesday, January 12th at 2153 UTC. According to the US
Geological Survey the epicenter was about 10 miles south-west of
Port-au-Prince and hit a magnitude 7.3 on the Richter Scale. The first
tremor was followed by two aftershocks with magnitudes of 5.9 and 5.0.

Soon after the first jolt amateur radio first responders were activated
in Cuba to listen for any distress calls from is Caribbean neighbor.
Bill Pasternak, WA6ITF, is in the newsroom with more.

--

HH2JR: " I am able to communicate for the first time. I hope you are
copying me OK. The situation is chaotic and I am only alive thanks to
god. Over."

--

That's just part of a conversation captured by Newsline listener Brian
Crow, K3VR, on Wednesday, January 13th as hams in quake ravaged Haiti began
returning to the airwaves. Jean-Robert Gaillard, HH2JR, was one of the
first and with Fred Moore, W3ZU, running the patch he described what Haiti
was like when he finally was able to get a chance to view the devastation
first hand:

--

HH2JR: "Yesterday was really bad but I managed today to go and visualize
-- myself and a couple of friends. We took some pictures and its really
chaotic. I've never been through a war but its what a war (signal

fade). Dead bodies all over the place and dead bodies (signal fade) to be buried."

--

HH2JR also described the aftershocks:

--

HH2JR: "I'm OK and my house is OK and that's all I can tell you. (signal fade) We have had thirty aftershocks, Repeat three zero aftershocks since the big one yesterday at ten (minutes) to five in the afternoon. Over to you."

--

That contact was among the first of the personal ham radio on scene accounts of living through a killer quake but not the first ham radio response to this disaster. Soon after the quake hit, CQ Magazine editor Rich Moseson, W2VU, put out an e-mail alert that quoted IARU Region 2 Area C Emergency Coordinator, Arnie Coro, CO2KK. Corro said that he was already coordinating a multi-national response by hams with organized nets on 7.045 and 3.720 MHz. The net control stations were identified as CO8WM and CO8RP located in the city of Santiago de Cuba. According to Corro these nets were in direct contact with the National Seismology Center of Cuba located in that city. CO2KK asked hams world-wide to monitor the two net frequencies, but to also keep them clear of non-essential traffic. International Radio Emergency Support Coalition is also active on EchoLink node 278173.

On Wednesday the ARRL put out a notice saying that amateur radio operators should also be aware that emergency traffic pertaining to the Haitian earthquake is expected on the Salvation Army SATERN net frequencies. According to SATERN's leader, Major Pat McPherson, those frequencies are 14.265, 7.265 and 3.977 MHz. The Salvation Army is accepting health and welfare traffic requests on its Web site.

As to the health and welfare of hams living in Haiti. Part of that was covered in the January 13 edition of The Daily DX newsletter. It reported that the Reverend John Henault, HH6JH, made contact late Wednesday morning with the Intercontinental Assistance and Traffic Net on 14.300 MHz. This is the IARU Global Center of Activity frequency for emergency communications. HH6JH said that he was safe, but had no power and no phone service. Also that he was operating on battery power and hoping to get a generator running later in the day. The newsletter also noted that Pierre Petry, HH2/HB9AMO who was in Cap Haitien about 140 km north of Port-au-Prince is okay. Petry is in Haiti working for the United Nations World Food Program.

Daily DX also reports that members of two ham radio groups from the neighboring Dominican Republic, the Radio Club Dominicano (RCD) and Union Dominicana de Radio Aficionados (UDRA) are preparing to go to Port au Prince. Once there the team will be installing an emergency radio

communications station operating as HI8RCD/HH and a mobile station. The team of Dominican Republic Amateur Radio operators includes HI8PGG, HI8FLB, HI8CJG, HI8DBF, HI8SAR, HI8JLH, HI8ROD and HI3TEJ.

The situation in Haiti is still chaotic and literally changing from moment to moment. The most important thing is to keep 3.720, 7.045, 7.265, 14.265 and 14.300 clear for emergency and priority traffic and quake relief nets on these frequencies. We will post updates in text form on our Newsline Facebook web update page as they become available. To access it just go to facebook.com and friend Amateur Radio Newsline.

And for the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles. Don

--

Haiti's ambassador to the United States is Raymond Joseph. He called the quake a major catastrophe, telling the various news services that he is calling on friends of Haiti to come to the country's aid. (ARNewsline(tm), CQ, ARRL, SATERN, Daily DX. Audio supplied by K3CR)

RESCUE RADIO: NEBRASKA MAY ASSURE WEATHER SPOTTERS EMEREGENCY LIGHTS

Still with rescue radio related news, word that a measure has been introduced into the Nebraska state legislature to assure that storm and severe weather spotters will be permitted to continue to have distinctive lighting on their vehicles. This after several of the states Emergency Coordinators and others involved in crisis communications in Nebraska raised concerns last year about a new law that prohibited such visual notification devices being used.

Many weather spotters felt that these lights protected them while parked in isolated areas where occasional high speed traffic presented a danger. Now, thanks to James R. Reider, K0JWR, a bill was introduced on January 6th by District 28 Senator Bill Avery to amend the law on vehicle lighting to allow use of distinctive amber lights by storm-spotters.

In part the measure states that rotating or flashing amber lights can be displayed by any motor vehicle being operated by or on behalf of a weather spotter. This, by a person who holds an unrevoked and unexpired amateur radio station license issued by the Federal Communications Commission. It also applies to emergency management workers while they are engaged in responding to an emergency.

The measure has been designated as Nebraska is LB 719 and is available for download at the U-R-L in this weeks printed Amateur Radio Newsline report. Nebraska hams are being asked to take a moment and send an email or letter to their respective State Legislators in support of this bill. You download the .pdf of the bill at http://nebraskalegislature.gov/FloorDocs/Current/PDF/Intro/LB719.pdf (K0AIZ)

THE BPL WAR: SWEDEN WITHDRAWS SOME BPL/PLT MODEMS FROM MARKETPLACE.

Score one in the BPL war for ham radio. The latest issue of the EUROCOM newsletter has a welcome item on the withdrawal by Sweden of polluting Power Line Adapters.

The January 5th edition notes that Sweden has withdrawn some Broadband over Powerline or PLT Modems of the nations market. The Swedish administration argued that those devices did not meet the protection provided by the harmonized standard. It also noted that in many cases harmful interference could actually be measured. It said that in those cases reception in accordance with ITU Regulation was no longer possible an therefore the essential requirements violated. (Southgate)

**

RADIO LAW: AUSTRAILIAN RADAR LEAVES 10 MHz HAM BAND

The IARU R1 website reports that an ionespheric Radar in Australia has left the amateur radio spectrum in the 10 MHz band. The report says that following complaints filed by VK4DU and DJ9KR to the La Trobe University that the Tiger Radar in Bruny, Tasmania agreed to change the frequency data bases. Also. Guarantees were made that in the future no ham radio band will be interfered by this ionespheric radar system. (IARU Region 1)

**

HAM RADIO IN SPACE: INDIA'S STRUDSAT TO LAUNCH IN MARCH

India's StudSat or Student Satellite, now slated for a March 2010 launch and will carry a camera capable of 90 meter resolution.

StudSat is described as a small cube weighing about 850 grams. The satellite is intended to be launched in 700 km Sun-synchronous orbit. It will perform the function of a remote sensing satellite and take images of earth's surface with a resolution of 90 meters, the best achieved by any "PICO" category satellite in the world.

Radio wise it will likely carry a 10 milliwatt UHF CW beacon and also a half duplex FSK link with 1 watt output also on UHF. Work on StudSat started in 2007. And we will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (ANS)

RADIO POLITICS: AN EXTREME MAKEOVER FOR THE FCC

FCC Chairman Julius Genachowski is asking for public assistance on how his agency can better serve the needs of America. On January 7th, the FCC Chairman announced the establishment of a new website called Reboot.FCC.gov. Genachowski calls it the first ever website dedicated to soliciting public input on ways to improve citizen interaction with the FCC. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In his own words, FCC Chairman Julius Genachowski sees the new website as creating a forum. One where the public can participate in improving the FCC.

According to Genachowski, his agency wants to change the way it is seen by the American public. And in his remarks following the new cyberspace portal's launch he called it a website dedicated to public education and discussion on how the FCC can continue to improve its operations, both on and offline.

The Reboot.FCC.gov Web site highlights five key elements of FCC reform for public discussion and feedback. These are the redesign of the primary FCC Web site at www.fcc.gov. This, to better serve the needs of the American people.

Second is the launch of an additional website called FCC.gov/data. This to serve as an online clearinghouse for the Commission's public data.

There is also what the FCC Chairman terms as the reevaluation of how citizens engage in government and exploring new ways to increase public participation through the use of new media tools. Another point involves overhauling and reforming the systems available on the FCC's primary website.

Finally, but by no means least is modernizing the efficiency of agency proceedings. This last initiative also seeks input on ways to improve the quality of agency decision-making, reduce backlogs and enhance the public's ability to understand and participate in Commission proceedings. To assist in accomplishing this goal, the new website also plays host to the first ever FCC wide blog, online workshops on the Commission's reform agenda and the first set of new tools to increase transparency and access to public data.

Julius Genachowski says that transforming the FCC into a model of excellence in government is one of his top priorities. But he adds that the success of such a transformation depends on strong public participation throughout the process.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, watching and reporting on this FCC extreme makeover from Los Angeles.

--

FCC Chairman Genachowski says that this is an effort that is consistent with the President Obama's Open Government directive. This as a method of creating a forum where the public can participate in improving the FCC. (FCC)

**

RADIO LAW: WHITE SPACE WIRELESS MIC BILL GETS INDUSTRTY SUPPORT

A bill introduced by Representative Bobby Rush of Illinois that would require the FCC to allow thirteen classes of professional wireless microphones to register in a location database has won industry support from microphone manufacturer Shure. Just prior to the January 4th commentary cutoff sate the company threw its weight in favor of the so-called protected white spaces that would protect professional wireless mics from interference caused by such devices as wireless laptop computers and smart radios that the FCC is allowing to share the TV band as well.

The database will show users that the new unlicensed wireless devices must avoid when searching for channels to use. The protected classes of wireless microphones include those used at amusement parks, arenas, convention centers, educational facilities, fairgrounds, government facilities, houses of worship, lodging facilities, museums, recording studios, restaurants, stadiums and theaters. Not protected are consumer level wireless mics that have become popular with wedding photographers and home video hobbyists including some hams who use them for amateur TV related projects. (B&C)

**

ENFORCEMENT: TEXAS UNLICENSED STATION WHICH CLAIMED FCC HAD NO JURISDICTION FINED $10000

A couple who claimed that the FCC had no jurisdiction over their unlicensed radio station because it operated only in Texas will have to pay a $10,000 fine after all. Amateur Radio Newsline's Mark Anramowicz, NT3V, reports:

--

This story goes back to last August when in response to a complaint the Houston office of the FCC's Enforcement Bureau used its direction-finding gear to T-hunt down an illegal signal 90.1 MHz. to an Austin home. It then issued a notice of unlicensed operation Jerry and Deborah Stevens which the Stevens acknowledged. The Stevens then requested additional time to provide information in their reply.

The commission granted 30 days to provide the information it had requested. During that time the investigating agents identified further illegal broadcasts on two subsequent dates as coming from the Stevens' property. The Stevens' responded by admitting operating radio transmitting equipment, though only within the boundaries of the state of Texas. They also questioned the FCC's jurisdiction over intrastate communications.

In November the FCC issued its $10,000 Notice of Apparent Liability to the couple. The Stevens contested it and again questioned the FCC jurisdiction

in the matter. They also questioned whether the resident agent who signed the N-A-L had the authority to do so.

Now the FCC has upheld the Notice of Apparent Liability against the Stevens for their 90.1 MHz unlicensed operation. In doing so the agency reiterated that the law explicitly sets forth the commission's jurisdiction
over all radio transmissions, both interstate and intrastate.

But the finding goes further. The FCC order states that resident agents at each installation are delegated authority by the Commission to act upon applications, requests or other matters, which are not in hearing status. As such resident agents may indeed issue a written notice of apparent liability in cases where they believe that FCC rules or the Communications Act have been violated. It then ordered that the N-A-L be confirmed and ordered the Stevens to pay.

Watching the FCC enforcement log, I'm Mark Abramowicz, NT3V, in Philadelphia for the Amateur Radio Newsline.

--

The fine was confirmed by the regional director of the South Central Region of the Enforcement Bureau. The Stevens' were given the customary 30- days to pay the fine or to file an appeal. The complete finding in this case is on-line at http://www.fcc.gov/eb/FieldNotices/2003/DOC-294712A1.html (FCC)

**

PUBLIC SERVICE: HAM RADIO AND THE B2V CHALLENGE CUP RELAY

Hams are once again needed to assist in providing communications for the Santa Clarita, California contingent taking part in the upcoming Baker to Vegas Challenge Cup Relay. The race takes place April 16th to the 18th. The course begins about 12 miles west of Baker California on Highway 127, heads to the fabled city of Pahrump, Nevada, turns onto the Blue Diamond Highway towards Las Vegas.

There 250 teams each with 26 runners, 3 support vehicles with at least two support people in each vehicle divided by two shifts each supported by 12 volunteer ham radio operators. There are 20 stages to this event and they do run through the night, hot, cold, high winds and rain.

If this event interests you and you would like to volunteer, please contact KI6CCW (a)t arrl (dot) net. More about the Baker to Vegas Challenge Cup Relay is on-line at www.bakervegas.com. (KI6CCW)

**

PUBLIC SERVICE: THE BOSTON MARATHON AND HAM RADIO

Amateur radio volunteers are also be needed for communications assistance for the April 19th Boston Marathon. The 26 mile course follows a route from rural Hopkinton to Boston. Marathon Amateur Radio Communications is a

consortium built on the cooperative efforts of the Framingham Amateur Radio Association and Minuteman Repeater Association. These clubs work together to provide radio communications along the entire route of the event. If you want to volunteer for this one just take your web browser to www.mmra.org/marc and follow the instructions to sign up. (K1KW)

**

NAMES IN THE NEWS: UTAH HAM AND TEACHER HONORED BY GOVERNOR

Some names in the news. First up is Glen Westbroek, KD7LLE, who is an Orem, Utah, ham radio operator and Junior High School science and technology teacher. Westbroek was one of seven recipients presented with the Governor's Medal for Science and Technology at a January 5th ceremony in Salt Lake City.

According to a news release from the Governor's Office of Economic Development, Westbroek has taught at Orem Junior High since 1995 and has traveled the state sharing his expertise. He received the award for his contributions to professional teacher development in Utah's science core as well as for his creation of "Sci-ber Text." "Sci-ber Text" is Utah's online textbook for grades 3 through 9.

Westbroek was presented the award personally from Utah Governor Gary Herbert. The online "Sci-ber Text" created by KD7LEE can be found at http://utahscience.oremjr.alpine.k12.ut.us. (Provo Daily Hearald)

**

NAMES IN THE NEWS: 2009 YASME EXCELLENCE AWARD WINNERS NAMED

The Directors of The Yasme Foundation have announced the recipients of the 2009 Yasme Excellence Awards. Those named include Jamie Dupree, NS3T, for his creation of the Radiosport Web site; Bob Bruninga, WB4APR, for the invention of APRS and George Wallner, AA7JV and Tomi Pekarik HA7RY for their DXpeditions to Mellish Reef.

Also named are Tursoon-Zadeh, EY8MM who created central Asia beacons on 160 and 6 meters, Don Hill, AA5AU for his leadership in RTTY contesting and Rich Strand, KL7RA. Strand was the driving force behind the highly successful W1AW/KL7 and KL5O operations, both of which highlighted a resurgence in Alaskan contesting and DX activity.

The YASME Foundation say that these awards will be presented from time to time as the board feels appropriate. They will be given for service and dedication to amateur radio as recognized by the foundation's directors. (N7NG)

EMERGING TECHNOLOGY: E-COUPONS AND INSTANT DISCOUNTS GAINING IN POPULARITY

its new to the general public but not to amateur radio. Jim Meachen, ZL2BHF, has the latest on instant discounts and electronic coupons:

--

Electronic coupons, arriving by cell phone, e-mail and posted on social networking websites are helping generate new business among younger customers.

According to coupon processing company Inmar Inc., use of electronically generated discounts by those under 30 has more than doubled in the first half of 2009 compared with the same period last year. They now account for more than 3 percent of all coupons used. That's up from roughly 2 percent in 2008.

Electronic coupons offer the same benefits for retailers as any discount program. This equates to increased consumer traffic, increasing sales, building loyalty, and attracting new customers. Best of all from a merchandising standpoint is that potential customers can print digital coupons from Web sites or e-mail, and eliminating the cost of postage to the company making the offer.

Im Jim Meachen, ZL2BHF.

--

We should add that electronic coupons and instant discounts are not new in amateur radio as many hams are well aware. Many manufacturers have been offering one or the other for years. (EIN)

**

HAM RADIO IN SPACE: SEEDS CO-66 IN A NEAR MISS

In heam radio space related news the Japan Amateur Radio League website is reporting that part of a Russian rocket came close to the SEEDS CO-66 amateur radio satellite. The near miss occurred on January 7th when the rocket body is said to have come within 100 meters of the ham radio bird. No damage occurred to SEEDS from the incident. You can monitor CO-66 on 437.485 MHz using either CW running 110 milliwatts or FM with 450 milliwatts out. (JARL)

**

HAM RADIO IN SPACE: HAM LEAD GROUP TO BUILD EUROPEAN GPS SATELLITE SYSTEM

Surrey Satellite Technology in the United Kingdom which is headed up by Martin Sweeting, G3YJO, has been awarded a contract to build 14 spacecraft in cooperation with O-H-B in Germany. This, for the Galileo Satellite Navigation project.

The contract was announced by the European Commission in Brussels. The Galileo project is intended as an the European Union's version of the US Global Positioning System but also implementing a number of significant improvements. This will mean that it should give users quicker, more reliable fixes, and enable them to locate their positions with an error of one meter as compared with the current GPS error level of several meters.

Plans are to have the satellites coming off the the production line in the second half of 2012. Arianespace will use Russian-built Soyuz rockets to launch these global positioning spacecraft in batches of two. System planners say that by early 2014 there could be up to 16 spacecraft in the Galileo network. That they say is enough to make a significant difference to users with Galileo and GPS-enabled receivers. (G1LKJ, BBC, SpaceHorizons)

**

RADIO IN SPACE: KEPLER SPACE TELESCOPE DISCOVERS 5 NEW PLANETS

The orbiting Kepler Space Telescope has spotted five new planets that range in size from about the diameter of Neptune to that of Jupiter orbiting stars that are hotter and larger than the Sun.

The newly discovered planets are located in distant parts of space. Data radioed back from orbital space observatory shows them to be real and distinct entities.

NASA dubbed the planets Kepler 4b, 5b, 6b, 7b, and 8b. Spokesman Jon Morse, says that these are only the first of many Kepler discoveries rolling off the assembly line.

Kepler was launched March 6th with a mission to spend the next three years hunting for Earth's sister planets. NASA says that this telescope will improve its chances by focusing on planets that are similar to Earth in size and are located at a distance from their sun that would permit the existence of water. (NASA)

**

WORLDBEAT: UK POLICE SUE OVER RADIATION EXPOSRE FROM TWO-WAY SETS

Some United Kingdom police officers say that they are preparing to sue their own force. This, over a series of illnesses they claim were caused by the radio system they use while out on patrol.

According to the on line edition of the London Telegraph, the Lancashire Constabulary was the first in Great Britain to try out the Airwave network, designed specifically to have longer range and more capacity to the emergency services and the military. Nine years after its introduction scores of officers are claiming that radiation emissions from the system

have caused them to suffer such ailments as nausea, headaches, stomach pains and skin rashes.

The local branch of the Police Federation has logged 176 individual complaints. now senior officials at the police authority are seeking legal advice on how to deal with them. In fact, they have already made budget changes to allow for a contingent liability in respect of Airwave liability claims. You can read the full Telegraph article at www.telegraph.co.uk/health/healthnews/6920973/) (G3RZP, Southgate)

**

WORLDBEAT: DUTCH STATION PC600P CELEBRATES PURMEREND

The Dutch city of Purmerend was founded 600 years ago and now local radio amateurs will activate the special call PC600P three times in 2010 to commemorate this event. The dates are January 1st to the 27th, May 1st to the 28th and from Sep 1st to the 28th. PA3HGP is the QSL manager. He will confirm all QSOs via bureau automatically. Cards are also available as eQSL or via Logbook to the World.

**

WORLDBEAT: 2010 ANTARACTIC ACTIVITY WEEK

The 7th annual Antarctic Activity Week to celebrate Antarctica takes place from February 22nd to the 28th. It planners say that this years event could be better than previous years with many more stations advising of their intended participation, and the hope of an improving solar cycle. More information on this event is on-line at www dot waponline dot it.

**

ON THE AIR: POLAND, SPECIAL EVENT STATION COMMEMORATES CHOPIN

On the air, the special call 3Z0FCH will be active until June 30th. This in remembrance of Polish composer and pianist Fredric Chopin who would have celebrated his 200th birthday this year.

Fredric Chopin was born on March 1st 1810 and passed away on October 17, 1849. During his short lifetime he learned piano and most of his compositions such as his Piano Concerto No. 2 in F minor were written primarily for the as solo for that instrument. Because of this he is responsible for major innovations in the piano sonata, mazurka, waltz, nocturne, polonaise, and prelude.

Now in memory of the man and in celebration of his music 3Z0FCH is on the air. If you make contact, please QSLs to SP7PAD either direct or via bureau.

**

DX

In DX, seven hams have formed a multi-national group for a planned DXpedition to Kurdistan from April 3rd to the 11th. They will have ten day visas issued by the Government of Kurdistan ad plan to operate 160-10 meters using the callsign YI9PSE. Modes will be CW, SSB and RTTY. They will have at least 3 stations on the air with AA6G acting as their pilot. QSL will be via N6NKT. Further information can be found at www dot yi9pse dot com

RA4LW, will be active from Moldavia as ER4KAA during the CQ 160 Meter CW Contest from as a single operator high power entry. Operation is January 29th to the 31st and QSL only direct via his home callsign.

VE6LB will be operating portable A6 from Dubai through February 8th holiday style in CW on 40 through 15 meters. He has 100 watts into a G5RV antenna. QSLs direct to his home call or electronically via Logbook to the World.

E70A who has been active from Djibouti as J28OO since November of 2007 has changed his callsign to J28AA. He operates CW, SSB and RTTY on 80 through 10 meters with an emphasis on 80, 40 and 20 using Morse. His QSL manager is K2PF, either direct or Logbook to the World.

UA1PAW is now operating as R1ANR from Novo Runway in Antarctica and is expected to be there until the end of February. With the higher band closed due to bad propagation, look for him at about 20.00 UTC on 40 meters. His QSL Manager is ZS1ANF.

Lastly, YO8TLC will be active as 8Q7CE from the Maldives until January 25th. He plans to operate holiday style on 40, 30 and 20 meters, mainly CW and some SSB. QSL via his home call either direct or via the bureau.

**

THAT FINAL ITEM: OLD TIME RADIO: AM TRANSMITTER RALLYE FEBRUARY 6 - 7

And finally this week, if you are a fan of old time heavy iron ham radio transmitters, or at least those that sound like heavy iron, listen up. The 2010 A-M Transmitter Rally will take place the weekend of February 6th to the 7th. Festivities begin at 6:00 AM Eastern Standard Time on the 6th and run until 2:00 AM the following morning. And if you have not heard what good A-M sounds like on the ham bands, you are in for a treat because it sounds like this:

--

Actual contact audio. Hear it by downloading the MP3 file at www.arnewsline.org

--

The 2010 A-M Transmitter Rally will be on 160 through 10 meters on the usual A-M frequencies. The purpose of this event is to encourage the use of Amplitude Modulation on the ham bands, and to highlight various types of AM equipment in use today. This event is open to any and all radio amateurs who are running full carrier amplitude modulation AM and any type

of equipment may be used. Complete details with scoring, awards, logbook templates, and additional information is at www.classeradio.com slash amtr dot pdf

(WA3VJB)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

I've been trying to find things like internal resistance and current capacity on those things, but mostly DIY articles show up. Anyone know any web based sources of that info?

Anyhoo, it might be an interesting homebrew experiment, maybe getting qrp level wattage out of a bank of those cells.

68. RTTY questions

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-17 23:28:53 UTC
From: Jeffrey D Angus <jangus@suddenlink.net>
Message-ID: <hj04n5011tn@news7.newsguy.com>
Source record: 1690

There doesn't seem to be as much RTTY activity theses days as
there once was. But considering the rise of other HF digital
modes, that's hardly surprising.

Can I see a show of hands (or keyboards) to those of you out
there that still get on RTTY at least occasionally?

Are you running iron or glass TTY machines?

Are you adhering to the standard 170 Hz shift with either a
home brew TU or production TU like a HAL unit? Or are you
using 200 Hz shift with a PK-232 or Kam (as an example)?

When was the last time you were on?

I used to run RTTY back in the late '70s on 145.850 AFSK
back when FM was limited to 146 and above. ;-)

In the '80s I ran a Model 19 table set and later a model 32
with a HAL ST-6000

And yes, I'll admit to getting on a few times with the KAM
in the '90s but I also played with the HAL PCI-3000 card.

Just curious to see what's doing on RTTY these days.

This is from Wikipedia:
http://en.wikipedia.org/wiki/History_of_the_battery#1800_-_The_Voltaic_Pile

"Another problem with Volta's batteries was short battery life (an hour's worth at best), which was caused by two phenomena. The first was that the current produced electrolysed the electrolyte solution, resulting in a film of hydrogen bubbles forming on the copper, which steadily increased the internal resistance of the battery (This effect, called polarization, is counteracted in modern cells by additional measures). The other was a phenomenon called local action, wherein minute short-circuits would form around impurities in the zinc, causing the zinc to degrade."

It's interesting that you don't hear much, Jeff. In the contesting world a lot of people get angry at the rtty'ers for taking up a lot of bandwidth.

Anyhow, I use RTTY, but do it via computer. I usually use 200 shift.

The mode is okay, but I have one small complaint, which actually extends to other modes. T mny abrtns! The thing I like about PSK31 is that we type mostly english. We do the standard 73's and sk, which although not really related to the mode, is kind of ingrained into Hams by now, but for the most part type the words me mean into the machine the same way they are spelled in the dictionary. Just a minor rant. Otherwise I like the mode just fine.

I understand that during the heyday of machine RTTY, they used to send pictures that we computer people called "ascii art"

Oh yeah. I hadn't thought about that in years. There used to be some pretty fancy ones floating around. Naturally you needed a very good signal to send them via actual radio, since a minor loss of signal would mess up the artwork pretty well.

A short, true, but not ham-radio story: Years ago, when the TTYs had paper tape punches attached, one of our engineers decided to punch a numeric-control tape using a file that he had stored in his computer account. He punched it, put it on the numerically-controlled drill press, and proceeded to ruin a nice hunk of metal. He came in and asked us what the problem could possibly be. We ran the tape through the printer and got the expected garbage typed out, until suddenly up popped:

THE SYSTEM WILL GO DOWN FOR MAINTENANCE IN FIVE MINUTES. PLEASE LOG OFF

Way back when I was a student at The University, we had quite the RTTY setup at W3ABT. S-line, TT/L demod, Model 19 printer with punch and reader, patch panel for other things, Heath monitor 'scope set up for two-loops indication, the works. Had some of that art, too. I still have one piece of it somewhere, too.

We knew what "chads" were back then.

Among other antennas, we had four elements on 20 meters on a tower on the roof of the Moore School, where the shack was located. Among other things, that was where the world's first high-speed, general-purpose, digital electronic computer (ENIAC) was designed, built, and put into operation until being moved to Aberdeen, MD.

In QST about 1963 or so there was an article about various RTTY tricks. One of them was a way to make the paper tape spell out letters in the holes. If you ran the tape through a printer it looked like garbage but if you looked at the tape itself the message was perfectlyclear.

Some folks could even do a form of music using the bell and LTRS/FIGS keys. Early techno?

Ah, the smell of hot oil...

Some contesters would complain that you're wasting air that they
should be breathing.

> Anyhow, I use RTTY, but do it via computer. I usually use 200 shift.

Which was one of my original questions.

Amateur RTTY back in the beginning used 850 Hz shift and was finally
brought down to 170 Hz shift as equipment improved enough to be able
to stay tuned.

The use of 200 Hz shift was a result of using a Bell Modem standard
for early data transmissions over the phone lines in the "new" all
mode terminal units. This was a compromise to incorporate RTTY into
the units, rather than a terminal unit specifically designed for
RTTY operation.

> The mode is okay, but I have one small complaint, which actually
> extends to other modes. T mny abrtns!

This is a pet peeve of mine. This is a written medium. Please
use English, and make an attempt at proper spelling, grammar
and punctuation.

I can understand abbreviations being used in a slower mode.
(And no, I'm NOT bashing Morse code) Especially in traffic
handling situation with a lot of repetitious messages being
sent.

Although, I will make exceptions for the few people I've had
a QSO with on RTTY that typed painfully slow. ;-)

==> + HAITI EARTHQUAKE: DOMINICAN HAMS ATTEMPT TO INSTALL REPEATERS IN
HAITI

Members of the Radio Club Dominicano (RCD) -- the Dominican
Republic's IARU Member-Society -- and Union Dominicana de Radio
Aficionados (UDRA) arrived in Haiti late last week to install an
emergency radio communications station and a mobile station. Shortly
after they arrived, the hams returned to the Dominican Republic for
safety reasons.

"Within a few hours though, reports via the RCD Facebook page reported
that the HI8RCD team of eight amateurs was back in the [Dominican
Republic] border town of Jimani," said IARU Region 1 Emergency
Communications Coordinator Greg Mossop, G0DUB. "Their convoy, which
included other non related Dominicans, was assaulted. The radio
amateurs are uninjured, but they decided to leave the capital for
safety [reasons] and return to the border unescorted. They report the
situation as 'extremely unsafe.'"
```

The team was able to install two VHF repeaters: one in the Dominican Republic border town of JumanÃ and another Port-au-Prince. Mossop said that these repeaters have been used by the Red Cross and Civil Defense since, until quite recently, there has been no other way to communicate. The station at the embassy in Haiti could not be activated.

"The HI8RCD team of amateurs is still in JumanÃ, where many wounded are arriving," said IARU Region 2 Secretary RamÃ³n Santoyo, XE1KK. "They are helping Haitians to contact their relatives and friends outside of Haiti, but they can't help the world to find specific individuals in Haiti. They are receiving many e-mails with such requests, but security and road conditions make impossible to look for specific individuals in Haiti at the present." Read more here <http://www.arrl.org/news/stories/2010/01/18/11293/?nc=1>.

==> + ARRL LEADERSHIP: BOARD RAMPS UP FOCUS ON EMCOMM ISSUES, LOOKS TO LEAGUE'S CENTENNIAL

<http://www.arrl.org/news/stories/2010/01/16/11292/?nc=1> The ARRL Board of Directors held its 2010 Annual Meeting on January 15-16 in Windsor, Connecticut, under the chairmanship of President Joel Harrison, W5ZN, to consider and act on a number of recommendations from committees, as well as motions by Directors. With the election of ARRL First Vice President Kay Craigie, N3KN, as the League's 15th President, the 2010 Annual Meeting of the ARRL Board of Directors was off to a fast-paced start. Craigie, who ran unopposed, takes over the top leadership position from Harrison, who in October announced that he would not be seeking re-election. Craigie officially took office as President at the adjournment of the Annual Meeting. Read more here <http://www.arrl.org/news/stories/2010/01/19/11294/?nc=1>.

==> + PUBLIC SERVICE: HAM HELPS OUT IN RIVERSIDE COUNTY DESERT RESCUE

On the afternoon of Saturday, January 16, Christopher Walsh, KJ6BBS, of Irvine, California, was listening to radio traffic on 446.760 MHz, a channel used by the Los Angeles area-based Pocket Auto-Patch Association (PAPA) system -- an Amateur Radio network of 22 interlinked analog and digital D-STAR repeaters that provides extensive coverage of the Southern California region and beyond -- when he heard an emergency radio call break from Jose Hernandez, KI6PCK, of Thousand Oaks, California, reporting an injured male who had broken some ribs from an ATV-type accident. Read more here <http://www.arrl.org/news/stories/2010/01/20/11296/?nc=1>.

==> ARRL RECOGNIZES: BOARD RECOGNIZES OUTGOING ARRL PRESIDENT JOEL HARRISON, W5ZN

After more than 27 years of elected volunteer service to the ARRL, outgoing ARRL President Joel Harrison, W5ZN, has retired. In recognition of his dedication to the League over nearly three decades, the ARRL Board of Directors bestowed their thanks in the form of an engraved plaque. Presented by incoming President Kay Craigie, N3KN, on

behalf of the Board, the plaque recounts Harrison's elected service to the ARRL: Arkansas Section Manager, 1983-1988; Delta Division Director, 1988-1996; Vice President, 1996-2000; First Vice President, 2000-2006, and President, 2006-2010.

==> + ARRL RECOGNIZES: ARRL BOARD BESTOWS AWARDS AT 2010 ANNUAL MEETING

The ARRL Board of Directors had the pleasure and distinction of bestowing two annual awards at its 2010 Annual Meeting -- the inaugural George Hart Distinguished Service Award and the Bill Leonard, W2SKE, Professional Media Award. The Hart Award -- established by the Board at its 2009 Second Meeting -- is named in honor of George Hart, W1NJM, who served as Communications Manager at ARRL Headquarters and was the chief developer of the National Traffic System (NTS). The award is conferred upon an ARRL member whose service to the League's Field Organization is of the most exemplary nature. Selection criteria include the nominee's operating record with the National Traffic System, participation within the Amateur Radio Emergency ServiceÂ® (ARESÂ®), or station appointments and/or leadership positions held within the ARRL Field Organization.

The Bill Leonard, W2SKE, Professional Media Award is a national level award given each year to honor three professional journalists whose outstanding coverage in audio, video and print formats best reflect the enjoyment, importance and public service value of the Amateur Radio Service. Read more here <http://www.arrl.org/news/stories/2010/01/21/11300/?nc=1>.

==> + NEW ARRL WEB SITE COMING SOON!

It's almost here! After more than two years of planning, designing and writing, we are eagerly awaiting the launch of the new ARRL Web site. We've been able to make the online experience easier for our members -- from the online store, to registering for a class, to finding a club -- plus we've created a new, enhanced member profile with many more options available. We've made improvements with you in mind, making sure that our members will have the easiest, most enjoyable online experience possible. The new Web site will be available the first week of February.

==> + NOW YOU KNOW!: THE ARRL AMATEUR AUXILIARY

By ARRL News Editor S. Khrystyne Keane, K1SFA

The Amateur Auxiliary is composed of approximately 700 ARRL volunteer-appointees known as Official Observers (OO <http://www.arrl.org/FandES/field/org/oo.html>). Located across the country, they monitor the bands and notify amateurs of technical and operating discrepancies as a service to their fellow hams. Time and again, the FCC has indicated the responsibility to keep our operating standards and spectrum in shape rests with the Amateur Service. The Amateur Auxiliary program and its OOs are the League's answer to this challenge.

The OO Program has four main objectives: to foster a wider knowledge of and better compliance with the FCC rules; to extend the concepts of self-regulation and self-administration in the Amateur Service; to enhance the opportunity for individual amateurs to contribute to the public welfare, and to enable the FCC's Enforcement Bureau to efficiently and effectively utilize its limited manpower and resources. The role of the Amateur Auxiliary is to provide an unbiased forum for technical and operational advice and other assistance to amateurs who are receptive. The task is not to find fault or lay blame. It is to identify cause and effect, many of which are not based upon technical, but behavioral or social issues, as well as to find ways to achieve solutions to promote good amateur operating and engineering practice on our bands.

Even though you might consider yourself a good operator (and don't we all consider ourselves to be good operators?), you might receive an OO Notice. If you do get one, don't worry! The OO post card is simply a friendly note to alert you to possible equipment factors or operating practices that might have contributed to an apparent departure from a rule or the good amateur practice standard. Remember, OOs are friendly helper-advisors; their mission is to assist those who are receptive to being assisted. You do not need to reply to the notice, but you may want to take a few minutes to determine what caused the apparent problem and then take steps to fix it. Your corrective actions might even head off an FCC "pink slip" down the road (which, by the way, are not pink!).

Keep in mind that OOs are advised to avoid hair-splitting and to deal only with black-and-white rule discrepancies only. For example, an OO should not send a notice to someone who forgot to identify his station for 10 minutes and 8 seconds! If you feel that the OO sent you a notice that violates the principles of the program, send a copy to your Section Manager <http://www.arrl.org/sections/> or to Headquarters <k0bog@arrl.org> for evaluation and possible action -- quality control is critically important in a program as sensitive as this one.

To emphasize the positive nature of the Amateur Auxiliary Program, OOs will also send out "Good Operator Reports" to those operators whose radio signals and/or operating practices are consistent with the highest standards and are a model for others to follow. Every amateur should strive to pattern their operating and signals after your example.

Prospective OOs must pass a comprehensive examination based on a set of study materials before they can be certified as members of the Amateur Auxiliary; they must also be an ARRL member and be licensed for at least four years. If you are interested in becoming an OO, contact your Section Manager <http://www.arrl.org/sections/>. Now you now!

==> SOLAR UPDATE

Tad "Whose dwelling is the light of setting Suns <http://www.bartleby.com/145/ww138.html>" Cook, K7RA, reports: We saw

just one day with a blank Sun this week -- Tuesday, January 19 -- when sunspot group 1040 moved over its western limb. New sunspot 1041, which is really old sunspot group1039, emerged from the east, bursting with solar flares (five so far) and as a result, both the planetary and high latitude K index jumped to 5 at 1800 UTC on January 20. The M-class solar flare on Wednesday caused an SID, or Sudden Ionospheric Disturbance, and Friday's bulletin will talk about a Stanford University project encouraging homebrew SID detectors for ham station and classroom, allowing you to detect these events when they happen -- no more guessing as to why your receiver suddenly seems dead. Look for more information in the Solar Update, available on the ARRL Web site on Friday, January 22. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Wordsworth's Lines Written a Few Miles Above Tintern Abbey <http://www.bartleby.com/145/ww138.html>.

==> + ARRL PUBLICATIONS: THE 2009 ARRL PERIODICALS ON CD-ROM NOW SHIPPING

The 2009 ARRL Periodicals on CD-ROM <http://www.arrl.org/catalog/?item=1486> is now available and includes the complete 2009 fully searchable collection of three ARRL journals -- QST <http://www.arrl.org/qst>, QEX <http://www.arrl.org/qex>, and the National Contest Journal (NCJ <http://www.arrl.org/ncj>). In addition, the CD-ROM includes source code for software projects and PC board patterns, Section News, as well as the ever-popular Contest Soapbox and Contest Results. Search the full text of every article by entering titles, call signs or names. See every word, photo -- most in color -- drawing and table in technical and general-interest features, columns and product reviews, plus all advertisements. Print what you see, or copy it into other applications. System requirements: Microsoft Windows and Macintosh systems, using the industry standard Adobe Acrobat Reader software. CD-ROMs for other years are also available <http://www.arrl.org/catalog/?category=What%27s+New&words=periodicals>.

==> THIS WEEK ON THE RADIO

This week, be sure to check out the ARRL January VHF Sweepstakes <http://www.arrl.org/news/stories/2010/01/13/11282/?nc=1> on January 23-25. On January 22, there is a running of the NCCC Sprint. Look for the YL-ISSB QSO Party (SSB), the MIE 33 Contest and the BARTG RTTY Sprint on January 23-24. The SKCC Sprint is January 27. Next week, there is another running of the NCCC Sprint on January 29. The CQ 160 Meter Contest (CW) is January 29-31. The REF Contest (CW), the UBA DX Contest (SSB) and the SPAR Winter Field Day are January 30-31. The Classic Exchange (CW) is January 31-February 1. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + SILENT KEY: CQ MAGAZINE COLUMNIST DAVE INGRAM, K4TWJ (SK)

Dave Ingram, K4TWJ, who penned the "World of Ideas" and "How It Works" columns in CQ Magazine, passed away Wednesday, January 20, from complications due to a heart attack late last year. He was 67. A writer and columnist at CQ since 1981, Ingram -- an ARRL member -- began his career at the magazine writing the amateur television "World of Video" column that later morphed into the "World of Ideas," covering code keys, stealth antennas, building "new vintage" tube gear, mobiling and more. Ingram also served as CQ's QRP Editor. "His enthusiasm for whatever caught his interest was contagious and spread widely through his informal, yet educational writing style," recalled CQ Managing Editor Rich Moseson, W2VU. Ingram also wrote for RadCom -- the Radio Society of Great Britain's member journal -- and other international ham magazines. Funeral arrangements are pending. -- Information provided by CQ Magazine

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, January 24, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, February 10, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

79. operating mode?

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-22 05:49:00 UTC
From: Beachbum <northshore-beachbum@hawaii.rr.com>
Message-ID: <hjb6h6gln1@news.eternal-september.org>
Source record: 1551

At the risk of exposing my newbness...

I am considering a tech license and note references to "permission" levels for various bands, as well as indications of certain operating modes for particular freqs/bands (I have not bought a manual yet, still trying to determine what level of total investment will be necessary for my desired use). Based on admittedly cursory review thusfar, it appears voice comms have limited availability for a tech ticket. IF that is the case, my primary interest is in emergency voice comms during regional events...will I need to upgrade to a general license for effective use?

TIA

80. Antennas and CCRS

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-22 05:50:50 UTC
From: Jeffrey D Angus <jangus@suddenlink.net>
Message-ID: <hjauph012fk@news5.newsguy.com>
Source record: 1552

I was reading the Feb 2010 copy of QST at dinner this evening.
And right there in the "Up Front" section was a wonderful
article about "How I defied the CCR I signed when I bought my
condo and put up an antenna in contradiction to the rules I
agreed to."

Do we all have to act like having an FCC grant (license)
somehow makes us above the law?

Sooner or later, the homeowner associations are going to
catch on about bird houses, flag poles and the like and
just simply write into the rules, "No transmitting or
receiving equipment."

And we'll have brought it on ourselves by constantly showing
our inability to follow the rules.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

82. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-22 07:05:01 UTC

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Amateur Radio Newsline(tm) Report 1693 - January 22, 2010

Amateur Radio Newsline report number 1693 with a release date of
Friday, January 22, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams come under gunfire as they try to
assist earthquake devastated Haiti, amateur radio is victimized by
rescue radio hoax in Arizona and the ARRL makes history by electing its
first ever woman president. Meet her on Amateur Radio Newsline(tm)
report number 1693 coming your way right now.

RESCUE RADIO: HAMS ATTACKED IN HAITI

Hams trying to bring communications back to Port au Prince Haiti were
forced to flea for their lives. This after the convoy they were a part
of was attacked by what was likely a roving band of looters. Bill
Pasternak, WA6ITF, is in the newsroom with the latest:

--

Radio amateurs from Radio Club Dominicano who were to be in Haiti under
the callsign HI8RCD/HH have had to abort their operations. This, after the
convoy they were travelling in was fired on.

The RCD initially reported that on Friday, January 15th, that their team
had crossed the Haitian border and headed toward the Dominican Embassy in
Port au Prince. Once there they then began installing ham radio equipment
but had to abort and flee the area when gunfire erupted.

Within a few hours the RCD Facebook page reported on a telephone
conversation between Hugo Ramï¿½n HI8VRS and Ramon Sanyoyo, XE1KK. There it
was confirmed that all 8 members of the HI8RCD team were back in the border
town of Jimani in the Dominican Republic. None of the hams had been
injured but decided to leave the Port au Prince for their own safety and
returned across the border unescorted.

Later they were able to establish two repeaters near the Haiti and
Dominican Republic border. One is at Jimanï¿½ on 146.880 MHz covering
Dominican Republic Border and most of Haiti including Port-Au-Prince. This
system is linked with 146.970 MHz covering 85% of the Dominican Republic
and the west of Puerto Rico. Other reports say that a third repeater near
the Dominican Republic border with Haiti is now operational on 145.350
MHz. All machines require a -600 kHz transmit offset and 100 hertz tone

for access.

In other Haiti relief news, YV5AMH has e-mailed Newsline to say that two Venezuelan hams identified as YV5JF and YV5VE, were to be operating from a base located 5 Km west of Port au Prince after January 20th. This operation is coordinated between the Radio Club of Venezola and the Office of Communications of the Bolivarian Army. It is strictly in support of Venezuelan humanitarian aid to Haiti. The Venezuelan hams plan to use SSB, BPSK-31 and SSTV on several frequencies in the 80, 40 and 20 meter bands but the exact nature of the communications services that they will be providing was not spelled out in the news release from YV5AMH.

And looking down the pike as it were, as time goes on the need for ham radio High Frequency communications is fast declining. This as satellites are repositioned to quickly restore both international telephone and Internet service to Haiti for aid workers to use.

What is expected to emerge ham radio-wise is a need for more bi-lingual emergency communications operators using 2 meter FM and possibly D-Star for on-island communications as the overall infrastructure of Haiti is rebuilt. Its believed that one group is already in route to Port au Prince to install a 2 meter D-Star machine that could become operational this week.

Also, to those foreign nationals inquiring about obtaining permission to operate ham radio in Haiti. It has to be noted that Haiti is not a signatory to any reciprocal licensing agreement. Also, the building that housed the Haitian Telecommunications Ministry was destroyed by the quake and a number of staff members lost their lives. So at this moment in time there is no way to get a Haitian license or operating permit. Those who might eventually be asked to come should coordinate licensing through the organization making the request.

While several amateur radio groups report that they are ready to send trained operators and communications gear into Haiti, as we go to air there has been no call for hams from the United States, Canada nor any European nation has yet been asked to make the trek. There are several reasons that have emerged. First is the question of language. In recent days it has been reported that any relief workers that are brought to Haiti will have to be fluent in Creole French as that's the language of the indigenous population.

More important is what you are seeing daily on your TV screen. With the chaos in the street, the looting and random violence, Haiti is not a safe place to be without a military escort. And the military is not about to spend its times babysitting hams. Even those hams tasked with rescue radio operations.

More on this story next week. I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The bottom line. Haiti remains a very dangerous place and its best not to encourage anyone to even think about a self-deployment scheme. This is not a time nor a place for want-to-be heroes, no matter how important that they think their assistance might be. Going there on your own might mean that you will never be seen or heard from again.

**

RESCUE RADIO: HAMS VICTIMIZED BY ARIZONA MAYDAY HOAX

Back in the United States, reports of an injury accident in the desert near Maricopa, Arizona prompted a three hour search that began after an unknown station turned up on several 2 meter frequencies requesting help. And it now all appears to be a cruel hoax as we hear in this report from Amateur Radio Newsline's Norm Seeley, KI7UP:

--

David French, W7FAN, tells Newsline that on Sunday morning, January 17th a unknown operator showed up on several 2 meter frequencies. The unidentified station claimed to have been in a desert motoring accident and in need of help.

The story begins at 10:35 a.m.. That's when Richard Dabney, K6BZZ, in Maricopa was in QSO on the Phoenix 146.94 White Tanks repeater when the unidentified station interrupted his contact to request help. The station then said "Mayday, Mayday, Mayday" and gave information that he and his father were in the desert in a dune buggy and had rolled it over. The operator also stated that his father was a ham and that it was his father's radio that was being used.

The person on the radio stated that he was injured and the passenger was unconscious. He also made comments that led KB6ZZ to assume that the father was the passenger and gave some GPS coordinates before his signal faded out. The initial 911 call was made by K6BZZ.

At 10:45, Dennis Griffin, KD7CAC, copied a station breaking into a special event net on the 146.86 Mt Ord repeater located North-East of Phoenix and also requesting assistance. As there was a public service event taking place on the .86 machine he was moved the station to the 147.36 repeater also on Mt Ord. There, KD7CAC copied pretty much the same information as had KB6ZZ before the station again faded out. Griffin also alerted authorities, This time the Pinal County Sheriff's Dept via its 911 emergency exchange.

Unfortunately, neither operator thought to request a callsign or name on initial contact and the station was gone before they could follow-up. But the GPS coordinates he gave both operators tracked to an area of desert wilderness southwest of Maricopa.

In response, authorities established a command post at the Vija Truck Stop at State Route 84 and Interstate 8. Units from the Pinal County Sheriff's Office and Arizona Department of Public Safety Search and Rescue combed the area, but turned up nothing.

Later in the afternoon, a new set of coordinates was obtained which put the accident scene near Ajo. Pima County officials were notified, but their subsequent search yielded no results as well.

Authorities now believe that the distress calls were a cruel joke being played on the local ham community by a person and for reasons yet unknown. None the less, Maricopa, Arizona, hams proved that they could respond quickly when an emergency situation came their way, even if that emergency turned out to be a phony call for help.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting from Scottsdale.

--

News reports say this is the second such hoax local authorities have received. As with the use this time of ham radio frequencies the motives for the bogus calls are unknown. (W7FAN, Maricopa 360)

HAM RADIO POLITICS: ARRL ELECTS KAY CRAIGIE, N3KN AS ITS NEW PRESIDENT

A historic day in the history of the American Radio Relay League. This as the Board of Directors elects First Vice President Kay Craigie, N3KN, of Blacksburg, Virginia, as the organization's first ever female president. Amateur Radio Newsline's Mark Abramowicz, NT3V, is at our East Coast Bureau with the details:

--

Kay Cragie says she is humbled to have been elevated to such an honor and is pleased the ARRL board had the confidence to entrust her with such an awesome responsibility.

Craigie, who began her service to the ARRL and its membership in 1986 as the Eastern Pennsylvania section manager, says she also recognizes the legacy of her predecessors.

"If you stand in the lobby at ARRL headquarters, you see photographs of all the presidents of ARRL going all the way back to Hiram Percy Maxim, W1AW," Craigie says. "I'm here to tell you when you think about joining that list of amazing, outstanding radio amateurs, if it doesn't throw you for just a little bit of a loop there's something wrong with you.

"Because these are people who had a tremendous contribution to amateur radio and I am just unbelievably honored to be joining that group."

Craigie moved up the ARRL ladder pretty quickly, becoming the Atlantic Division vice director in 1990 and then director in 1996.

N3KN was elected a vice president in 2000, and moved up to first vice president in 2006.

Craigie says during that time, she got the chance to work on many of the challenges facing the amateur radio service.

"We were believing that Part 15 devices were going to be a challenge for amateur radio," Craigie recalls. "Boy were we right. The whole issue of broadband over powerlines - not so much BPL but the interference that BPL can create - has been a real issue for us over the last several years. We're still working on that one."

"Another challenge that we're now seeing is the increasing demand for spectrum for mobile broad-band," she continues. "I have a Smartphone, lots of radio amateurs have Smartphones. We're using them. They gobble up a great deal of spectrum to serve us the way we want them to.

"And, the ARRL's job is to make sure that meeting the needs of that industry doesn't cut into the spectrum that amateur radio operators have to use and to experiment with."

Craigie says one of the big efforts she is committed to is attracting more qualified and dedicated people into the amateur radio service.

"We're making good strides on that, thanks to the efforts at the grass roots by individual instructors and radio clubs and groups who are getting out the word about amateur radio and helping people become licensed," Craigie says.

"Of course, we'd like to have more younger people involved in amateur radio. Amateur radio is a fellowship based on achievement. Everything else is just a demographic factoid, really.

"Achievement is the key and that's why amateur radio is so good for young people in that it stimulates them to achievement of a very positive and constructive kind and the League wants to do what we can do in cooperation with local hams to promote more young people getting involved in amateur radio."

Craigie - now a retired educator - was tasked to develop what became the league's Education and Technology program. She says it continues to work on a number of levels.

"This project is ongoing, it's successful, it has achieved things beyond my wildest dreams," Craigie says.

"And the League is very pleased to continue to offer school teachers the skills and the knowledge that they need to bring amateur radio into the classroom and help kids get excited about education, excited about science,

about technology about social studies, about languages - all the different things that you can use amateur radio to support in the classroom."

Finally, Craigie says, one of her top priorities is to continue to promote the valuable public service role of amateur radio.

"When you have situations where infrastructure is crippled, overloaded, amateur radio, as we say, is what works when all else fails," Craigie says. "And, in the circumstances like what we have in Haiti right now, of course, it's tremendously dangerous.

"We've seen news stories about amateurs who have attempted to help and then had to fall back to safer positions. But, amateur radio for the foreseeable future will be in a position to assist the authorities and to assist charitable relief agencies to help the public.

"Whether it's helping the public in our own communities, elsewhere in our country or in some cases, around the world. And we certainly commend the hams who have the dedication and courage to do that.
"And, of course we also encourage them to take some note for their own personal safety in those circumstances where that's a real issue."

You can download my entire interview with Kay Craigie from our website at www.arnewsline.org. Just scroll down to the words "Kay Craigie interview" and right click on the word "here" to save the file to your computer."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Kay Craigie, N3KN, assumed the reins ARRL from outgoing President Joel Harrison, W5ZN, at the close of the Annual Meeting. In October, Harrison had advised the Board that he would not seek re-election.

(ARNewsline(tm) with biographic information from ARRL)

**

HAM RADIO POLITICS: CHANGES TOP THE ARRL LEADERSHIP

The elevation of Kay Craigie to the presidency has lead to several other changes in the ARRL higherarchy. As a result, Vice President Rick Roderick, K5UR, being elected First Vice President and Midwest Division Director Bruce Frahm, K0BJ, elected to the Vice President position. This has created a vacancy in the Director position in the Midwest Division where following natural order of succession Vice Director Cliff Ahrens, K0CA, will take over as Director.

Another change was the election of Dakota Division Director Jay Bellows, K0QB, as International Vice President. Dakota Division Vice Director Greg Widin, K0GW, will move up to Director in that Division.

Last but by no means least word that ARRL Technical Relations Manager Brennan Price, N4QX, has been elected ARRL Chief Technology Officer. He replaces Paul Rinaldo, W4RI, who retired from the staff in 2008 but

retained the officer title through the end of its two-year term.

**

RESTRUCTURING: FCC ELIMINATES PART 23 OF ITS RULES

The FCC has issued an order that eliminates Part 23 of its Rules. Part 23 governed the International Fixed Public Radiocommunication Services.

According to a Commission January 14th release, this change eliminates an outmoded service and makes the frequencies available for other services. Among the re-purposing of the spectrum involved is to provide for newer disaster recovery communications services.

The Commission's rules defined the now defunct International Fixed Public Radiocommunication Services as a publicly available fixed service between the United States and foreign points that was created in the 1930's. For many years facilities on those frequencies provided an important form of international communications. More recently it was used for point-to-point microwave services.

You can read more at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-7A1.doc (CGC, FCC)

**

RESTRUCTURING: BROADCAST TV VS. WIRELESS BROADBAND CONTINUED

The FCC appears to be backing off on reallocating broadcast spectrum for broadband, or so it seems according to a report from John Eggerton of Broadcasting & Cable Magazine. In his article Eggerton quotes Phil Bellaria of the FCC's broadband planning committee as saying the current plan being prepared for Congress does not include enforced reallocation of broadcast spectrum but includes a clause of what he terms as a voluntary opportunity.

By way of background, the FCC began suggesting such a spectrum reallocation late last year. This only weeks after the conclusion of the digital television transition. That's when the Commission's Blair Levin first mentioned the idea of taking broadcast spectrum for the national broadband plan and likely place it in the hands of wireless telephone service providers. A wireless industry spokesman had said that wireless broadband will need at least 800 MHz of additional spectrum in the next six years.

Broadcast TV occupies 300 MHz and according to Wireless Week, the wireless industry maintains that the record overwhelmingly demonstrates there's a need for additional spectrum for mobile broadband services. This includes the almost 300 MHz allocated for broadcast television use which the wireless industry appears to see as being spectrum most favorable to mobile broadband. (B&C)

**

ENFORCEMENT: FCC ISSUES CITITAION FOR UNAUTHORIZED WIRELESES VIDEO CAMERA

The FCC has issued an official Citation to Pinecomputer of Covina, California. This, for marketing unauthorized radio frequency devices in the United States.

According to the FCC, an investigation by the Enforcement Bureau's Los Angeles Office revealed that on November 10, 2009, Pinecomputer marketed model W203CA, 1.2 GHz wireless surveillance cameras and associated receivers which have not been approved for sale by the regulatory agency. The agency maintains that Section 302(b) of the Communications Act provides that no person shall manufacture, import, sell, offer for sale, devices which fail to comply with the FCC regulations in this area.

Violations of the Act or the Commission's Rules may subject the violator to substantial monetary forfeitures, seizure of equipment and criminal sanctions, including imprisonment. The FCC gave Pinecomputer fourteen days to request an in person meeting with the agency to discuss the allegations. (FCC)

THE CHANGING OF THE GUARD: DAVE INGRAM, K4TWJ - S.K.

It is with great sadness that we report that our longtime friend and CQ Magazine columnist, Dave Ingram, K4TWJ, became a Silent Key the morning of January 20th. This as the result of complications from a massive heart attack he suffered on New Year's Eve.

Dave Ingram, K4TWJ, had been writing for CQ at least since 1981 and has been a CQ columnist since 1982, starting with an amateur television column called World of Video. That column eventually broadened its outlook and became Dave's signature monthly column in CQ known as the "World of Ideas." Regular topics included Morse code keys, stealth antennas, building "new vintage" tube gear and mobiling.

In addition, for the past decade, Dave has been CQ's QRP Editor and "How it Works" columnist. His enthusiasm for whatever caught his interest was contagious and spread widely through his informal yet educational style of writing.

But more than anything else, Dave was simply a nice guy. He was a ham who loved the hobby and blessed with the God-given ability to share that enthusiasm with anyone with whom he came in contact.

As this newscast is prepared funeral arrangements are not complete. Additional information will be posted on the CQ website news page when it becomes available. Condolence cards may be sent to Dave's wife, Sandy, WB4OEE, at their Callbook address. Contributions in Dave Ingram's memory be made to the American Heart Association

73 old friend. You will truly be missed.

(From information provided by CQ Magazine)

RADIO HONORS: DAYTON HAMVENTION SEEKING AWARD NOMINEES

The Dayton Hamventionï¿½ is once again soliciting nominations for its highly coveted Radio Amateur of the Year, Special Achievement and Technical Excellence awards. To many radio amateurs these are considered the ham radio equivalents of the entertainment industries Tony, Emmy and Oscars.

The Radio Amateur of the Year is someone who has devoted the better part of his or her life to improving the overall state of Amateur Radio. The Special Achievement Award is presented to a radio amateur whose one time accomplishment has had a significant and positive impact on the hobby. The Technical Excellence Award is given to an individual whose expertise in the scientific aspect of the hobby has lead to advancement in the overall state of the art. And this year, there will also be a onetime only a Club of the Year award. This to coincides with the 2010 Hamvention theme which is "Amateur Radio Clubs Worldwide: the Lifeline."

Applications for these awards can be found www.hamvention.org/awards.php. Submissions by e-mail go to awards@hamvention.org or via regular mail to Hamventionï¿½ 2010, Attention Awards Committee, Post Office Box 964, Dayton, Ohio, 45401. And less we forget, the cutoff date for submitting all nominations is March

15th. (Hamventionï¿½)

**

THE SOCIAL SCENE: SPEAKERS NEEDED FOR HAMVENTION TOWN MEETING

If you have ever dreamed of being a speaker at the famed Dayton Hamventionï¿½, 2010 may your chance to make that dream come true. Each year Amateur Radio Newslineï¿½ produces and hosts the Ham Radio Town Meeting at the Hamventionï¿½. And with the world financial recession continuing and so many people still out of work, we got the idea to dedicate this years session to advising how having a ham radio license might be a way to open doors to employment. If you are one of those people who landed a job because of your experience as a radio amateur, we would love to have you tell your story at this years Ham Radio Town Meeting.

OK, there are a few caveats. First off, you are on your own as far as travel and accommodations. The Hamventionï¿½ no longer pays the expenses for
speakers. Also, you will only get 10 minutes to tell your story after which you will be expected to answer questions from the audience at the Hara Arena and possibly those on-line in their homes.

If you are interested in being a presenter please e-mail us an outline of your proposed presentation to newsline (at) arnewsline (dot) org. Please be sure to include your postal address, e-mail address, phone number and other contact information. We will look over all submissions and get back to you if what you have to say fits with the goal of this year's Hamventionï¿½ Ham Radio Town Meeting.

This year's Ham Radio Town Meeting takes place on Saturday, May 15th at the
Dayton Hamventionï¿½. We look forward to hearing from you. (ARNewsline(tm))

HAM RADIO IN SPACE: A SOUNDS OF SPACE WEBSITE

Turning to ham radio space related news, word that DD1US now has an extensive collection of sounds from manned and unmanned space exploration including amateur radio operations on his website. This includes historic recordings like Sputnik 1 and Apollo 11. There is even a page devoted to clips of Amateur Radio satellites from Oscar 1 to Oscar 68. Its all on-line at www.dd1us.de. (Southgate)

**

HAM RADIO IN SPACE: FO-29 TO RETURN TO THE AIR

Fuji Oscar 29 ground controllers at the Japan Amateur Radio League plan to open the satellite for amateur radio use but it may not remain operational after eclipses due to power limitation issues. Depending on the power budget the JARL may need to selectively cancel satellite on time. All hams are reminded to please use as low power as necessary on the uplink to

complete their communications. (JE9PEL)

**

RADIOSPORTS: WSJT GROUP SPRING ON JANUARY 30

The first 2010 WSJT Group Sprint will be held on January 30th which is the last Saturday morning of the month. The rules will stay the same as for the last Sprint in April of 2009 and are posted at contest website at. http://www.ykc.com/wa5ufh/Sprint/W5WVO_Sprints.htm

For those who have never heard of a Sprint, these are short duration contests usually aimed at promoting activity on a given band or using a specific mode. In this case its to encourage the use of the WSJT low noise digital communications mode developed by Joe Taylor, K1JT. Subsequent Sprints for 2010 will be on February 27th, March 27th, and April 24th. (W5WVO)

**

RADIOSPORTS: DX MAGAZINE PUBLISHES 2009 MOST WANTED RESULTS.

The DX Magazine's "2009 Most Wanted Survey" has been posted on the publications Web site and printed in the January / February issue. The top five most sought after entities appear to be number five Yemen; number four Bvouvet Island; number 3 Marion Island, number two Navassa Island. The number one most wanted country is North Korea.

The survey was conducted between September and October of 2009. The listing shows the top 100 World-Wide most wanted and also includes their 1998 comparison ranking for 2008. Its on line at dxpub.com/dx_news.html/ (DX Magazine)

**

DX

In other DX, EA5BYP and EA5KM will be active from Annobon Island sometime in April. Dates and callsigns will be announced soon. Their will be on 160 through 10 meters using CW, SSB and RTTY, with an emphasis on the lower bands and Morse. More on this one as information is released.

JA8BMK will be active from Juan Fernandez Island as CE0ZA through February 2nd. His operation will
be on 160 through 10 meters using CW, SSB and the Digital modes. QSL direct only to JA8BMK.

W7EJ, will be active from Morocco as CN2R during the CQ 160 Meter CW Contest on January 29th through the 31st. This as a Single-Op/High-Power entry. QSL via W7EJ. And MJ0ASP will also be active from Morocco. Look for him as CN2MR between February 18th to the 26th. His activity will be on the HF bands using mostly CW. QSL via his home callsign

Above from various DX news sources

THAT FINAL ITEM: LORAN-C NAVIGATION SYSYEM GOING QRT

And finally this week, its time to say goodbye to the old LORAN-C radio navigation system is soon going QRT. Frank Haas, KB4T, is here with the story of a longtime friend to sailors world-wide:

--

LORAN is an acronym for the words long-range navigation. It's a radio navigation system that was developed during World War II for military ships and aircraft. It then was then perfected for civilian use and entered full time service in 1957.

LORAN-C operates in the low frequency portion of the electromagnetic spectrum from 90 to 110 kHz.. It has transmitted the past 52 years from 24 stations operated by the Coast Guard to determine positions at sea or in the air.

For decades, LORAN-C was the standard navigation system for ships, fishing boats, and other vessels. It also served as a supplemental navigation aid on many small to medium sized aircraft. And at its peak popularity, an estimated one and a half million LORAN-C receivers were in use.

But in the mid-1990's mariners and pilots began turning to global positioning systems for its almost pinpoint accuracy. Gradually, use of LORAN-C fell away. Now the Department of Homeland Security says that LORAN-C has become obsolete and is no longer needed for navigation or safety.

Most of the nation's LORAN-C transmission stations will be turned off on February 8th with the remainder being powered down by October 1st. This termination of service does not affect U.S. participation in the Russian American or Canadian LORAN-C chains. U.S. participation in these operations will continue at least temporarily in accordance with international agreements.

From Holly Hill Florida, I'm Frank Haas, KB4T, reporting for the Amateur Radio Newsline.

--

Some had thought that the government might keep LORAN-C as a terrestrial back-up system for the satellite based Global Positioning System but the Department of Homeland Security seems to believe that doing so is not a necessity. (Science OnLine, Boston Globe and various other published reports)

I suggest the ARRL web site. Specifically to address this question, see http://www.arrl.org/FandES/field/regulations/bands.html where you can access various sizes of a graphic that will show you which bands are available and what kind of operating (phone, code, etc.) is allowed on each. Unfortunately, this is perhaps the trees when what you are looking for is the forest. If you poke around on the site, you'll find more general information that will give you background on the hobby and explain what the various frequency bands are good for.

> Based on admittedly cursory review thusfar, it appears
> voice comms have limited availability for a tech ticket. IF that is the
> case, my primary interest is in emergency voice comms during regional
> events...will I need to upgrade to a general license for effective use?

The short answer to this question is, no.

The Technician class license has full privileges, including voice, on frequencies that are dubbed VHF and UHF. At these frequencies, communication is "limited" to line-of-sight. However, hams have built repeaters, which generally are on some high place and are line-of-sight to a large area. The bottom line is that the Tech privileges allow you to communicate over most large urban areas.

This is the mode of ham radio that is used for the vast majority of communication during disaster events and public service events. When you see a ham talking into a handi-talkie, he's using one of the frequency bands that the Technician license includes. For short- to medium-range tactical communications, this is the equipment of choice and most of the participants hold the Technician class license.

The lower frequency allocations, which are not available to the Technician license, are useful for longer-range communications. At these frequencies, the radio waves bounce back from the upper layers of the atmosphere, making it possible to communicate around the world. It's quite rewarding to contact someone on the other side of the earth,

using just your own equipment. As you can see, there are many aspects of the hobby, and once you get into it you may decide that you want to move into areas other than regional events. Or not . . . it's your choice.

> our inability to follow the rules.

I believe that the stealth concept has some problems. The main one is that it sort of creates civil criminals, at least in our case. But for my money, if the homeowners association says no antennas, then it's no antennas.

I live in a thoroughly modern neighborhood, and we don't have antenna restrictions, except for a radius-drop tower restriction - not that a tower is likely to fall that way. NIce well kept houses, and the Ham radio folks all get along with their more normal neighbors. My neighbors actually like to watch my antics.

But here is the clue to the whole thing. Either don't live in a neighborhood with antenna restrictions, or if you have deep pockets and want to be a nuisance, get a lawyer and sue. I know that some are going to say "You can't find a development like that. Park Forest, just north oh State College PA begs to differ. No HOA either. Most respectfully, anyone who lives in a development with an HOA just has to know that restrictions are part of the package, even if some seem arbitrary and even capricious. The restrictions allow the tenants to feel superior. We have one in our area that does not allow any outside decorations or drying clothes outdoors. I think you have to agree to keep your garage door shut at all time (except for ingress and egress) Point is, don't live there.

Side note. I was doing a public service bike-hike ride support. part of it went on a township road through one of those neighborhoods. Suddenly a van pulls up and a guy hops out. "What are you doing here?" he says. The YL who was manning the station was a little concerned - it looked almost like an abduction. Anyhow, we explained the bike ride we were helping with. He wanted to know why, as the President of the local Homeowners association, he wasn't informed or asked permission to do this. Then he said he was doing to call the police. At that point, I took out my cell phone, and said Fine, I'll even help, Ken

(yes I knew him). I'm going to call the Police, the Charity we're doing this for, the newspaper and the local radio stations. Still want to do this thing? He thought better of it, got back in the van, and left.

Point is, if you live in such a neighborhood, that is what you get. Don't live in such places if you want to enjoy Ham radio, there are people who want to control your personal life

I agree with your bottom line, Mike. But we've beat this topic to death in this newsgroup, and I can pretty much predict where the discussion will go.

My comment on this general issue is that the non-ham population develops their impression of hams based on what they see and hear. When they see hams helping out in the community by assisting with a public event or teaching radio to the local Boy Scouts, the impression is a positive one. When they see the guy with a bunch of unsightly antennas whose house is a blight on the neighborhood, or the one who flaunts the CCR that they signed, the impression is negative.

Our hobby seems to be cursed with a higher percentage of people who are oblivious to the concerns of their neighbors or the rest of the general population. These are the folks who tend to be visible and influence the impression of ham radio for the general public. Or maybe I'm just suffering from the same effect; it's not the ham who is cooperating with the Boy Scouts that I see, but the one with six towers erected on his city lot.

We need to be more proactive at getting the positive side of ham radio out into the public eye.

Some hams have added other radio equipment to link together several
repeaters to cover large areas. One linked system in the western USA
is the Intermountain Intertie http://utahvhfs.org/snowlink.html which
covers much of central and southern Idaho, southwestern Wyoming,
northern Utah, western and southwestern Utah, northwestern Arizona,
and northeastern and southeastern Nevada.

The ultimate repeaters, range-wise, are the satellites which hams have
placed in orbit. See http://www.amsat.org/ It is possible to
communicate using these satellites with a hand-held 5-watt radio and a
hand-held directional antenna.

Amateur radio equipment is standard on the International Space Station
(ISS). Most of the astronauts are licensed hams, and in their spare
time they will get on the radio to have fun.

The satellites and the ISS all use VHF and UHF frequencies which a
Technician license covers.

The ultimate long-distance path is bouncing your signals off the moon
and back to earth. See
http://en.wikipedia.org/wiki/EME_%28communications%29
The Technician license covers this.

If your desire is to communicate locally for Emergency Services, you would normally operate on VHF and/or UHF frequencies, which are all open to the Technician license. If you want to communicate further, where VHF/UHF simplex or repeaters won't go, then you would need to upgrade to General to be able to operate voice within the HF bands. For example, if you wanted to participate in the emergency nets for the Haiti earthquake, you must have at least a General class license.

Take a look at the chart at

http://www.arrl.org/FandES/field/regulations/Hambands_color.pdf

which will show you what modes the classes of licensees can use on the
various bands.

I think you'll find that a Technician class license will give you full
permission on all bands 50MHz and up, which is where is where you'll
find almost all local event communications taking place.

I see this whole thing rather differently.

I agree that any ham who wants to have a station at home should buy a house without antenna restrictions. Same as someone who wants to have, say, a vegetable garden should buy a house without vegetable-garden restrictions. Etc.

But I think there's a growing mindset that, for a neighborhood to be "nice", almost everything that someone might find unattractive must be prohibited. And since there's almost nothing that *somebody* won't find unattractive, almost *everything* is prohibited, or strictlyregulated.

I can see the point that a ninety-foot tower on a quarter-acre lot is out of scale. Or when a homeowner lets a place fall to ruin, something needs to be done.

But when a ham can't have a wire dipole in the back yard of a half-acre wooded lot, something's wrong. When the satellite TV folks have to go all the way to the Supreme Court to get preemption to have dishes the size of a large pizza, something's wrong. When American citizens, some of them decorated military veterans, are sued and threatened with eviction for flying the American flag in their own front yards, something's wrong.

Real estate isn't like other things in that it's not portable and the supply is limited. For most people, their home is their biggest investment, and moving is a major event. Many hams simply cannot afford to move just so they can have an antenna. I suspect that antenna restrictions are a major cause of low growth in Amateur Radio in the USA, because why get a license if you can't have a decentstation?

It seems to me that if the rules allow a flagpole, birdhouse, plant trellis, etc., but not antennas, then what's wrong if one of those things has a dual function?

Actually what you ran into was some officious idiot with no authority attempting to assert authority over you. Let me note that theoretically streets belong to the governmental entity in which said street is located or some entity which the governmental entity is part of (i.e you can have a state or county road in a small township, it might not belong to the township, but it sure does belong to some governmental entity) and as such, private individuals have no right or privilege of passing on who or what moves on a public street.

The statement advising hams not to move into a development with either home associations or CCRs strikes me as poor advice. There are few locales without one or the other left in the US, and most used boiler plate to bar antennas.

I personally would love to see CCRs and home owner associations expire after some extended period of time like ten years, we thus would not end up with the banning of clothes drying or antennas.

OK, Great! And thanks to all who responded.

As I am located about 2/3rds the way up the side of Punchbowl Crater,
my "line of sight" should easily cover most of my operating area in the
Honolulu area, including several mil bases, multiple airports and
seaports, as well as State and County HQ's. If repeaters remain
operational, the rest of the island should be accessible as well, to
some extent. Aside from that, I've had a scanner for over 40 years at
this point, and pick up a lot, but two-way comms would become critical
in a Hurricane or Earthquake scenario.

Now to order the manual and start studying...

I'm inclined to disagree with you, but I don't have any more factual or
statistical information than you do to make or refute such a statement.
I wonder if such information exists; is there some compilation of data
that says that xx% of home sales included some kind of restriction?

It also depends on where you are geographically. Here in rural
Minnesota such restrictions do not exist. But not everyone yearns to
live in rural Minnesota . . . especially at this time of the year <grin>

I just noodled around the ARRL website and couldn't find any statistics.
Here in the Bay Area, anecdotal evidence is very strong that nothing
besides federally protected pizza dishes are allowed.

And that's my point.

A friend of mine, while living in an apartment, unrolled aluminum foil in a double folded dipole and thumbtacked it to his ceiling.

And while living in Culver City, after they introduced a limit to the number of external antennas (rather broadly worded) We just moved some of the fixed point to point antennas inside the attic.

Interestingly enough, in the original article in QST, when asked "What are the wires going to the birdhouse for?" He answered. "It's for a weather station."

Hrmmm, obviously knew the "I have an antenna in violatioin of the rules" was the wrong answer.

The key word there is *public*. In some developments the streets are part of the development, a osrt of common driveway. Some local governments like this because it relieves them of the responsibility of snow removal, repair, etc.

I disagree 100%!

In many parts of the USA, there are plenty of homes that allow antennas. From my limited experience, they are usually older (pre-1970s) homes in established neighborhoods.

I think what happens in many cases is that people limit themselves to new construction, townhomes, or similar planned communities where rules and limitations are all part of the boilerplate. In some parts of the country, where growth has happened mostly in the past 20-30 years, much of the housing stock is like that. Particularly the less- expensive homes, oddly enough.

When I moved to my current house 10 years ago, one of the first things I did was to explain to the Realtor what was Not Acceptable. One of those things was a place with no-antennas restrictions. Another requirement was that I and my RE lawyer be able to see any deed restrictions, covenants, etc. before making an offer.

> I personally would love to see CCRs and home owner

ith
> the banning of clothes drying or antennas. &#65533;

The problem is that most of them are specifically set up to be self-
perpetuating, and to make changing the rules all but impossible.

And even if every amateur now licensed decided to never buy another
restricted home, we'd still have the problem of hams who currently live
in them, and of people who live in them and who want to be hams.

I think the bigger issue is this: Why is there such interest in
restricting what other people can do?

Good question! But what we need is even more specific, such as how many homes in a specific price range, etc.

I yearn to live in rural Minnesota. Or New York State, Maine, and many other places - any time of year.

But for most of us, there has to be a suitable job. Or jobs, in manycases.

But *is* it a violation? If the HOA people considered it a birdhouse,
and if tall birdhouses are allowed, then maybe he didn't violate the
CCRs. Or at least only in spirit, but not according to the letter of
the CCRs.

I'd wager that the CCRs didn't specifically say, "No outside
antennas with the exception of those that look like bird
houses."

My point is, what part of no outside antennas permitted don't
people understand?

I used to do a lot of closings, most developments and housing tracts built after 1973 had either the original builder or the successor home owners' association include that as a deed restriction.

The restriction is also provided in models for lawyers to draft such restrictions so they will stand up in court. I only only of a few locales in Illinois (a ham lawyer drafted models) where it's not boilerplate.

I'll put it this way, if you want a boring day, go to your local county recorder's office and try to find a division that doesn't include them one way or another. Older locales and most big cities don't have said restrictions, of course, lots are smaller and there are likely to be offsetting problems like for example fear of children climbing your tower.

This is a tricky proposition. If the private way is open to the public only reasonable restrictions are allowed. Thus restricting hours large trucks may make deliveries might be reasonable but the private way also has to give notice that it's private unless it's patently obvious. Thus, you can't parade in someone's driveway without permission and meeting all legal requirements for a parade. I further note that HOAs usually don't want to own roads and streets precisely because then they have to be paid for by the HOA's membership rather than tax dollars.

My point is, what part of no outside antennas permitted don't
people understand?

I live in a CC&R'ed community, but the CC&Rs were written with an escape clause which I executed back in 1990. However, none of my neighbors have ever challenged my property's status despite my 15 antennas (of which 3 are covered by FCC rulings and state law for TV and satellite reception). However, I did work out placement with them - but it didn't affect any of their "city views."

To Jeff: What part of "unenforced CC&Rs" don't people understand? Failing to complain eventually estops an action when too much time has passed.

It would be useful to read the specific rules. The article doesn't say the rules prohibit antennas, it just says they *concern* antennas. It is very possible that the rules don't prohibit antennas outright, just restrict their appearance. Obviously W0ES's arrangement complies with the aesthetic requirements of the rules!

==========

While one has to live with the rules one agrees with... one also has to suspect the widespread deployment of such rules is destructive to our hobby. An existing ham may or may not have the option of selecting a home without CC&Rs when looking for a place to live. A young person considering taking up ham radio is not going to be having much luck getting his parents to move so he can have some antennas -- he's probably going to give up on ham radio & take up Linux instead.

It's not difficult to see other hobbies suffering from this aesthetic intolerance as well. Amateur auto mechanics, for one. People who are *not* hams are beginning to get fed up with this as well.

AFAIK that depends on the locality. I know locally if one CC&R is not
enforced the courts -tend- to want to ignore all of them.

A point to consider, if there are CC&R (say like banning antenna''s),
but there is no HOA. In most localities the CC&R has to be enforced by
private court action of another home owner. Since their court costs have
to come out of their personal pocket, it does really reduce the odds of
the CC&R being enforced

After having been the architectural control committee where I live, and researching CC&R's extensively I hate to tell you that these things are almost everywhere now. The pea brained real estate sales people somehow think they're good and preserve property value. But after some point in the early 80's almost any land subdivision included restrictions, and pretty universally included language regarding antennas. Before that the language may have been directed toward "structures" not antennas. It also seems to be more prevalent regionally. That could have something to do with when a particular area experienced rapid growth. (like here near Austin, TX)

So the amateur is faced with no operation or bending the rules. Jeff may be in a nice situation there, but I see it as less than black and white issue. I also balance it in a way that causes no issues. I have a HF6V in the backyard, and a 440 vertical back there too. The 440 antenna is somewhat visible from teh street, the HF6 isn't, obstructed by a tree. The neighbor can see it, but they know that the moment they say anything is when I go after them for their barking yip-dogs, which I see as a worse issue than antennas.

There's nothing to suggest he violated any conditions.

Such rules are generally for esthetic reasons, and he probably
followed them to the letter.

Of course not. But they may do just the opposite: they may talk
about antennas that look like antennas. Or more likely, they're
just very vague.

From the perspective of a property owner, restrictions generally do preserve property values. From your perspective as a ham, they are horrible things that prevent you from exercising your rights and enjoying your hobby. Both contingents can mount persuasive arguments to support their opinion.

Hams must be careful to realize that earning an amateur radio license and the ability to operate a radio station is a privilege, not a right. There are plenty of other examples in life that are analogous, such has having a driver license. There is, however, that famous clause in the Constitution regarding "the pursuit of happiness." But moving right along....

I was fortunate to be able to erect some kind of antenna in the two CCR developments I lived in in southern AZ over the course of 23 years, even though the "anti-antenna" statement was in the CCR books. No one ever said 'boo' about my antennas. But, then, my neighbors liked me. And, I never asked permission. And I always used my electric clothes dryer.

IMO, a couple things. One big thing was that antennas kind of got in there as collateral damage. This is pure conjecture, but the biggest beneficiary of antenna restrictions was the cable TV industry. Even though they had a superior product, if you couldn't put up a TV antenna, it seals the deal. No exceptions were made until the sat TV people made a very similar product with an antenna that is pretty unobtrusive.

Second thing is perhaps one of the less pretty parts of human nature. A lot of people believe that they know what's best, and they have no problem imposing what they know on other people. If a contract in development A has one page of activity restrictions and development B has three, then by their logic, Development B simply has to be "better". That's my guess anyhow.

It's a very good point, Ralph. A person who lives in a place with an
HOA at some level wants to live there and is accepting of that fact.
One of the other less pretty aspects of human nature is that there are
people who either want to mess with the HOA, or want it, but want
special privileges. I would personally find it a little odd that a
person who is accepting of such intense outside control would under
normal circumstances both live in such a place, and simultaneously
want to put up a AR antenna.

You betchya! We have neighborhoods in my area that dictate almost every facet of your domicile, from yard appearance to house color and style.

And believe it or not, there is a fairly early development around here that has as one of it's restrictions,a racial clause. As you might guess, that one isn't enforced, but it is abhorrent and while early mortgage holders still have their signed documents to that effect - it isn't enforced.

> So the amateur is faced with no operation or bending the rules. Jeff may
be
> in a nice situation there, but I see it as less than black and white issu

And yet I can find dozens of available, nice houses in our area that allow me to put up what I want.

Implied in all of the CCR issues is the unstated part that the prospective station operator wants to live in the nice subdivision, with other people of like mind and status, but want's that one little change that will allow him to do what he wants to do. He doesn't want to live somewhere else.

I chose a different path. I live where I'm allowed to put up antennas. I'm violating no laws or covenants. If other people's situation differs, its more likely to be a matter of that they care more about whatever attracted them to their neighborhood than they care about amateur radio.

I saw the convenants and restrictions before signing the papers (a law
here in California), but had no choice given my geographical and
financial needs.

I'm not going to argue from a constitutional perspective. A contract is
acontract.

Nevertheless there are creative ways to erect an antenna and get on the
air unobtrusively. One option is a portable antenna you can put up at
night and take down during daylight hours. I leave it to you to decide
how to implement this.

Another option is an indoor antenna. When I put up my indoor 20 m
dipole in 2008, it performed pretty poorly. Now that conditions have
improved, I'm actually able to work some DX, and can work most of the
stations I hear. As the cycle 24 progresses, I'm sure the indoor system
will be more thanadequate.

Another option is using a *dummy* satellite feedline as an endfed 1/2
wavee or random wire antenna.

Or load up your rain gutters.

I don't know of any study showing that antennas lower property values. For that matter I don't know of any showing that outdoor clotheslines lower values either. It's a claim that appeals to those opposed to antennas, but it doesn't seem to have backing in the real world.

Guess it's time to mention the "awntenna" again. :-)

http://www.wintertime.com/OH/73.jpg

The folks at "73" got diagrams 1a and 1b reversed, so take
that into account.

Here's a closeup of the indoor verted-vee ("rabbit ears")
backup antenna mentioned in the article:

http://www.wintertime.com/OH/sebastian.jpg

That article was written 24 years ago (yikes!), so I'm sorry
to say that Sebastian is no longer with us. I have a cat now,
but her ears are way too short for HF.

I ended up working around, I think, 130 countries before I
decommissioned the antenna.

Patty

Maybe.

Or maybe they don't have much choice.

Real estate is different from other things in that it's not portable.
Plus you can only buy what people want to sell.

What I mean is that if your job is at X and your spouse's job is at Y
and the decent schools are at Z, there's a practical limit on where you
can live and not spend your entire life commuting. On top of that, most
people have definite money and time limitations.

The result is that, in at least some cases, there aren't so many
options to buy a non-restricted place. Particularly when there's atime
limit.

> One of the other less pretty aspects of human nature is that
> there are
> people who either want to mess with the HOA, or want it, but want
> special privileges. I would personally find it a little odd that a
> person who is accepting of such intense outside control
> would under
> normal circumstances both live in such a place,
> and simultaneously
> want to put up a AR antenna.

There's also the case of the person who was not informed of the rules
and limitations.

Some years back I considered moving, and looked at a number of homes in
my area. All of them had nice fact sheets and disclosure sheets to look
at and take away. None of them - absolutely none - mentioned an HOA,
CC&Rs, etc. Most of them had some CC&Rs, but the unsuspecting homebuyer
wouldn't know that until closing - if then. When your old house is sold
and your stuff is on the truck and you're at the closing, it's just too
late.

Some might say "do your research first!" and that's good advice. But
back when I was looking, the RE market was so hot around here that a
house would go on sale at noon and have three no-contingency offers,
often at or above the asking price, before the sun went down.

> I'm not going to argue from a constitutional perspective. A
> contract is a contract.

But people renegotiate contracts all the time. Athletes are one example. Divorce is another - people make a contract "until death do us part" with no escape clause, but then they split up and negotiate who gets what.

Somebody mentioned racial CC&Rs - those were contracts when written, but they are unenforceable now. I suspect that CC&Rs restricting people of certain ethnicities, religions, occupations or political views would be unenforceable too.

There's a case I read of where grandparents living in an "over 55" community are being told they have to either move out or send their grandchild away, because the grandchild is too young. They are the legal guardians because their child is unable to care for the grandchild and the other parent is gone. Isn't that age discrimination?

There's also the "contract of adhesion" idea, a legal term for one side holding all the cards.

btw, there's an organization specifically about clothesline prohibitions.

IARU E-LETTER

January, 2010

In this issue: A Message From IARU President Tim Ellam
Haiti Earthquake Report

A Message From Tim Ellam VE6SH/G4HUA,

Secretary Stafford requested that I provide an update on IARU activities for the IARU E-Letter. I am pleased to do so.

Some recent activities:

o IARU Secretary Rod Stafford, W6ROD and IARU Coordinator for Emergency Communications, Hans Zimmermann, F5VKP/HB9AQS have attended meetings of the ITU Development Sector and are preparing for the World Telecommunications Development Conference to be held in Hyderābād, India in May.

o IARU Vice President Ole Garpestad,LA2RR and I presented our credentials to ITU Secretary-General Hamadoun Tour&#65533;, HB9EHT. We were fortunate to have a lengthy discussion with Dr. Tour&#65533; where we outlined the goals for IARU within ITU. Dr. Tour&#65533; expressed his appreciation of the activities of the IARU and the Amateur Service in general.

o Prepare for the upcoming ITU Plenipotentiary Conference to be held in Veracruz, Mexico in October. Items on the agenda for this important meeting include the election of ITU officials and the consideration of changes to the ITU Convention and Constitution that may impact the role of observers such as the IARU. Region 2 Secretary Ramon Santoyo V, XE1KK is working with the Mexican society, FMRE, to arrange an amateur station for this event.

o Vice President Garpestad and I attended meetings of ITU-Working Party 5A. In particular, we took part in Working Group 1 headed, for the first time, by new Chairman Ken Pulfer VE3PU. This gave us a chance to meet in person with a number of the members of the WRC-12 team. Both Ole and I were very pleased with the efforts that are being made in Working Group 1 and Working Party 5.

o At our recent meeting in Christchurch, the AC established a common position with respect to the WRC-12 agenda items that are of interest to the Amateur Services

o Amateur Radio Administrative Courses (ARACs) are in the process of being planned in both Laos and Oman for later this year.

o Developed a plan to have the IARU better represented before some Regional Telecommunication Organizations.

o Put in place a proposal to have more than one AC meeting a year with the additional meeting to be held on a "virtual" basis either through radio conferencing or teleconferencing.

o Communication amongst the AC members and the team preparing for WRC-12 has been assisted by the establishment of two email reflectors. This, I think, went a long way in enhancing our discussions during the AC meeting which was held in Christchurch, New Zealand last October

I am very pleased with the cooperative approach of the AC members and our WRC-12 team and I think it bodes well for our future activities.

When I was first elected to this position, I provided the AC members with my view of our goals for 2009-2014. It is my hope that we should strive to make the IARU the global voice of the Amateur Radio Services and the world's leading organization of Amateur Radio Member Societies. I believe we are well along in that process.

One of our other goals is to provide more effective communication to Regions and Member Societies. Hopefully we are improving in that respect through some of the mechanisms we now have in place, such as this E-Letter. We also wanted interact with our Member Societies more frequently than we have in the past. Ole, Rod and I have been able to do that in the past few months by our attendance at various Hamfests or in meeting with Societies directly. We both plan to have similar meetings throughout 2010.

Finally, I would like thank each of you for your continued support of the IARU and its activities. Our work together will continue to enhance the position of the Amateur Radio Services.

Please feel free to contact me or any member of the officer team if you have any questions or issues that you would like to raise. I can be reached by email at ve6sh@iaru.org.

==> Haiti Earthquake

(Note: The following account of the activities related to the response to the earthquake in Haiti that took place on January 12, 2010 is taken from the ARRL web site and provides information that is available as of January 14, 2010.)

On Tuesday, January 12 at 4:53 PM Haiti time (2153 UTC), a magnitude 7.0 earthquake hit 10 miles (15 kilometers) west of Port-au-Prince, the island nation's capital. Communications in and out of Haiti have been disrupted. The ARRL encourages US amateurs to be aware of the emergency operations on the following frequencies: 7.045 and 3.720 MHz (IARU Region 2 nets), 14.265, 7.265 and 3.977 MHz (SATERN nets), and 14.300 MHz (Intercontinental Assistance and Traffic Net); the International Radio Emergency Support Coalition (IRESC) is also active on EchoLink node 278173.

There was no firm estimate on how many people were killed by Tuesday's quake. Haitian President Rene Preval said the toll could be in the thousands: "Let's say that it's too early to give a number."

Tuesday's quake was felt in the Dominican Republic, which shares the island of Hispaniola with Haiti, and in Eastern Cuba, but no major damage was reported in either place. The January 13 edition of The Daily DX reported that the Rev John Henault, HH6JH, made contact late Wednesday morning with the Intercontinental Assistance and Traffic Net (IATN) on 14.300 MHz; this is the IARU Global Center of Activity frequency for emergency communications. He said that he was safe, but had no power and no phone service. He was operating on battery power and hoping to get a generator running later in the day. The edition also noted that Pierre Petry, HH2/HB9AMO -- who was in Cap Haitien (about 140 km north of Port-au-Prince) is safe; Petry is in Haiti working for the United Nations World Food Program.

On Wednesday afternoon, Fred Moore, W3ZU, assisted Jean-Robert Gaillard, HH2JR, with a phone patch to his friend Ariel in Miami. "It's bad, it literally is bad," Gaillard told Ariel. "We don't know how many people are dead. We do not know what to expect. It's chaos, I'm telling you -- it's real chaos. We are really in a disaster area. It's really a war zone. Many, many buildings in the downtown area are stripped from the ground with many people buried underneath them - you name it, it's bad." Gaillard, who lives in Port-au-Prince, was using his neighbor's generator to make the contact. "It's really chaotic. I've never been in a war, but this is what a war zone would be like. Dead bodies all over the place, dead bodies buried. All I can tell you is that I'm okay, my house is okay. We've had 30 aftershocks, the main one yesterday. We are expecting some more shocks, so I'm a bit nervous to be inside the house."

According to IARU Region 3 Disaster Communications Chairman Jim Linton, VK3PC, members of the Radio Club Dominicano (RCD) -- the Dominican Republic's IARU Member-Society -- and Union Dominicana de Radio Aficionados (UDRA) are preparing to go to Port au Prince on the morning of Friday, January 15, where they will install HI8RCD/HH, an emergency radio communications station and a mobile station.

FEMA (U.S. Federal Emergency Management Agency) Administrator Craig Fugate advised that US assets should not self-deploy to affected areas. "Initial reports from Haiti in the wake of yesterday's earthquake are concerning and troubling," he said. "During times like these, the emergency response community always stands ready to assist those in need. The United States Department of State has the lead for foreign disaster assistance, and US assets should deploy only if tasked to do so by the State Department. The most urgent need that the response community can fulfill at this time is supporting ongoing disaster relief fund-raising efforts."

On Thursday, January 14th, planes carrying teams from China and France, Spain and the United States landed at Port-au-Prince's airport with searchers and tons of water, food, medicine and other supplies -- with more promised from around the globe. US Secretary of State Hillary Rodham Clinton said that "tens of thousands, we fear, are dead" and said United States and the world must do everything possible to help Haiti surmount its "cycle of hope and despair." The US Army said a detachment of more than 100 soldiers from the 82nd Airborne Division was heading out from Fort Bragg in North Carolina, looking for locations to set up tents and other essentials in preparation for the arrival of another 800 personnel on Friday. That's in addition to some 2200 Marines to be sent, as the military prepares to help with security, search and rescue missions and the delivery of humanitarian supplies. More than a half-dozen US military ships also are expected to help, with the largest, the aircraft carrier USS Carl Vinson, arriving later Thursday.

Calls to emergency services weren't getting through because systems that connect different phone networks were still not working, said officials from a telecommunications provider in Haiti. The International Telecommunication Union (ITU) is deploying 40 satellite terminals and 60 units with broadband facility to re-establish basic communication links, along with experts to operate them. The ITU will also set up "a reliable, responsive and complete cellular system designed to enable vital wireless communications aimed at strengthening response and recovery mechanisms in a disaster zone," said ITU Emergency Communications Division Chief Cosmas Zavazava. The ITU has allocated a budget of more than $1 million US dollars to strengthen the disaster response effort in Haiti.

ITU Secretary-General Hamadoun Tour&#65533;, HB9EHT, expressed his solidarity with the people of Haiti and offered his condolences to the bereaved victims of the disaster. "The whole world is in shock following the devastation and untold misery caused by the earthquake in Haiti," Dr Tour&#65533; said. "ITU will do everything possible to provide assistance to the people of Haiti by re-establishing telecommunication links which will be vital in the rescue and rehabilitation efforts in the days ahead."

"The scope of the disaster clearly shows that the response to this is going to be a long term effort," said ARRL Media and Public Relations Manager Allen Pitts, W1AGP. "The ARRL has been in contact with communications leaders of the American Red Cross and Salvation Army, as well as other key Amateur Radio operators throughout the region. As teams from the hundreds of responding agencies worldwide are formed for deployment, many will have Amateur Radio components. ARRL is committed to providing communications aid to our served agencies and working with the international community in this time of crisis. At this time there are no known requests from agencies for amateurs to travel to Haiti, but this can change. If it develops that there are ARES&#65533; assignments for a deployment in Haiti, these will be vetted and processed through each Section's Section Emergency Coordinators."

The situation in Haiti is still chaotic. More information will be posted on the ARRL web site (www.arrl.org) as soon as possible. Information is being validated and shared between many amateur groups and news sources as it unfolds.

If you have any information that would be appropriate to publish in this electronic newsletter, please contact me at w6rod@iaru.org.

I just don't know, Jim. Perhaps I have a different idea of choice.

I'd rent before living in a HOA development.

> What I mean is that if your job is at X and your spouse's job is at Y
> and the decent schools are at Z, there's a practical limit on where you

And I suspect that they have a strong sense of "Right now!"

I waited until a combination of market prices, interest rates and
availability showed me the house I wanted.
There are some canards going around about houses. One is that you have
to have a house immediately and anything other than buying a house now
is throwing money away. That perception on many people's part's has
led them to making bad decisions.

I bought my house in 1994. Until that time, I lived in a mobile home.
We looked at houses the entire time, but saved money and waited until
the right house came along. It was a nice house that came on the
market during a mini-slump. It had sat for some months, so the sellers
were "motivated". We got the house at 75 percent of it's appraised
value, at a good interest rate, and it was in that neighborhood that
doesn't restrict antennas. Then we didn't refi except to reduce the
interest rate. It'll be paid off later this year. I live 2 miles from
work, and the kid walked to school until he went to high school.

I point his out because it's apparently quite different than what most
people think is the way to go about doing the house thing. Some may
say I got lucky. Luck had nothing to do with it. I just waited and
pounced when the time was right. Anyone can do that.

Now some people have issues with living in mobile homes, or fear that
any money spent on anything other than a mortgage is wasted. They have

to have a house, and they have to have it now. Okay, then they have to put up with the idea of buy in haste, repent at leisure.

That's putting yourself in a bad situation. Remember, the real estate agent is not your friend. After firing several agents, for reasons like continually showing me houses outside my price range, (that I determined, not them) and not disclosing HOA and other important stuff, I was pretty well convinced of that. They are the sellers friend, and the more they can get out of you, the better they serve their customer. If that means allowing the buyer to think that something is true while it isn't, they are happy to do that.

My point is that there are always options for a Ham, if people think they just have to take whatever comes along, well, they've taken an option that isn't Ham oriented.

The average non-technical person has no idea how microwaves, cell
phones, door openers and car remotes work. I have mentioned to several
people that these things use radio, and they were amazed. At highway
construction projects where they are blasting, the signs say "Turn off
all two-way radios and cell phones." because people don't realize that
cellphones are radios.

My wife and I looked at over 100 houses before we selected the one I live in now. I have *no* HOA, *no* CC&R's, and *no* problem putting up antennas: I had to fire three agents who hadn't heard me when I told them what *my* requirements were.

Michael is right: the agent represents the *SELLER*, not the buyer. He is legally obligated to disclose _some_ things, but professionally obligated not to disclose anything else that might lower the house's value. Agents are not your friends.

I remember one occasion, when I was asked to put a deposit on a home I was considering: the agent looked at the paper, and said, "The deposit isn't five hundred, Bill, it's five thousand", and I replied, "You're right, it's not five hundred: it's Five dollars". He tried to stare me down, and then said "I don't think you're serious about buying this house, and I won't convey that offer", to which I replied "You'll convey the offer or I'll have your license on a plate"!

The agent had a counter-offer for me within two hours. You have to remember that these guys are salesmen, and they get paid to move the product: the moment you let them dictate to you, you lose.

HTH. FWIW. YMMV.

>April 1986 issue of 73 Magazine. So I have to ask, was it a joke?

I'd say it's in the "tongue in cheek" category. The final sentence
says it: "My gratitude... to all of the above for contributing valuable
jargon with which to obfuscate the subject."

The awning idea itself is quite practical... a lot of people have made
very useful contacts by loading up rain gutters, aluminum window
screens, bridges, and so forth. It's described in a not-quite-serious
fashion (e.g. as a close-spaced array of curved radiators).

The idea of using an actual rabbit, as a "verted" rabbit-ear dipole, is
certainly a joke. Actually attempting to transmit via a rabbit would
result in severe QRM ("quispy roasted mammal").

There's an agent for the seller, and there's an agent for the buyer. They should be in a professional adversarial relationship. The seller's agent is out to get the highest price, and the buyer's agent is out to get the lowest. If, as the buyer, you don't think your agent is performing that task, find another agent.

Real estate agents most certainly should be your friend. As a buyer, I cannot possibly know the market and keep up with it as well as someone who does that as their full time job. My real estate agent knows vastly more about what questions to ask and what to look for than I do. While a buyer or buyer's agent may not be required to volunteer information, they are required to truthfully answer questions IF you know what questions to ask.

To try to interject the slightest bit of ham-radio-related content into this submission . . . if being able to erect an antenna is an important consideration for you when buying a house, find an agent who understands CCRs and related issues. If the agent doesn't understand the issues, they cannot do what you need them to do. If the agent cannot or does not perform, failing to ask the right questions or showing you houses that don't meet your needs, get another agent. You would do the same thing if you explained that you needed a minimum of three bedrooms and the agent persisted in showing you houses with two bedrooms.

The jargon is made up; the antenna was real. So was the radiation pattern. (We drove around Sunnyvale taking measurements.) I don't recall why "73" published the article in April. A similar article appeared in an Australian ham magazine, probably not in an April issue.

So far I've read much about the radio amateur who buys a place with
restriction and then tries to circumvent them. I've seen almost no
comments about someone already living in such a place and who then
develops an interest in amateur radio.

I was living in a townhouse development (adjoining units side by side, each with their own flat roof) in southern Arizona when I resurrected my interest. I went up on the roof, installed a 7' length of 1" pvc tubing for the support for an inverted-V, and ran ladder line inside the tubing. The tubing was supported by tv mast clamps attached to a parapet wall that separated my unit from one of my neighbors'. The tubing and antenna wires were visible from many directions from the street, and no one ever said anything. It was up there for six years. The CC&R's did prohibit antennas, but it may have said "no antennas without permission." I never asked for permission.

Same thing in the place I moved to across town, this time in a single family home, with CC&R's stating "no antennas without permission." I put up a 2m/440 antenna on the flat roof (same arrangement as above), and on a 5 foot mast in my small back yard I erected an MFJ Hi-Q loop, vertically oriented. It was very visible from the street! Although I referred to it as my "yard sculpture," I told neighbor friends what it was, and no one ever said anything.

I did not live in one of the ridiculously restrictive developments. So while just about any new housing (except for custom homes on land you buy) are developments that come with CC&R's that almost always say "no antennas," you can find developments that are not overly restrictive and operate more loosely. Just don't expect to put up a serious structure. The MFJ Hi-Q Loop works very, very well, and doesn't look like an antenna. Many other low-profile options are available for use in such developments.

Another good point, and largely the reason that I support the efforts
to mitigate the antenna restrictions. A person who doesn't think one
thing or another about restrictions and then becomes interested is the
loser in this situation. That is why it has to be fixed.

Which was point to begin with.

Mitigation, NOT circumvention.

136. LB719 Hearing (was Re: Flashing Light Bill Amendment Introduced (Nebraska))

Newsgroup: rec.radio.amateur.moderated
Date: 2010-01-26 18:32:03 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100126133425.DE1DC327C8E@bmailer.arrl.org>
Source record: 1508
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.policy,rec.radio.info

Nebraska Legislative Bill LB719, to allow storm-spotters to use amber flashing lights, was one of the subjects of a hearing today by the State Legislature Transportation and Telecommunications Committee.

The hearing began with very positive remarks about amateur radio and storm-spotting by Senator Bill Avery's representative. Then Pat Gerdes, KA&#65533;SGL, Region 15 Emergency Management Director, Bob Rose, Clay County Emergency Manager, Larry Dix, Nebraska Association of County Officials Executive Director, and I testified in support of the Bill. There was no testimony in opposition.

The questions raised by the Senators were primarily clarification. Two specific questions were whether there had been accidents involving spotters in the past and how to avoid the use of amber lights by those who were not storm-spotters, or other approved users.

It is my opinion that the hearing went well and that we have a good shot at having this bill voted into law. When I have more information, I will pass it on.

When I was shopping for my house in Pahrump, NV, I already was a ham so I knew enough to look into CC&Rs against antennas. Whenever I found a likely prospect, I went to the County Recorder's office to look up the deed and any other documents like CC&Rs and easements. The house I finally bought did have CC&Rs, but they were mainly about minimum house size and setbacks; not a word about antennas.

Another development in Pahrump had a no-antennas clause in the CC&Rs. And this was not a upscale hoity-toity area: the CC&Rs restricted houses to be mobile homes, i.e., manufactured and trucked to the site. A ham I knew lived here. The house belongs to his current live-in woman friend, so in a sense he did not have much choice in the matter. :-) There is no restriction on antennas on vehicles parked in the driveway, so for VHF and UHF he ran cables out to the antennas on his motorhome. For HF, he ran a long wire from the house to the detached garage using very fine wire. While we were in his back yard, he pointed it out to me from about 10 feet away, and I could not see it!

Sometimes "Right now" is imposed on people.

My brother-in-law worked for IBM, and he was promoted and transferred every 3 years to a different state. (Inside IBM, the joke is that IBM stands for "I've been moved!") IBM sold his old house for him and paid all of the expenses of buying a new house. But if he didn't buy right away, he would lose out on these benefits in purchasing the new one. My sister and he literally had 2 weeks to finalize their selection of a new house in an unfamiliar city and sign the purchaseagreement.

I'd certainly try to negotiate needed time. If they only have two weeks, I wonder if IBM has a whoops! clause. A person can have their life turned into a train wreck by buying a house that turns into a money pit, or is a a meth neighborhood, or the like. Otherwise it makes a company that forces you do make such gambles a bit less desireable to work for.

While this is veering off into OT territory, we all have choices. I won't live in a antenna restricted neighborhood. I'd buy a house in the countryside first, I'd rent and wait. In the end, it's all about choices. For me, some things that I consider choices, other might consider that it is something that they are mandated to do and that they have no choice. That's pretty sad IMO, because I think that people actually have more choices than they think they have.

But my hobbies are as important to me as my vocation, so I will live in a place where I can enjoy Ham radio.

Thanks for proving the point, Bill.

Having to look at 100 houses after telling an agent what you want means something's really wrong somewhere.

Having to fire three agents after telling them what you want means something's really wrong somewhere.

I don't think the problem was that you were excessively choosy; I think the problem was a lack of suitable houses, so the agents showed you "almost good enough" houses.

You had the resources and patience to go through all that. Many folks don't. If you spent just 1 hour per house on research, that's over 2-1/2 weeks work before the actual job of buying and moving begins.

> Michael is right: the agent represents the *SELLER*,
> not the buyer. He
> is legally obligated to disclose _some_ things, but professionally
> obligated not to disclose anything else that might lower the house's
> value. Agents are not your friends.

I disagree; they can be. But the main point is that the agent, whether a buyer's agent or a seller's agent, doesn't make any money until a sale happens.

I think all this is having a negative impact on amateur radio. Here'swhy:

1) Lots of people who live in restricted homes never pursue an interest in amateur radio because they don't want the antenna hassle. Not every restricted home has a suitable attic or yard where an antenna can be hidden. Many restrictions are such that flagpoles, birdhouses, awnings and other things are prohibited too. Plus Gladys Kravitz type neighbors who look for *any* infractions (it only takesone).

The effect is particularly strong on young people, who can't just move and whose resources are usually less.

2) Lots of hams who live in restricted homes are much less active amateurs than they would be if they didn't have the hassle.

3) Certain areas become "no-hams" zones, because more and more hams steer clear of them.

4) The publicity and visibility of amateur radio decrease over time, because nobody sees antennas, and hams operating stealth don't talkabout it.

How many of us first discovered amateur radio, or found our first Elmer, by seeing his/her antenna(s)?

For decades the trend in amateur radio has been to make the licenses easier to get, the equipment less expensive, more reliable and higher performing, and the choices of activities greater. But at the same time, there's been a slow but steady trend to make more and more homes ham-radio-unfriendly. That's not a good thing.

I'm not sure how to meet the challenge head-on; we don't have the resources of the satellite-dish folks.

When I decided to move out of the Los Angeles area, My wife and I spent almost 6 months looking for property online. We had a basic set of "conditions" to meet (as it were).

I fly out here in June last year to look at the properties and when I got home told my wife, "I think I just bought the farm."

> How many of us first discovered amateur radio, or found our first

Slight topic drift, but in my case it was because my dad worked for North American Aviation. He took me to the employee recreation park and I wandered into the Amateur Radio Club station. W6UUI. End of story, I was "ruined".

Yes, there is, but it's what we have to work with. All the agents I worked with were of the big picture on the billboard type. It would veer way OT, but my XYL who works in the flooring industry and has regular contact with contractors and RE agent, could tell you stories that would make you hair stand on end. The closest comparison I can make is that there is a strong "carny vs rube" relationship going on. And they are the carney.

> You had the resources and patience to go through all that. Many folks

Thanks for proving my point, Jim. I spent a lot of time researching my house. When a house reached "serious status", I took measurements, I talked to the neighbors, I had my lawyer go to the courthouse to check over the deed - in addition to the completely worthless deed insurance they make you buy. And he found an issue that we made the owners pay for. But the point is there is a choice, and if a person lacks the patience to find out what they are buying into, then I don't know how to advise them.

There's the old saying about buy in haste and repent at leisure.

hehe, I was wondering when Gladys would come up... 8^)

But you brought us back to Ham radio specifically, so that's great.

I agree wholeheartedly. Old Mr Bloom from up the road was my introduction to two way radio. He had a tower with one of those triple vertical dipoles on it that you could switch the pattern on - I forget what they are called. But a friend and I knocked on his door, and politely asked if we could see his radios. He told us to have our

parents call him to make sure it was okay, and then we stopped by again to see his shack. Pure magic! Lights and glowing meters and that electronic smell of tubes that whenever I smell tube equipment these days it takes me right back.

Otherwise I agree with all those points.

For as much charm as our introduction to Ham radio was, it is going to be different today.

If we decide that we need to get young people interested in Ham radio, it will have to be in a manner in which they are used to.

I had an idea about making a 2 meter HT that had texting ability, as well as voice. The texting mode would be PSK-31. Note that PSK31 actually does work with FM - it isn't as useful as the SSB version, but it still works. A kid with a Technician license and his/her friends of like qualifications would use these things similarly to cell phones, but it would be their own channels. After starting, the more adventurous might look into repeater construction. Regular Ham type stuff. Eventually they would likely gravitate to HF if they found that interesting.

It would certainly be a different paradigm than what most people who became Hams when very young went through. But we don't have novice class any more, and have to come up with something else.

Some Hams I have pitched this to have been vehemently oppose to the idea.

> "almost good enough" houses.

You go to a real estate agent. You give them your wish list. They do the best that they can to meet it. The chances of them finding a house that meets 100% of your requirements is nil if your wish list is comprehensive.

House buying is a tradeoff. The items on your wish list related to ham radio are no different than anything else. It's as silly to tell a real estate agent that you absolutely must have three bedrooms as it is to tell them that you absolutely must not have a CCR.

Maybe the house for you actually has four bedrooms. Maybe the house for you actually has a CCR but it's something that you can live with. Those are YOUR decisions. If you never see the potential properties, you won't have the opportunity to make the decision.

The key is to find a real estate agent who understands what you're looking for and is able to show you a reasonable number of homes; not everything that might conceivably meet your need, but not rule out something arbitrarily because it is 2002 square feet and your max was 2000.

Yes, CCRs are a real issue for ham radio today. But condemning them as inherently evil isn't going to accomplish anything because it's only a tiny minority of the population that wants to erect a tower in their back yard. Most everyone thinks CCRs are good and in that environment they're not going away. Best to understand how to work within the system.

actually does work with FM - it isn't as useful as the SSB version,
but it still works. A kid with a Technician license and his/her
friends of like qualifications would use these things similarly to
cell phones, but it would be their own channels.

The beauty of that is that if the kids are close enough to work simplex, all that may be required for an antenna is a small indoor one, and certainly a 5w HT isn't powerful enough to get into a neighbor's electronics. I once had a Ringo AR-2 hanging from a hook in my apartment ceiling.

In some states, CCRs can be really hidden. For example a builder may buy a portion of land already subject to restrictions. Doing a normal title search usually won't find the restriction, since the builder will seem to be the first to put Conditions, Covenants and Restrictions on that particular piece of land. Incidentally a careful shopper also has to watch out for easements.

I also have to note once again that not every potential home buyer even considers CCRs or understands that a restriction on let's say additional structures might bar a tower even if said tower is attached to the residence. One other problem is numerous municipalities try to ban antennas and fighting that ban can be expensive.

Finally let me note that in some states, a ham who loses a legal fight against a Covenant can not only end up liable for his or her legal costs but those of the party who (i.e. the neighbor or HOA) who brought the suit.

> There's the old saying about buy in haste and repent at leisure.

I suspect most folks are more concerned about location, price and size than antennas, that's true even for most hams I suppose. I don't know how much haste is involved, but focus tends to shorten in such circumstances.

I disagree!

I think it depends on how you write the requirements.

> Maybe the house for you actually has four bedrooms.
> Maybe the house for
> you actually has a CCR but it's something
> that you can live with. Those
> are YOUR decisions. If you never
> see the potential properties, you
> won't have the opportunity to make the decision.

Again, it's a matter of writing the requirements correctly. Most people
do not have the time to investigate hundreds of homes and all the
details. If they did, they wouldn't need an agent!

There's also the fact that in many situations it's not a one-person
decision. If Spouse A has a lot of time and patience but Spouse B does
not, looking at lots of homes is liable to cause Spouse B to put
pressure on Spouse A to compromise on requirements.

The way I would do it is the following:

First on the list would be the "must haves". These are minimum
requirements that cannot be compromised. For example, if I'm set on a
house in certain school districts, there's no point in showing me homes
outside those districts. If I'm moving in order to have a better
antenna farm, there's no point in showing me houses with less ground or
anti-antenna restrictions.

Second would be negotiables; things that there could be some compromise on, such as a bathroom near the shack, a multi-car garage,etc.

Third, requirements would be written in the most flexible terms possible. If I absolutely must have three bedrooms, the requirement would be "Minimum of three bedrooms" so that a four-bedroom house wouldn't be ruled out - but a two-bedroom house would be. Same for a lot of other things. A no-farm-animals CC&R would be fine; a no-antennas one is a deal-killer.

> The key is to find a real estate agent who understands what you're
> looking for and is able to show you a reasonable number of
> homes; not
> everything that might conceivably meet your need, but not rule out

And part of that is making absolutely clear what's negotiable and what isn't, and not wasting time on homes that cannot meet the requirements.

Ham radio may not be important to everyone, but it's important to me, and what I see are unreasonable rules restricting it.

> Yes, CCRs are a real issue for ham radio today.
>

> back yard. Most everyone thinks CCRs are good and in that
> environment
> they're not going away. Best to understand how to work within
> the system.

The problem is that "the system" is often specifically designed to prevent being worked within.

In my township, there is zoning of every property. Zoning is simply a set of government ordinances, and as such can be changed, amended, varianced, or overlaid with special rules. Nothing in the zoning ordinances is unchangeable, and there are strict limits on what zoning can restrict, because the power of government is constitutionallylimited.

In similar fashion there are "nuisance ordinances" about things like noise and keeping the property in reasonable repair. There are also building codes for safety reasons.

And some properties in my township have deed restrictions, a form of CC&R. These can restrict things much more than zoning can, and can be made unchangeable because they are contracts agreed to upon buying the property - one of which is to require all future owners to do the same. Most deed restrictions cannot be changed or varianced because they're specifically set up not to be.

What I see happening more and more is that deed restrictions and similar one-sided unchangeable contracts are being used to replace zoning, nuisance ordinances and building codes. And I think that's a very bad thing which must be resisted however possible.

Because if we don't, eventually there won't be anyplace left to have an antenna, let alone a tower.

I'm old enough to remember a time when, if you told an American that people were trying to sell homes where you couldn't put a TV antenna on the roof, the response would be "That's crazy; they'll never sell!" And they would have been right. But a little bit here and a little bit there, and now it's not unusual at all.

When I decided to move out of the Los Angeles area, My wife and I
spent almost 6 months looking for property online. We had a basic
set of "conditions" to meet (as it were).

I fly out here in June last year to look at the properties and
when I got home told my wife, "I think I just bought the farm."

> How many of us first discovered amateur radio, or found our first
> Elmer, by seeing his/her antenna(s)?

Slight topic drift, but in my case it was because my dad worked
for North American Aviation. He took me to the employee recreation
park and I wandered into the Amateur Radio Club station. W6UUI.
End of story, I was "ruined".

Hey Jeff: I thought it was when you stuck the all-metal table knife into
the live electrical outlet as a child that did it.

American culture has changed a lot during the past few decades. When did we start seeing the McMansions? The idea of "the perfect house" is much different now than 30-40 years ago.

The public votes with its wallet. As you point out, if there was general displeasure with CCRs, houses with CCRs wouldn't sell. I don't see any evidence that CCRs significantly reduce the sales potential of the property involved, and their growth suggests that the general public views them in a positive light.

You may perhaps think my views are pessimistic; I prefer to consider them realistic. As a tiny minority, hams are unlikely to have any effect on the trend to attach CCRs to property. That's why I think it's better to know as much about the system as possible and learn how to work within it. Yes, it can be difficult to work within it. There are many things in life that are neither easy nor ideal.

Our part is to point out the inadvertent problem caused by the antenna restrictions, and to see if we can get legislative action. Whether it be that proposed antennas be given a review process, or some other such hoops to jump through, we should be accommodated. And in those neighborhoods there will be some opposition. There is no doubt that some people won't like it. Lot's of people don't like antennas because they've been told they don't IMO. My wife doesn't like antennas, but she really can't tell me exactly why. In the end it 's some vague comment about "ugly". Yet to me, an antenna is a pretty cool looking thing, certainly more attractive than a ceramic yard gnome.

I'm sympathetic to the problems of Hams who live in CCR antenna restricted 'hoods, even if I think they didn't have to be there in the first place.

So it's going to be a combination of things:

Work within the legislative system to mitigate antenna restrictions.

Don't live in a neighborhood that has such restrictions in the first place.

But if you do, you might become an officer in the HOA for a while. Some times surprising accommodations can be made.

And who knows, there were people who made some publicity like the fellow who's HOA wouldn't let him put a nice little weather hut for his kids to stand in while waiting for the school bus. The yard full of pink flamingos he planted were perfectly "legal" however. The HOA relented, he put up the hut, and the flamingos went away.. Same with the fellow they wouldn't allow to put up a flag pole. Often times there are little "things" you can do. But in both of those examples, I would not want to live in a neighborhood where some odd aesthetics make it okay for my children to freeze to death, or make it some sort of crime to display my country's flag, I mean, those are people I don't want to be around at all.

==> + PUBLIC SERVICE: HAITIAN AGENCY ANNOUNCES CONTACT INFORMATION FOR
AMATEURS GOING TO HAITI TO PROVIDE DISASTER RELIEF

The offices of CONATEL -- Haiti's national telecommunications
regulator -- were destroyed in the January 12 earthquake that
devastated the island nation. This office, like the FCC in the US,
administers the Amateur Radio Service in Haiti. Hams interested in
traveling to Haiti to help provide communications support have been at
a loss as to whom to contact. CONATEL has set up temporary offices in a
Port-au-Prince suburb and has indicated that those volunteers who wish
to operate in Haiti to assist with disaster relief need to contact the
agency to get formal reciprocal operating clearance. Read more here
<http://www.arrl.org/news/stories/2010/01/26/11310/?nc=1>.

==> + PUBLIC SERVICE: ARRL SENDS HAM AID EQUIPMENT TO HAITI
```

While the communications infrastructure in earthquake-ravaged Haiti is being rebuilt, there is need for Amateur Radio communications. To assist in this effort, the ARRL's Ham Aid program is providing equipment for local amateurs to use. On Friday, January 22, the League sent a programmed Yaesu VHF repeater with a microphone, as well as ICOM handheld transceivers, Yaesu mobile 2 meter rigs with power supplies and Kenwood mobile 2 meter rigs. Comet antennas, Larsen mobile antennas with magnet mounts, coax and batteries were also included in the package. Most items were donated by their manufacturers; the repeater and power supplies were purchased by the ARRL several years ago using post-Hurricane Katrina grant funds.

On January 25, Doug Lapin, K1OY, the Dominican Republic's Ambassador Accredited to the Secretary of State of Foreign Relations, stopped by ARRL Headquarters on his way back home. When he left, he carried with him 10 Kenwood handheld receivers, courtesy of the League's Ham Aid program. "We're making progress," Lapin told the ARRL on January 27. "The [Ham Aid package you sent] is stuck in customs. I'm working on getting it out. Members of the Radio Club Dominicano were much appreciative of the radios I brought and found it funny that my hand-carried radios arrived before the package. If we get it out, we will go back to Haiti tomorrow with the equipment."

Read more here <http://www.arrl.org/news/stories/2010/01/22/11304/?nc=1>, including information on how you can help the Ham Aid program in Haiti.

==> + ARRL LEADERSHIP: KENT OLSON, KA0LDG, APPOINTED DAKOTA DIVISION VICE DIRECTOR

In one of her first actions as ARRL President, Kay Craigie, N3KN, has appointed Dakota Division Assistant Director and former North Dakota Section Manager Kent Olson, KA0LDG, as the new Dakota Division Vice Director. The position became vacant when Dakota Division Director Jay Bellows, K0QB, was elected International Affairs Vice President at the 2010 ARRL Board of Directors Annual Meeting and Vice Director Greg Widin, K0GW, moved into the Director position. Read more here <http://www.arrl.org/news/stories/2010/01/25/11307/?nc=1>.

==> FCC NOTICE OF PROPOSED RULE MAKING TO REVISE AND CLARIFY VANITY CALL SIGN RULES OPEN FOR COMMENTS

Late last year, the FCC issued a Notice of Proposed Rule Making <http://www.arrl.org/news/stories/2009/11/25/11220/?nc=1> (NPRM) -- WT Docket 09-209 <http://edocket.access.gpo.gov/2010/pdf/2010-1262.pdf> -- seeking to amend the Commission's Amateur Radio Service rules to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations. Interested parties may make comments on the NPRM in the following ways: via the Federal eRulemaking Portal <http://www.regulations.gov> or via the FCC's Web site <http://www.fcc.gov/cgb/ecfs/>. Comments must be submitted by March 26, 2010; reply comments are due no later than April 12, 2010.

==> + THE DOCTOR IS IN: TUBES AND TUBE REPLACEMENTS

Rick Richardson, VE7WF, of New Westminster, British Columbia, recently has acquired some vintage vacuum tube-based equipment. He recalled that years ago, there was a product on the market -- Tubesters -- solid state replacements for vacuum tubes. He asked the ARRL's Doctor if anyone still manufactures such devices.

Here's what the Doctor had to say:

I do remember them, as well. If I recall, these were popular in the 1970s. To my knowledge, they are no longer available. You may find some on Internet auction sites from time to time. But before you go too far in that direction, I would think about what problem you are trying to solve. Old tube gear works very well with tubes, probably with better performance than "force fit" solid state replacements. In those days, many solid state receivers were quite vulnerable to overload and other problems, for example.

The nice thing is that most tubes are still available, often unused in original boxes and generally at similar prices to what they cost 50 years ago. An Internet search will turn up a number of places that sell tubes. I've always had good luck with Antique Electronic Supply <http://www.tubesandmore.com/>. If used within their ratings, tubes can last many years. I have WW2 vintage equipment that still works with some original tubes. I also have Drake tube based equipment from the period still going strong.

ARRL Lab Engineer Bob Allison, WB1GCM -- an amateur with years of dedicated experience with vintage gear -- notes that if the equipment has sat around for many years, the chances are the tubes are gassy. The glass part of a tube is not a perfect envelope. One molecule of air at a time leaks into the tube and after a few years, the performance degrades. If a tube hasn't been used in 20 or 30 years, it can appear to be totally dead. The trick to solve this to let the radio run for a day or two. The filaments in the tubes will eventually burn away whatever air is inside and the tubes will often be back in good shape.

The only exception that I often make is to replace power rectifiers with plug-in solid state equivalents. I usually make my own, but they are also commercially available. My rationale is that rectifier tubes generate a lot of heat the old gear doesn't need. In addition, the filaments can draw 15 to 20 W and by removing that load from the power transformer it should stay cool and last longer. Unlike tubes, power transformers are not so easy to find. If needed, the original condition can be restored by unplugging the solid state unit and putting the tube back.

Thanks Doctor! Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST <http://www.arrl.org/qst> , the official journal of the ARRL.

==> + ARRL AUDIO NEWS TEMPORARILY SUSPENDED

With the coming of the new ARRL Web site, we are looking at ways to better bring you Amateur Radio news. In order to do this properly, we will be temporarily suspending the ARRL Audio News while we look for solutions that will enable us to provide the technical quality and distribution channels that you expect from the ARRL. The last edition of the ARRL Audio News (for now) will be produced on Thursday, January 28.

==> + NOW YOU KNOW!: PHIL "GIL" GILDERSLEEVE, W1CJD

By ARRL News Editor S. Khrystyne Keane, K1SFA

Longtime readers of QST will certainly remember the cartoons of Phil Gildersleeve, W1CJD (ex-1ANE). Known affectionately as "Gil," he drew more than 1500 cartoons for the ARRL, many of them appearing on the pages of QST.

Gil started cartooning for the ARRL back in June 1927. His characters -- such as Jeeves the Butler and the gang at the Podunk Hollow Radio Club -- became old friends to readers of QST. Gil's first Jeeves cartoon was published in February 1940: From the other room comes his master's voice, saying, "Jeeves, come here and help me look for DX!" Jeeves, not really sure what exactly DX is, comes on the run with a road map, a telescope, binoculars, a lantern, a compass and a butterfly net in hand! As a native of the great state of Texas, my favorite Jeeves cartoon shows him trying to push a giant QSL card (from Texas, of course!) through the door -- the card can barely get through. Of course, things are bigger in Texas! If you ever tour ARRL Headquarters, you can see a large version of this cartoon in the second floor hallway.

The mythical Podunk Hollow Radio Club depicted the idiosyncrasies of a group of radio enthusiasts getting together. The cover for the June 1964 issue of QST shows the Podunkers -- hundreds of them -- happily camped out in a forest setting. In the large tent in the rear, several hams are operating their radios. In the foreground, several more are chatting up a couple of attractive girls in a convertible, little cartoon hearts fluttering over one ham's head. And off to the far right, the Department of Conservation is beginning to set up their blasting apparatus with its accompanying signs of "Turn off all two-way radios!"

But Gil also used his cartoons to teach proper on-the-air behavior. In March 1938, he drew an eight panel cartoon of a man calling CQ on CW. Each panel had the man getting older, where by the seventh panel, he was old, bald and with a long beard, spider webs all around. The last panel showed a tombstone that read "Here lies C. Q. McGall. He died without even signing his call." The next month, Gil drew a single panel cartoon with a line separating the panel into two parts. In the first part, he showed a radio amateur "all worn to a frazzle" from handling so much traffic, as well as dealing with QRM. The second half

showed two amateurs handling traffic as a team, "all full of vim and vigor." Gil's point was spot-on: "Cooperative operating does a better job with greater efficiency all around. Instead of harassed, inefficient, overworked operators, put key stations on a 6 or 8 hour basis, with relief and second operators for efficiency during intensive operation."

Gil's interests were not limited to ham radio. A native of Portland, Connecticut, he began working for the Middletown (CT) Press as the Portland correspondent in 1940, became county editor in 1943 then city editor in 1945. Sometime later, he was named news editor. His cartoons also decorated the Press and various trade journals. He served in the volunteer fire company and was captain of Fire Company No 2 for nine years, as a member of the Portland Board of Education for eight years, and as a vestryman in his local church.

In 1966, he was chairman of Portland's 125th anniversary celebration. As part of the celebration, he drew the town seal, depicting a number of elements of historical Portland. Foremost is an old-time oxen driver with his team, pulling a large brownstone sling; the greater part of Portland's 19th century wealth came from the brownstone industry. To the left of the oxen is a small building like those visible in old pictures of the quarries. Its tall chimney is smoking, connoting industry. To the right is another such building atop the quarry wall with a pulley for lowering things into the quarry.

<http://www.arrl.org/catalog/?item=0364> Gil passed away on November 4, 1966. "His work became a tradition," wrote former QST Managing Editor Laird Campbell, W1CUT (SK) in the foreword of Gil: A Collection of Classic Cartoons from QST <http://www.arrl.org/catalog/?item=0364>. "His knack for expressing ideas, feelings or situations unique to Amateur Radio was, and still is, unexcelled. [He] could take a rudimentary idea and turn it into a final masterpiece through the uncanny strokes of his pen. Gil's creations will never be forgotten...his conceptions remain alive in the minds of both old-timers and newcomers to Amateur Radio." Now you know!

==> SOLAR UPDATE

Tad "Who countest the steps of the Sun <http://www.poetryfoundation.org/archive/poem.html?id=172905>" Cook, K7RA, reports: We've seen average daily sunspot numbers for this reporting week. Since last Thursday through yesterday, the numbers rose more than 9 points to 28; the average solar flux slipped more than 2 points to 81.9. Geomagnetic indices were a tiny bit lower. We should be seeing sunspot numbers decline over the next five days. The predicted solar flux for January 28-31 is 78, 80 on February 1-2, 82 on February 3-4 and 88-89 for the following six days. We don't see any geomagnetic upset predicted until February 16, with the planetary A index only rising to 10. On the STEREO image <http://stereo.gsfc.nasa.gov/>, we can see sunspot 1041 in the Sun's southern hemisphere, past the central meridian. We also see a sunspot emerging from the unseen area of the

sun (currently around 12.5 percent, not visible yet to the STEREO mission) that is perhaps five days from emerging over the Sun's eastern limb. Look for more information in the Solar Update -- including some clarification, correction and expansion of the info in last week's bulletin <http://www.arrl.org/news/stories/2010/01/22/11302/?nc=1> concerning SID (Sudden Ionospheric Disturbance) events from Dick Grubb, W0QM of the Space Weather Prediction Center in Boulder, Colorado -- available on the ARRL Web site on Friday, January 29. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Blake's Ah! Sunflower <http://www.poetryfoundation.org/archive/poem.html?id=172905>.

==> THIS WEEK ON THE RADIO

This week, there is a running of the NCCC Sprint on January 29. The CQ 160 Meter Contest (CW) is January 29-31. The REF Contest (CW), the UBA DX Contest (SSB) and the SPAR Winter Field Day are January 30-31. The Classic Exchange (CW) is January 31-February 1. Next week, there is another running of the NCCC Sprint Ladder on February 5. Look for the FYBO Winter QRP Sprint, the Minnesota QSO Party and the AGCW Straight Key Party on February 6. The Vermont QSO Party, the YL-ISSB QSO Party (CW), the 10-10 International Winter Contest (SSB), the British Columbia QSO Party, the Delaware QSO Party and the Mexico RTTY International Contest are February 6-7. On February 7, check out the North American Sprint (CW) and the ARCI Fireside SSB Sprint. The New Mexico QSO Party is February 8. The ARRL School Club Roundup <http://www.arrl.org/SCR/> is February 8-12. The NAQCC Straight Key/Bug Sprint is February 10 and the CWops Mini-CWT Test is February 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member

Amateur Radio Newsline(tm) Report 1694 - January 29, 2010

Amateur Radio Newsline report number 1694 with a release date of
Friday, January 29, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in Hawaii gear up to back a law that
will insure their right to operate mobile, earthquake relief efforts in
Haiti switch from HF to VHF, the ARRL Board discuses a lot of rescue
radio and accolades from the QCWA to a ham who has given his entire
life to the hobby, His name is Harry Dannals, his call is W2HD, and
you can find out the details on Amateur Radio Newsline(tm) report
number 1694 coming your wayright now.

(Billboard Cart Here)

**

RADIO LAW: HAWAII HAMS ASKED TO SUPPORT MOBILE CELL LAW THAT EXEMPTS
AMATEUR RADIO

Hams in Hawaii are being urged to support a state measure that while
banning the use of hand held cellular phones does exempt hams and other
users of mobile two-way radios. This, according to Ron Hashiro, AH6RH,
who tells Newsline that support from the ham in the street is crucial
to its passage:

--

AH6RH: The State Legislature in Hawaii has submitted House Bill Number
2225 that mirrors the cellphone bill that is active in Oahu. It is vital
that all hams in Hawaii take the time now to write or e-mail their state
representatives to support amateur radio in this bill.

"Also, they should take the time to submit testimony to the House Committee
on Transportation. As of yet there is no hearing date set, but as soon as
that takes place I'm sure that the amateurs will make support their right
to operate their radios while mobile."

--

Hashiro says that with a strong showing of support from the Hawaiian ham
radio community that this bill has a good chance to become law:

--

AH6RH: "I'm pretty sure that we can continue the exemption for amateur
radio because of the hard work that was done on Oahu and (both) the

testimony and the impact of amateur radio during Hurricane Iniki, during the earthquake of 2006 and even during a recent island-wide generator power outage. Once again the community has seen the value of amateur radio and this is something that the council members have recognized."

--

According to AH6RH, this bill, if passed into State law, will override the ordinances and bills at county levels. Hams in Hawaii and those around the world interested in keeping track of this pending legislation can follow at http://www.capitol. hawaii.gov/ session2010/ gethearing. asp?query= HB2225 (AH6RH, KH6QX)

**

RESCUE RADIO: HAITI HF EMCOMMS WINDING DOWN

Long distance amateur radio communications into and out of quake-ravaged Haiti is quickly disappearing as we hear from Amateur Radio Newsline's Bruce Tennant, K6PZW:

--

As the recovery in Haiti continues, the need for international ham radio communications on the High Frequency bands is winding down. In the weeks since the quake, Haitian telecommunications personnel and international relief workers have been doing all they can to rebuild communications into and out of that nation.

International telecommunications companies have brought in portable cellular telephone nodes and numerous transportable satellite ground stations. And according to news reports here in the United States, at least one geosynchronous communications satellite has been repositioned as a dedicated international communications link to and from Haiti to carry telephone, data and video. Because of this an all clear has been issued for almost all the frequencies on 75, 40 and 20 meters that had been in use during the initial phase of the post earthquake recovery effort.

According to a news release from the International Amateur Radio Union Region 1, as of 1800 UTC on January 22nd, the frequencies of 14.300, 14.265, 7.045, 7.065, 7.265, 3.720 and 3.977MHz were returned to normal use. Also, and the groups who have been passing messages on those frequencies were to revert to monitoring mode or to their normal operations.

And a similar release comes from Dr. Cesar Pio Santos, HR2P. Santos is the IARU Region 2 Emergency Coordinator and his statement announced the release of several H-F frequencies including 7.045 and 3.720 MHz for normal use.

That said, the IARU wants to remind hams worldwide that there are still a number of radio amateurs in the Haiti who are attached to various relief groups. These hams may still be heard on the amateur bands on a number of frequencies according to their particular needs and to maintain contact with their home countries. The IARU asks that you listen before transmitting on frequencies known to handle Haiti relief traffic.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Giving priority to earthquake relief communications is expected of all of us. (ARNewsline(tm), ARRL, Others)

**

RESCUE RADIO: HAITI HAM RADIO EMCOMM EMPHASIS NOW GOES VHF

While the requirement for log distance high frequency ham radio communications to and from Haiti is quickly coming to an end, the need to expand lines of communications within that nation are ever increasing. Bill Pasternak, WA6ITF, is in the newsroom with this part of the story:

--

While both cellphones and text messaging nodes are being installed in Haiti as fast as humanly possible, these are primarily being used for international communications by aid workers. And with Haiti's in country communications infrastructure years from full reconstruction, ham radio on 2 meter FM is quickly becoming a primary communications lifeline for relief operations.

As reported last week, hams from the Dominican Republic risked their lives trying to restore ham radio communications in Port au Prince. They had to retreat but were able to set up several repeaters near the Dominican Republic's border with Haiti that when linked give coverage of the entire Haitian nation. These machines were quickly pressed into service by the Red Cross and likely other relief agencies.

Also, a D-Star repeater was supposed to be on its way to Port Au Prince, but at airtime its not known if the group that was supposed to deliver and install it has yet arrived.

But more communications channels across Haiti are still needed. To help in this area, on Friday, January 22, the American Radio Relay League sent a programmed Yaesu VHF repeater with a microphone, as well as ICOM handheld transceivers, Yaesu mobile 2 meter rigs with power supplies and Kenwood mobile 2 meter rigs down to Haiti via the Dominican Republic's national ham radio society. The supplies shipped also included Comet antennas, Larsen mobile antennas with magnet mounts, coax and batteries. All of these items were from the ARRL's Ham Aid program. This gear had been donated by their respective manufacturers out of concern for the situation in Haiti.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The gear was sent to the Radio Club Dominicano via its president for distribution most likely because it is still impossible to know the level of survival of hams within Haiti or their ability to provide in country emergency communications services to that quake ravaged nation. One thing

that is desperately needed by the Radio Club Dominicano is funding to purchase a generator to power the repeaters. If you can help in this, please contact Allen Pitts, W1AGP, at ARRL Headquarters. The phone number is 860-594-0200 and his e-mail is W1AGP at ARRL dot org. (ARNewsline(tm), ARRL, Others)

**

RESCUE RADIO: OBTAINING PERMISSION TO OPERATE IN HAITI

And be it on H-F or VHF, amateurs wishing to operate in Haiti to assist with disaster relief will need to contact that nations telecommunications regulator to get formal reciprocal operating clearance. Don Wilbanks, AE5DW, reports:

--

If you are a ham who has been asked to come to Haiti to operate on behalf of earthquake relief operations, you will need to get a temporary reciprocal operating permit from the Haitian government. To accomplish this, CONATEL which is an acronym for Haiti's National Council of Telecommunications has set up temporary offices and now has phone and e-mail service available. This, to clear those who may respond to the need for communications volunteers.

In a press release, CONATEL says that it has set up a satellite office of at Number 97 of the Avenue Panamï¿½ricaine in Pï¿½tion-Ville with the goal of
assuring the continuity of its work. This arrangement says the agency will allow, among other things, better coordination for establishing a temporary emergency telecommunications network in Haiti.

Anyone who needs to operate radio equipment in Haiti is asked to contact CONATEL at its temporary address or by phone throughout the day. This by dialing international calling code 011, then the Haitian country code 509 followed either by 3454-0541, 2516-0000 or 3702-1414. CONATEL can also be reached by e-mail to techommunication@yahoo.fr or info@conatel.gouv.ht.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, near New Orleans.

--

No matter how you contact CONATEL it is imperative to do so before any use of telecommunications equipment or the spectrum resources in Haiti. This, the agency says is to avoid interference problems and possible conflicts between the incumbent operators established in Haiti and those who are newly operating in what CONATEL calls an unusual
circumstance. (ARNewsline(tm), ARRL, Others)

HAM RADIO POLITICS: ARRL BOARD OF DIRECTORS LOOKS AT EMCOMM AND OTHER ISSUES

The ARRL Board of Directors held its 2010 Annual Meeting on January 15th and 16th in Windsor, Connecticut with emergency communications front and center on the agenda. Amateur Radio's Mark Abramowicz, NT3V, takes a look at what was accomplished:

--

Three major steps taken by the board on the topic surround the appointment of an advisory committee; signing a memorandum of understanding with the American Red Cross; and proposing a revision in the federal regulations related to amateurs and participation in emergency communications drills on behalf of an employer.

After rejecting the idea of an advisory board at it's meeting last July, the board did an about face and appointed just such a committee.

It's expected that the Emergency Communications Advisory Committee will play a large role in helping to shape ARRL board policy on a primary mission of the amateur radio service - being prepared to respond in times of emergency or disaster both here and abroad.

The second step, signing of a Memorandum of Understanding with the American Red Cross - appears to resolve the thorny issue of criminal background checks required by the organization for all volunteers.

Several amateur radio volunteers expressed concern that the contractor hired by the Red Cross to do such background checks had far too much latitude in the kind of information it could gather - including credit reports and other personal information.

The M-O-U now gives Amateur Radio Emergency Service volunteers permission to obtain and pay for their own criminal background check from a law enforcement agency rather than submitting to the scrutiny of the Red Cross' private contractor.

The agreement also requires the Red Cross to give ARRL members this information to give them an opportunity to make an informed decision as to whether they want to volunteer with the Red Cross.

Finally, the board directed ARRL staff to petition for a change in Section 97.113(a)(3) of the FCC rules related to amateurs taking part in emergency preparedness or disaster drills.

It wants to give radio amateurs the ability, on behalf of an employer, to take part in such activities.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The complete Minutes of the 2010 Annual Meeting of the ARRL Board of Directors will be available soon on the ARRL Website. That's in cyberspace
at www.arrl.org. The next meeting of the ARRL Board of Directors is scheduled for July 16th and 17th. (ARNewsline(tm) from ARRL release)

**

RESCUE RADIO: FCC GRANTS ANOTHER 97:113 EMCOMM WAIVER REQUEST

The FCC has granted a yet another request for a waiver of Section 97.113 of its rules. This from the Grundy County Emergency Management Agency in Morris, Illinois to use the services of four ham radio operators in its employ to take an active part in several upcoming emergency preparedness drills.

In granting the waiver the FCC specifically stated that it would permit Jim Lutz, N9UCP; Joe Schroeder, KC9JYZ; Chris Kindelspire, KC9GCK; and John Watters, KC9KKO to take part in these exercises slated for March 24th and July 28th at various locations in Grundy County. In granting the request the FCC noted that while Section 97.113(a)(3) of its rules normally prohibit hams in an agency's employ to take part, it granting the waiver request as being appropriate under the circumstances presented in the Grundy County Emergency Management Agency's filing. You can read the entire text of the waiver grant at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-10-124A1.doc (FCC)

**

RESCUE RADIO: ALABAMA HAMS SAY THAT THEY SAVE THE COUNTY THOUSADS OF DOLLARS

According to a January 20th report in the Athens Alabama News Courier, ham radio operators have saved the county over a hundred thousand
dollars. This, through their volunteer emergency communications expertise.

The article quotes Joe Ivey, W4JSI of the Limestone Amateur Radio Emergency Service as telling the County Commission that his organization contributed $136,625.47 in services to the community in the last calendar year. Ivey said that this tops the previous year donated service value by $8,000.

Ivey noted that what the club does is at no cost to anyone. He added that local hams perform communication for organizations from the Emergency Management Agency to the Christmas parade..

County Commission Chairman David Seibert thanked Ivey and the Limestone Amateur Radio Emergency Service for the valuable public service that they perform. (eHam)

**

RADIO LAW: FCC BANS 700 MHz WIRELESS MICS AS OF JUNE 12TH

The FCC has prohibited the further distribution and sale of devices that operate in the 700 MHz band. This, to clear this spectrum for public safety and 4th generation or 4 G consumer communications gear.

In its January 15th release, the FCC says that the spectrum in the 700 MHz band had already been auctioned to several wireless service providers following the June 12, 2009 Digital television transition. It also notes that its Order and Further Notice of Proposed Rulemaking primarily affects wireless microphones and those who operate them.

The FCC says that a sunset period running through mid-June of this is being provided for those currently using 700 MHz wireless mics. As of June 12, 2010 use of those devices will be prohibited. More on this story is on line at www.fcc.gov/cgb/wirelessmicrophones. (FCC)

**

RADIO LAW: FCC ASKS CONGRESS FOR ADDITIONAL MONTH ON BROADBAND PLAN

The chairman of the Federal Communications Commission is asking for a one month extension on the mandate that his agency has develop a national broadband plan that it is required to submit to Congress.

The creation of such a blueprint was mandated by last year's economic stimulus bill. It was due to lawmakers by Sunday, February 17th. But the FCC is now asking for an extra month to finish digging through the massive volume of public comments that it has received over the past 11 months on how to make universal broadband a reality. The staff involved in preparing the plan also wants more time to brief the FCC's five commissioners and members of Congress.

The request for an extension needs to be approved by the Senate and House Commerce Committees. They are the bodies in Congress which have jurisdiction over the FCC. (Published news reports)

**

ENFORCEMENT: $51 MILLION JUDGEMENT IN SAT-TV SOFTWARE CASE

It's the biggest judgement ever issued against an individual for helping others to obtain pay television without paying the monthly fee. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno, with the rest of the story:

--

The Dish Network, EchoStar and NagraStar satellite services have won a $51 million dollar judgement against one Robert Ward. This, after a federal judge in Tampa, Florida, found that Ward had posted software on the Internet that would permit people to receive subscription satellite TV without paying a fee.

The three plaintiffs said the summary judgment ruling made two significant findings that will strengthen their companies' ability to pursue cases like this in the future. First the court held that the posting of illegal software constitutes a violation of the Communications Act. Second that

the statutory damages in the case should be calculated based on how many individuals downloaded the illegal software.

There is a reality side to this matter. That being weather or not any of the plaintiffs will be able to collect any or all of the $51 million dollar judgement against Ward remains to be seen.

I'm Don Carlson, KQ6FM, in Reno.

--

Collect it or not, the amount of the judgement and its implications to future cases of this type has send what can best be called shockwaves through the on-line communities that believe that they have a legal right to decode and watch pay television stations free of charge. More on this matter is on-line at http://www.rbr.com/tv-cable/19881.html (RBR)

**

CHANGING OF THE GUARD: FORMER FCC COMMISSUIONER JAMES QUELLO - S.K.

Former FCC Commissioner and Interim FCC Chairman of the Federal Communications Commission, James H. Quello died Jan. 25 of heart and kidney failure at his home in Alexandria, Virginia.

Quello, who was often called the informal dean of the commission, joined the body in 1974 and was named Interim Chairman in 1994. While a commissioner Quello was best known as a strong defender of free, over-the-air broadcasting . But while he exited the commission in 1997 Quello kept his hand in the business and policy that had been his life. He had most recently been a public policy consultant for the law firm of Wiley Rein and Fielding working alongside former FCC Chairman Richard Wiley. He was also the founder and chairman of the board of the James H. and Mary B. Quello Center for Telecommunication Management and Law at his alma mater of Michigan State University.

James Quello is survived by his sons, James M. and Richard B. Quello, his wife, Kim, granddaughters Susan Butler Quello and Diane Watson, and a great granddaughter, Bethany Watson. Interment will be held at Arlington National Cemetery. He was 95. (B & C)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: HARRY DANNALS, W2HD, NAMED PRESIDENT EMERITUS OF THE QCWA

A name synonymous with ham radio for over seven decades has become only the third person ever elevated to the post of President Emeritus of the Quarter Century Wireless Association. This as the organization names Harry Dannals, W2HD, of Charlottesville, Virginia to this truly prestigious standing.

Perhaps best known for his decade from 1972 to 1982 as president of the American Radio Relay League, Harry also served as President of the QCWA from 1989 to 1994. As such he is the only person to have ever held this leadership position in both organizations.

In addition to his work with both the QCWA and ARRL where he also holds the status of President Emeritus, the former W2TUK is a Fellow in the Radio Club of America, a member of the Society of Wireless Pioneers, the Old Old Timers Club, and the Veteran Wireless Operators Association. In 2002 he was inducted into the CQ Magazine Amateur Radio Hall of Fame.

Harry Dannals elevation as President Emeritus of the Quarter Century Wireless Association was announced on January 22nd. The only other ever elected to this position within the QCWA were Leland W. Smith, W5KL, and Lewis 'Mac' McCoy, W1ICP, both of whom are now Silent Keys.

In making the announcement, QCWA President Bob Roske, N0UF, said that he had earlier in the day spoken with W2HD. He told Newsline that Harry was very happy to receive the honor. N0UF added that this is the first time in a long time he actually heard a smile! (QCWA)

**
NAMES IN THE NEWS: RICHARD FISHER KI6SN NAMED NEW EDITOR OF WORLDRADIO ONLINE

CQ Communications, Inc. has announced that veteran journalist and writer Richard Fisher, KI6SN, has been named the new Editor of WorldRadio Online, effective with the April issue.

The 59 year old Fisher recently completed a 35-year career in newspaper print and online journalism. This, in a variety of reporting, editing and management roles. He also has a 17-year association with WorldRadio, first joining the magazine in 1993 as its QRP columnist. This is a post he held until the magazine's transition from print to online in February 2009.

Fisher is currently a columnist for three magazines published by CQ Communications. In addition to his WorldRadio Online editing duties, he will continue to write the "Washington Beat" column for Popular Communications, the "Public Service" column for CQ Amateur Radio, and the "Trail-Friendly Radio" column for WorldRadio Online.

Fisher will succeed Nancy Kott, WZ8C, who has been Editor of WorldRadio and WorldRadio Online for the past eight years. After guiding Worldradio from print to electronic publication she announced her impending departure in the February issue of the on-line magazine. (CQ)

**

HAM RADIO IN SPACE: SUMBANDILLASAT TEMPORARILLY SUSPENDS OPERATIONS

The Amateur Radio FM transponder on the SO-67 SumbandilaSat ham radio satellite has been temporarily suspended. This, to permit completion of the satellite commissioning activities

According to Jan Albert writing on the On the AMSAT bulletin board, there is little more than 6 weeks left in which to complete the commissioning activities on SumbandilaSat before operations are planned to be handed over in middle-March to the Satellite Application Center. That's who will then continue to operate the satellite on behalf of the Department of Science and Technology which actually owns the satellite. Since progress is currently hampered by the various South Africa AMSAT payload activities,

Albert says that there is no choice but to temporarily suspend this service on SO-67. He adds that plans are to have SO 67 back on the air by the end of March or sometime in early April. So far SumbandilaSat has successfully executed more than 320 payload activation's since hams began using the ham radio payload at the end of 2009. (ANS)

**

HAM RADIO IN SPACE: NEW AO-7 AMERICAS QSO DISTANCE RECORD

A new distance record has been set within the Americas over an aging ham radio satellite. On Sunday January 24th at 22:52 UTC Joe Spandler, K3SZH in Harrisburg, Pennsylvania, held a short contact with Francisco Ramires, PY2OV in Sao Paulo, Brazil using the 70 cm to 2 meter transponder on the 35 year old AO-7 ham-sat. The distance between the two stations was 7738 km and is believed to be the furthest contact within the Americas, but falls just short of the ZS6BB to EA6SA international contact at a distance of 7766 km. ZS6BB to EA6SA stands as the record for the AO-7 bird which was launched on November 15, 1974 on board a Delta rocket from Vandenberg Air Force Base in California. (Southgate)

**

WORLDBEAT: SV2SAP SAYS RETURN SY TO MT ATHOS

Mount Athos resident radio amateur, Monk Apollo, SV2ASP/A is calling for the return of SY prefix to the monastery`.

For many years the prefix 'SY' was assigned exclusively to the DXCC entity Mount Athos in Greece. This was later changed to 'SV/A' but for many radio amateurs the SY prefix is still connected only to Mt Athos, although every Greek radio amateur may apply for a SY prefix.

According to the Southgate News, this is a thorn in the side of Monk Apollo. And now he is asking DXers from all over the world to send an e-mail to the Greek licensing authority at yme@otenet.gr that asks it to stop this practice.

At the moment Monk Apollo is active mainly on RTTY because this mode is silent and does not disturb the other monks. He prefers operating on 160 through 30 meters from 1700 to 2100 UTC. However be aware that his SV2ASP/A call was used by a pirate operator at least once this year on January 12th. (Southgate)

**

DX

In D-X, word that a group of radio amateurs across Spain will activate the special callsign AO1ANT between February 22nd and the 28th to celebrate the 'Seventh Antarctic Week' international event. Their reference number will be WAP-180 and their activity will be on SSB, CW, PSK31 and RTTY modes, using all the amateur bands from 160 through 10 meters. QSL via EA1GHT, either direct or by the Bureau.

And lastly, XR9JA will be the callsign of the upcoming Greenwich Island operation by XQ5CIE, CE6UFF, F6DXE and CE5COX. The operators will be there from February 1st to the 28th using CW, SSB, and PSK-31 on 160 through 6 meters. They also plan satellite operation using AO-51. QSL via CE5JA either direct or via the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: A FINANCIAL HEALTH UPDATE ON NEWSLINE

And finally this week, we have a brief update on Amateur Radio Newsline's financial health. Here again is our President and Producer, Bill Pasternak, WA6ITF:

--

Before I go any further, I want to thank each of you who sent notes and e-mails of condolence on the passing of our Treasurer and Support Fund Administrator Andy Jarena, N6TCQ. It made us feel good to know that so many of you felt toward Andy the way that we did.

It has been a very busy several weeks for me after taking on the added role of interim treasurer after Andy left us. Nor was it a very happy time because Andy was one of my closest and dearest friends for over two decades. And I was honored to have been asked to represent his world of interest in amateur radio at a celebration of his life that his life partner Judy Hurst and his sister Ann Albertson held in his memory on Saturday January 23rd.

In keeping with Andy's desires, this was not a sad gathering. Rather it was a group of people whose lives had cross Andy's and who remembered him with sincere fondness, friendship and warmth. And in retrospect, for many of us it was that catharsis we needed to close this chapter of our lives by being able to publicly say goodbye to our friend who had been an inspiration to all of us.

On another topic, I and the entire Amateur Radio Newsline production team want to thank those of you who heard our emergency funding plea and made a contribution. Thanks to you caring and thanks to your coming to our financial rescue we have made it through January and have enough to hold us thorough at least the first few weeks of February. After that -- well -- it remains to be seen, but for the next few weeks we should be OK.

Last but by no means least, we wish we had the resources to send each of you a personal note or card to thank you. Unfortunately we do not have that luxury. So, from the collective hearts of all of us at Amateur Radio Newsline we send our "thank you" in this way. Over the Internet. Over the telephone and over the airwaves, It comes from our sincerest gratitude to which Ill add that having you as listeners and supporters makes us feel truly blessed.

I know that Andy said this many times in the past, but please permit me to say that you are not just an audience, You are in your own way, a vital part of what we like to the Amateur Radio Newsline family and we are truly fortunate to have you on our team.

Again, I say thank you -- and for this week -- 73.

I'm Bill Pasternak, WA6ITF.

--

Than you Bill. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening.

> something's really wrong somewhere.

At the time, there was a speculative bubble, and many homeowners expected unreasonable prices for their property. In addition, I had certain requirements not germane to this discussion due to physical challenges, and there was also the threat of certain neighborhoods being used as dumps for potentially toxic waste being dredged up from Boston's "Big Dig" construction projects. Since agents refused to disclose property addresses and insisted on being present at any visit, we had to endure a lot of "non-starter" pitches.

> Having to fire three agents after telling them what you want means
> something's really wrong somewhere.

I won't describe it as "wrong", but it was certainly counterproductive. The Agents I dismissed all assumed that they could show me multi-story houses after I'd said "Only one level" as clearly as possible, or that condos would interest me after I'd told them "No" in plain English, or that I'd be willing to live next to a pile of chromium. They lost the sale because they didn't listen.

> I don't think the problem was that you were excessively choosy; I think
> the problem was a lack of suitable houses, so the agents showed you
> "almost good enough" houses.

They showed us whatever they had, including one home where, when we asked about local stores, the sole occupant - a high school senior who was staying there until he graduated - told us that if we wanted a Coke we could just walk over to the prison!

> You had the resources and patience to go through all that. Many folks
> don't. If you spent just 1 hour per house on research, that's over
> 2-1/2 weeks work before the actual job of buying and moving begins.

It was more like six months: my wife and I were both holding down
full-time jobs, but we chose to dedicate the time and money to finding
a home that *WE* wanted, instead of something that a real-estate
agentdecided on.

>> Michael is right: the agent represents the *SELLER*, not the buyer.
>> He is legally obligated to disclose _some_ things, but professionally

>
> I disagree; they can be. But the main point is that the agent, whether
> a buyer's agent or a seller's agent, doesn't make any money until a
> sale happens.

The main point is that an agent doesn't really care if (s)he meets your
needs. (S)he gets paid to wear a buyer down until the trash heap next
to the Interstate starts to look good, and that's a damned shame, but
it's also capitalism in action. Real-estate agents *know* that they'll
only make a sale out of some small percentage of showings, but they
also know that that percentage is constant, and so they'll show you
everything they can get a commission on. If it's "your" house, they
win, and if it's not, they're that much closer to a sale. It's a tough
business, to be sure, but some agents allow it to dull their common
sense.

> and whose resources are usually less.

It's not the neighbors who matter: IMNSHO, home buyers don't care about
CC&R's unless and until a real-estate agent convinces them that such
things are important. CC&R's are put in place to protect *builders*,
not buyers, because the builder is afraid that someone will erect a
tower or construct an addition or drill for oil before all the lots of
a development are committed, and because builders are vain enough to
believe that their corporate identity is something that makes a
difference to home buyers.

For their part, real-estate agents like CC&R's because they assure a
consistent product that can be turned over repeatedly without the need
to worry about someone's aversion to whirligigs, antennas, lawn
ornaments, or pretty much anything else that a homeowner might add.
CC&R's save them time and trouble, and that means more profit.

CC&R's are like an automobile purchase contract that obligates the buyer to never repaint the car, never allow it to rust, never install custom headlights, never modify the interior, and never hang fuzzy dice from the mirror. They are contracts that benefit only those who are involved in the *transfer* of property, not in its use: if CC&R's benefit homeowners by maintaining the "value" of their land, they also cheapen people's lives by lessening the value of their community and by denying their children exposure to other ways of living and looking at the world.

I'm not sure the challenge _can_ be met "head on": as I've said before, in this and other forums, Ham Radio was popular when I was young because the government took extraordinary steps to encourage scientific education in the post-Sputnik years, feeling that we had to outpace the "red menace". That translated into lots of publicity for ham radio, a good amount of "free" equipment for those who participated in MARS, and preferential treatment during frequency-allocation hearings at a time when shortwaves were the _only_ means of international broadcasting.

During most of the Cold War, hams were a trained corps of radio operators who could be pressed into service quickly if needed: that's why the NTS is patterned after military nets, and why hams had to learn Morse long after it passed from commercial use. The Cold War is over: we won, and now the military thinks we're surplus.

Of course, it's more complicated now. We can, sometimes, help out during disasters, and even though some hams headed to Haiti in the wake of the earthquake found themselves getting shot at, in most cases our assistance is welcomed. We can, sometimes, provide a source of news and information to both public outlets and individuals during such events,

although American TV networks think nothing of bringing suitcase satellites into disaster areas. We can, sometimes, provide public exposure for ham radio, even if only by wearing a T-shirt with an ARES logo during field day.

Long story short: CC&R's are one symptom of a societal shift which is leading to less demand for all kinds of technical expertise, not just ham operators. American home buyers, fully aware that their futures and their horizons are being altered by international forces they can neither anticipate nor prepare for, are willing to shortchange each other and give up their right to modify their environment, in return for being able to keep anyone else from doing so. The "paradise" they are purchasing is a pale imitation of what it could be, but they'll settle for it never being less.

We must adapt or perish.

My 2¢. YMMV.

Ah, one of the few that truly understood the reasons for
Morse Code. (And the decided lack of it now.)

Since I'm an "old law" Extra, I think I'm entitled to say that the view from the top of Morse Mountain wasn't worth the climb. I like Morse "now and then", and I have a collection of old telegraph instruments, but I agree that it's no longer practical.

However, the question now is "how do we keep ourselves on the Pentagon's and the FCC's good side"?

>> American home buyers, fully aware that their futures and

I think the problem, in a nutshell, is that it may eventually become the only option. There's little vacant land to be had, and that means builders will be tearing down existing houses to make way for the next generation's McMansions, so even "old" areas will eventually come under CC&R restrictions.

The larger question is, as I've said before, "Do we matter anymore"? We're certainly not going to be drafted to pound brass alongside another soldier who is talking to the U.S. on a suitcase satellite while he faxes the daily readiness report, and we're not needed to maintain the broadcast industry's equipment, which is now so reliable that stations don't have to have a licensed engineer on the payroll. The trend, as in all walks of life, is toward the bottom of the educational barrel, with specialist such as we being relegated to

"maybe we'll call you" limbo at the same time automated test equipment makes our specialty obsolete.

So, what now? We've had this debate before, and I'll repeat my position: either we get a lot better at publicizing ourselves, and a lot better at being available in emergencies so that we have something to brag about, or we resign ourselves to a long decline.

One way is education: make people aware of the real long-term
ramifications of CC&Rs, HOAs, etc. Particularly when they take the form
of an unchangeable contract.

Such education takes time but it does make a difference in the longrun.

> American culture has changed a lot during

Good question! My guess is the late 1980s.

> The idea of "the perfect house" is
> much different now than 30-40 years ago.

What would you say has changed? What did it used to be, and what is
itnow?

> The public votes with its wallet.

But often it's not an informed vote. Look at how many people got
themselves into a financial disaster by buying too much house. They
didn't *plan* on that!

> suggests that the general public
> views them in a positive light.

I see two factors:

First, the general public often really doesn't understand what they're getting into. That's been proven time and again.

Second, in my limited experience, CC&Rs tend to *reduce* a home's price long-term. This mean a restricted house sells for less, making it seem a better deal.

But what then happens is the owners discover that, with the HOA fees, pages of rules and lack of flexibility, the place costs more overall.

﷿﷿There are
> many things in life that are neither easy nor ideal.
>
Of course we must know the system and how to work within it. We must also educate other hams; too many don't know the difference between a township ordinance, a deed restriction and an HOA rule.

But I think there's more that can be done. Legislation is one possibility. For example, when asked about extending the OTARD ruling to include ham radio antennas, the FCC essentially responded that hams should get Congress to instruct them to do it. IOW FCC won't do it onits own.

There are anti-restrictive-CC&R groups such as one that opposes no-clotheslines rules.

And there's the media. More than one person has been allowed to have their flagpole or religious display because the media made an issue ofit.

I disagree. International broadcasting via communications satellite began with Telstar, a decided commercial enterprise by AT&T before the full breakup of the alleged monopoly by the Bell System. I don't think this has any bearing on antenna restrictions on homes. Home selling is a decided commercial enterprise.

The "40m fight" between amateurs and SWBC wasn't settled during WARC-79 and had to wait until WRC-03 to be resolved. That's a mere 24 years, part of the time during the "Cold War."

Military commsats didn't exist until after Project Score proved it could be done. All through the Korean War active phase (1950-1953), US Army station ADA relayed about 9 million messages total on HFalone.

>During most of the Cold War, hams were a trained corps of radio

>we won, and now the military thinks we're surplus.

Amateur radio was considered "surplus" before 1960 by the US military. I know this by being IN the US Army Signal Corps 1952-1960. As an example, I reference the following excellent work by Walter Elkins on Signal Corps units and locations of the US Army Europe (USAREUR) from 1945 to 1989:

http://usarmygermany.com/Units/Signal/USAREUR_SignalCorps.htm

The "Cold War" began about 1948 with the blockade of Berlin. The "Cold War WITH the USSR" ended after the First Gulf War when the Soviet Union dissolved itself. We now have another kind of "cold war" with terrorists which was highlighted by the suicide flyer-kidnappers of 11 September 2001.

As another reference there is the June 1996 history of the US Army Signal Corps called "Getting The Message Through" (unofficial motto of the Signal Corps. Free download is available from:

www.history.army.mil/books/30-17/front.htm

That is from the US Army Center for Military History.

For more on early USA radio history, including amateurs, see:

http://earlyradiohistory.us

>Long story short: CC&R's are one symptom of a societal shift which is

I just can't tie together all those separate subjects (Cold Wars, OOK CW, alleged technical ignorance with personal antennas at homes.

What I mean is that, in a CC&R/HOA situation, if there exists even one neighbor who knows all the fine print and takes an interest, that neighbor can make all sorts of problems for you over even minorviolations.

> CC&R's are put in place to protect *builders*,

All true, and more. I've read that builders can sometimes get better deals from lenders by inserting CC&Rs, and that anti-antenna CC&Rs came from deals with cable-TV companies.

> For their part, real-estate agents like CC&R's because they assure a

I have found that at least some agents don't pay any attention to CC&Rs unless the buyer makes a big deal about them.

> CC&R's are like an automobile purchase contract that obligates the
> buyer to never repaint the car, never allow it to rust, never install

I've said something very similar in the past. I included always having to bring the car back to a dealer for service.

> They are contracts that benefit only those who are

> the world.

WELL SAID!

Not only that, but they can inhibit the development of real "community values" by installing artificial ones.

For example, in my neighborhood, the homes were built soon after WW2 and were all practically identical small frame houses. They were almost the classic little-boxes except that they were all paintedwhite.

Then somebody got the idea to add a front porch. To 1950s architects, front porches were "old-fashioned" and "not in keeping with the modern lifestyle". But someone put one on anyway, and liked it. Pretty soon other folks did the same. Some folks did wrap-around porches that required variances, and the neighbors came out in support of the variances - even those who had no porches. Other additions and

variations followed until now no two houses are identical or even that
much alike. And property values are quite good.

Had there been the kind of CC&Rs that are common today, none of that
would have happened.

Sputnik went up in October 1957, and I agree that it had an effect.

But the popularity of ham radio in the USA was increasing long before
Sputnik. For example, in the 1930s, the number of US hams almost
tripled, from less than 20,000 in 1929 to over 46,000 by 1936. After
WW2, the growth continued, and really took off after the Novice license
was created in 1951.

OTOH, from 1960 to 1970, the number of US hams grew very slowly, and
actually declined in some years.

NTS dates from before the Cold War, and the idea of a trained corps of
radio operators was proven to be valid in both World Wars.

As for Morse passing from commercial use, that didn't happen until the
1990s. The real reasons the Morse Code tests continued until a few
years ago are more complex.

First, there was the international treaty. Until 2003, it required
Morse Code tests for all amateur licenses granting privileges below a
certain frequency. In 1947 that frequency was 1000 MHz, and over the
next couple of decades it was lowered to 30 MHz in a couple of steps.
But until 2003 the FCC's hands were tied because of the treaty.

Second, there was the amateur community's opposition. In 1975 the FCC proposed a VHF/UHF only nocodetest amateur license, and the reaction in the comments was an overwhelming "NO!". In 1983 FCC tried again, and again the reaction was "NO!". In 1991 the FCC did it anyway.

All of which are good things.

We can also promote the idea of "radio for its own sake". Many people do things just for fun, even if they aren't "easy" or "modern". Ask any backpacker or marathoner.

> Long story short: CC&R's are one symptom of a societal shift which is

I think it's a lot simpler: Many people don't think about them that much, or even know they exist in many cases.

> We must adapt or perish.
>
Agreed!

But we must not lose the core values either.

Or sailor. I think that this is the future of amateur radio. There aren't huge numbers of backpackers, marathoners, or sailors, but there are enough to fuel the interest in the avocation. This is where ham radio is headed. I don't know how many hams it will take to maintain the critical mass, and I hope that we don't fall below that number as the exit rate from the hobby eclipses the entry rate into it.

> I think it's a lot simpler: Many people don't think about them [CCRs] that
> much, or even know they exist in many cases.

I agree. Over-analysis of the issue sheds little light on how to fight the fact that CCRs exist. For the majority of the population, they're simply not an issue and we're unlikely to raise awareness enough to change that. Even if we did, most folks' reaction would be that CCRs are a wonderful thing because they see only the benefits and not the more subtle side effects.

Discussion of US Amateur Radio license requirements elsewhere got me thinking that a discussion of the whole subject might be interesting. For me, the place to start is the historical beginnings.

The following is my take on events with respect to US Amateur Radio.

Before 1912, there was very little regulation of radio by the US government. The whole technology was so new and revolutionary that it took a while for the need of regulation to become apparent. Various bills were introuced before Congress but not much changed until the Titanic disaster showed the need for better regulation in several areas. Since the main commercial use of radio at the time was for maritime communications, the effects of that tragedy were widespread.

After 1912, the Federal government took a very active role in the regulation of radio. Their solution was licensing of both operators and of stations, regulations establishing different radio services and enforcing technical/operating standards, and the issuance of callsigns to positively identify transmitting starions. Those in charge knew, understood and supported the concept of the skilled, knowledgeable, licensed Radio Operator in all radio services.

In some services the required skills and knowledge would be mostly technical, in others they would be mostly operational, and in most a mixture of operational and technical, but in all cases the licensed Radio Operator was indispensable.

Thus there were Amateur licenses, Commercial Radiotelephone licenses and Commercial Radiotelegraph licenses. There were station licenses and operator licenses. There were several operator license classes, serious test requirements. As technology developed, and a whole flock of endorsements for things like radar were created.

Some of this did not come easily. During the 1920s there was a considerable amount of debate over which government level and agency should regulate radio, and how new technologies such as broadcasting, which was unknown in 1912, should be handled. There was also the evolution of world radio treaties to set up standards betweennations.

Through all this the concept of Amateur Radio evolved, in large part due to the efforts of those such as H.P. Maxim, Charles Stewart, K.B. Warner and many others, They faced considerable opposition, because there were many who would have liked Radio to be a strictly commercial or government technology.

For example, the 1912 regulations limited amateurs to 1000 watts input and waves no longer than 200 meters, and required licensing of all

transmitting stations and all operators. Many simply left the air because they felt the new rules were too restrictive, but others pressed on to see what could be done.

One may wonder why the regulations didn't just outlaw amateur radio entirely. I think there were three reasons:

First were the efforts of Maxim and the others, testifying before Congress and committees as to the need for Amateur Radio.

Second was the general feeling during the Progressive Era that the average person should have at least some access to radio transmitting.

Third was the widely-held idea that the low power of 1 kW and the short waves below 200 meters were essentially useless for commercial purposes, so why not banish the amateurs to them?

A similar situation developed after WW1 ended, and again it took a considerable effort to get amateurs back on the air. One added factor in 1919 was that thousands of amateurs had proved the worth of their self-training in radio during the war.

Efforts to secure the place of Amateur Radio in the regulations continued through the 1920s, culminating with the 1927 treaty regulations that recognized Amateur Radio as a separate and distinct radio service, with its own bands and rules guaranteed by treaty as well as national laws.

Licensing of all radio transmitters and operators had some far-reaching effects. For example, licensing of commercial operators created not only a lot of jobs but a whole profession. Every radio service needed licensed Radio Operators of various levels for various tasks. Whether it was routine transmitter checks at a daytime-only AM BC station, running a vital maritime shore station, or any of dozens of other jobs, the licensed Radio Operator was an absolute necessity, by law. And these became pretty good jobs, with decent pay andbenefits.

Someone could have a Ph.D. in EE, the Nobel Prize in physics, years of military radio experience, etc., etc., but without the proper License they were not a Radio Operator and could not legally do any of the Radio Operator's jobs.

Amateur Radio was often the first step in the licensing process of commercial operators, though not all commercial operators started outas hams.

The end result was that for several decades a commercial license of the right type, plus a high-school-equivalent education and a clean record, were practically a Golden Ticket to a decent-paying career.

This doesn't mean all the jobs or the licenses were easy to do or get, nor that a Radio Operator didn't have to know his/her stuff. Just that it was a way for folks who knew something about Radio to get a decent living without a college degree and without low-priced competition,

both domestic and "offshore".

At the same time, none of the licenses, commercial or amateur, required anything close to the knowledge of an four-year EE degree. Nor were they meant to.

Even the military followed suit. For example the US Navy had various classes of Radioman, each requiring a considerable amount of training, experience, and proof of skills and knowledge.

Another result of all this licensing was that the government didn't really have to do all that much enforcement. Licensing produced a culture where respect for and compliance with the regulations was taken very seriously, and nobody, commercial or amateur, wanted to risk the loss of an operator or station license. They were too hard to get in the first place, and even more difficult to replace if revoked.

It was a pretty good system - maybe too good.

The problem was that the Captains of Industry didn't like paying for all those licensed Radio Operators, nor their benefits, for what seemed to them to be simple, easy jobs. Unionized or not, the License requirements meant the Captains couldn't hire just anybody for the jobs, nor could they combine certain jobs to reduce the head count, nor could they neglect doing certain things to reduce expenses. Nor could they export the work.

So the Captains of Industry got the regulators, and the regulations,changed.

Over a number of years they succeeded in all but eliminating the concept of the skilled, knowledgeable, *licensed* Radio Operator. Saved lots of money and aggravation. All we have left now are pieces of the old rules and requirements.

Some might say that the new technologies no longer required specialized Radio Operators, and in some cases that's probably true. But I think the dismantling of commercial Radio Operator licensing was more about the deregulation for the sake of bigger profits rather than the lack of need for operators.

And since they did it for commercial services, the same concepts were applied to the Amateur Radio Service. But the Amateur Radio Service is still all about the technically knowledgeable, operationally skilled Radio Operator.

Or at least I think it should be.

Any game difference is due to the lack of sales, due to a depressed
market.

I had the same experience here. At the time we bought, the market was
in a lull between full sped ahead, but it was still better than now.
The real estate agents were very aggressive, and you were bomabarded
with houses that were either not applicable or overpriced. The three I
went through all had the same tactic. They find out how much the
```

maximum is that the bank will lend you, and then the least expensive house they show you is at the very top, but most will be significantly over. Then what you are supposed to do is to figure out how to finagle that extra amount, usually by taking out another back door loan. One of them actually called me stupid because I refused to pay more than 66 percent of the maximum amount the bank would loan. They had a system, and I wasn't playing the right way.

> All true, and more. I've read that builders can sometimes get better

You hit the nail square on the head there, Jim. When these things started, I doubt that anyone had the idea of discriminating against Hams. We were just collateral damage in the same way that we get inadvertently get involved in anti-cell phone while driving legislation.

>
> I have found that at least some agents don't pay any attention to CC&Rs
> unless the buyer makes a big deal about them.

Right, and in most cases people who are interested are interested in more restrictions rather than less. There is a type in this world who is upset by anything out of place, by their view of the back yard being marred by the neighbors clothes drying on the line, or even the style of their house once upon a time, they would be consigned to the eccentric grouch down the road, yelling at the neighborhood kids to get off their lawn, but now they live in neighborhoods where they rule.

> We can also promote the idea of "radio for its own sake". Many people
> do things just for fun, even if they aren't "easy" or "modern". Ask any
> backpacker or marathoner.

Again, there is something that is very important, and seems to get ignored by so many.

I really enjoy being involved with just about all aspects of Amateur radio, but too many people tend to think that their own interested are the ARS's main focus. Contesting, Emergency work, favorite modes. It's all good.

But my main personal interest is radio for it's own sake. I build as much as I can, and enjoy making those little pieces of electronic "stuff" do things for me. 8^) The radios themselves have progressed beyond what is practical for me to build mostly - though practicality hasn't stopped me yet, but peripheral construction, system building,

and the odd retro project now and then. Yeah, that's cooking with gas!

Oy! That is *exactly* the reason why I will not live in a neighborhood like that. I just have to imagine that the stress put on a family by having an unusual neighbor like that, has to be much more than any stress from researching, finding and living in a neighborhood where they don't have intrusive restrictions that neighbors can sue you for.

What is amazing to me is that the unusual neighbor is engaging in stalking behavior, which apparently puts him on the "right side" in this development. So completely backwards. What's more, the guy is winning, the family he is stalking and harassing and suing is moving away.

In my presumably less proper neighborhood, the police would be visiting the fellow, and educating him on the wisdom of not stalking people.

It's all a balancing act. My HF dipole, VHF/UHF Jpole, and HF6V are put up as unobtrusively as possible. I've not tried to hide any of them either though, which harkens back to Jeff's original post here. I've spoken with the neighbors and explained about Ham radio. I do admit that I've emphasized the emergency aspect, which is just a whole lot easier to explain to folks, and mentioned that if they get interference to let me know. They've all been cool with it, though they like to come out and chuckle at the gyrations when I replace an antenna.

Side note that was part of a learning process for me: Years ago, we lived in a townhouse for a couple years. The neighbor lady was a real pain. Anything she could do to make trouble, she did. This included calling the fire company during a cookout. Double Oy! Finally, in an effort to calm things down, we asked her over to share a meal. Problem solved! While I'll not say she wasn't unusual, all she really wanted was for the neighbors to have some sort of socialization with her. Turns out she is an accomplished children's book writer, and has a wicked sense of humor.

I guess the moral of the story as far as I'm concerned is do your research, know your neighbors, and communicate with them about your Hamness. Some times people call me lucky in all this. I think we make our luck.

With all due respect . . . all neighborhoods are like that.

Yes, there certainly are developments that pride themselves on the enforcement of their rules, with people out there measuring the height of your daffodils to be sure they're within the specifications that the homeowners association has established.

But I've seen petty neighbor squabbles out in the country. It has a lot more to do with personality clashes between individuals than it does with CCRs. CCRs may make it easier, and they may be a marker that it's more likely, but it can happen anywhere.

You're right. But luck is there, all the same. You could have an unreasonable neighbor who didn't respond to your doing all the right things. If that happened, you would be in a world of hurt with very little recourse.

Why do you think so many horror movies have the word "Neighbor" in
thetitle?

Bill, W1AC

Ham radio relevance: I had a knock down, drag out boundary fight with
my neighbor after I hired a surveyor to stake my land for a tower. It
turned out that my "neighbor" had his fence 16 feet onto my land.

Trust me: *NEVER* buy the title insurance the bank demands. Get your
ownpolicy!

No problem guys, let's just say that I am incredibly lucky.

Then again, some of us may have some part in manufacturing our own luck.Can I say for sure that I'll never have neighbors that accept my Ham radio avocation? Not 100 percent. On the one side of our house is a high-end rental. But we're friends with the landlord, and she makes sure the prospective renters know I'm a Ham. But catch this, if there's a big problem, the renters will go. That probably sounds strange, but it's a networking issue. The XYL was involved in the landlord getting and remodeling the place, and we watch over it for her.

BTW, I had my lot surveyed before buying and I hired a lawyer to do my own title search - although I still had to buy the insurance -no choice. The insurance cleared, and the lawyer found some problems. Saved me about 5K for a couple hundred paid to him.

This part of the history touches upon a issue that I think fits under the "law of unintended consequenses."

I came into Amateur radio as a digital guy who wanted to learn about radio This may give me a different perspective.. A lot of Hams, especially those who have been Hams for a long time, seem to inadvertently downplay just what knowledge is needed to be an effective communicator in wireless. You see this in their comments about some supposed ease in getting a license, among others. I'm here to tell you that the art and science of making a communications link between randomly "chosen" areas, and all the electronics that that entails, is a matter that takes some serious education and/or experience.

Yet time after time, the systems that we come up with just fail. And the problem is always that the best laid plans to take the skilled operator out of the link fail. The reason is pretty simple. The effort to remove the decisions that an educated operator would make add infrastructure to the system. When the wheels com off, the infrastructure fails. The same forces that destroy, flood, and freeze the victims of disaster also have an effect on the infrastructure that is in place to rescue them.

On the commercial radio operator demise part, I'd have to say that you want to listen in my area to hear the results. One company owns all the radio stations in my area, with the exception of the Public station.. The only one I bother to listen to other than the Public station is the local ESPN sports station. They regularly go off the air for long periods of time, play the satellite feed message, or my favorite, play two feeds at once. The funny thing is that the most listened to station in the area is guess who, the public station. They still have engineers, they still monitor their output, and they actually take input from their listeners.

That deregulation, that getting rid of skilled employees, did it work when we have 8 or 9 stations that are horribly undependable, and most everyone, even people who hate to admit it, listen to the public radio station?

Agreed - it most certainly can, and does, happen in places
withoutCC&Rs.

The thing about CC&Rs is that, IMHO, they make such things more
likelyand easier.

Depends on the situation. Yes, a bad neighbor can make life miserable
in almost any situation. But CC&Rs can make it easier for the bad

neighbor to do it, and do it *legally*.

I think it's very important for hams to be good neighbors, with or without CCRs, HOAs, etc. I think part of that is being knowledgeable about some of the issues.

I've known hams (and others) who loudly expressed the idea that it was THEIR property and they could whatever they wanted with it. These folks expressed disdain for building codes, zoning ordinances, etc. Problem is, even a non-attorney like me knows that it doesn't work that way. For example, if a neighbor violates building safety codes in such a way as to create a fire hazard, my property is at risk, and I have a legitimate interest in getting the codes enforced. Same for things like flooding. When an amateur disregards such concepts, it makes us look bad.

Which goes back to what I said originally:
> Do we all have to act like having an FCC grant (license)
> somehow makes us above the law?

Back when I was living in Culver City, I'd put a pair of
push up masts at opposite ends of the house to string a
multi-band dipole between. About 5' above the crest line
of the house. Just the poles, I hadn't put the dipole up
yet.

My neighbor's wife called in tears, "I can see that pole
from every window of my house."

Later that evening her husband called and threatened me
with all sorts of law suits etc. etc. I suggested that if
his view was ruined he should consider moving to an area
with CC&Rs. Of course, the down side would be their new
neighbors would have their yappy dogs put to sleep.

I didn't hear another word out of him for 6 months.

Although he did show his displeasure by refusing to trim
the ivy on his fence for a whole year. Until the city made
him cut it back.

I don't think that's just a long-time-ham thing.

> You see this in their comments
> about some supposed ease in getting a license, among others.

I think there's a big difference between what it takes to get a USA amateur license and what it takes to be an effective communicator, even if we're just talking about Amateur Radio. The license tests are just the beginning; there's a lot of practical stuff not on the license tests.

> I'm here
> to tell you that the art and science of making

> experience.

I think that depends on what resources are available and what the actual conditions and communications needs are.

For example, with modern satellite communications, a news team can be flown into a disaster area (such as Haiti) and get an on-the-spot report out of the disaster area in short order. Getting communication from specific people in the disaster area to others inside or outside the disaster area is a completely different thing.

Some folks may not consider "health and welfare" messages to be of vital importance, but when you have loved ones in the disaster area and haven't heard from them in days, a simple "We're OK!" message ispriceless.

Plus what is seen on TV isn't always an accurate picture. On another forum I read about the devastation of Hurricane Ike being only just behind Hurricane Katrina in dollars. But Katrina got far more media play than Ike, over a much longer time. And the Katrina coverage focused on New Orleans even though the Mississippi coastline was harder hit. (This isn't a claim of bias or wrongdoing; reporters can't be evenly distributed everywhere. But it is reason to take TV reports with a grain of salt).

As Commander Montgomery Scott used to say: "The more complicated you make the plumbing, the easier it is to stop up the drain". Or similar.

The problem is cost; the skilled operator costs more resources than the equipment that replaces him/her. And as the availability (in the technical sense) of the equipment improves, the apparent need for operators goes down.

> On the commercial radio operator demise part, I'd have

> station..

To diverge for a moment, that's another example of the government taking a hands-off approach when formerly they had been active in regulation.

It used to be that there were all kinds of limits on how many broadcast stations the same corporate entity could own in a given market. The idea was that no market should be dominated, let alone monopolized, by a single network or company. This idea and the regulations to enforce it were in place for decades, but a few years ago were quietly tossed aside, resulting in what you have in your area.

AM or FM?

> The funny thing is that the most
> listened to station in the area is guess who, the public station.

Not unusual - market forces at work... Here in Philly we have at least two: WHYY and WXPN

> They
> still have engineers, they still monitor their output, and they

> everyone, even people who hate to admit it, listen to the public
> radio station?

Depends on how you define "did it work". From a pure profit standpoint, all that matters is the return on investment. To the station's owners, the additional cost of improving the availability of the signal and the content of the programming may not result in enough of an increased return (of cash).

But the public station measures "return on investment" differently.

I think Amateur Radio does, too.

And my point was that *some* hams think that way. Not all. And it's not about the license grant.

What I think is the really bad part is that such comments display an ignorance of the law which weakens their case. Yes, state and local governments cannot regulate radio the way FCC does. No, that does not mean an amateur has carte blanche when it comes to antennas.

> Back when I was living in Culver City, I'd put a pair of

Well, I must be lucky, because around here the neighbors ask if theycan help. Shovel each others walks and driveways when it snows, mow each other'slawns when on vacation. Many of the homes share driveways; one pair of families I know put basketball hoops on both sides so the kids

can play full court.

Some houses have TV antennas, ranging from relics of the 1950s to those little dishes. I have a mast and 80/40/20 inverted V with the center at 40 feet. Some people garden extensively, some play music, some are constantly upgrading their properties, somehang out on their front porches whenever weather permits. Nobody gets upset aboutany of it.

On Halloween I can count on at least 100 kids showing up for trick or treat. Then there are the Christmas displays..

Two summers ago the neighbor across the street had a tie-dye party on the front lawn. It was a blast.

You can't force that sort of stuff by regulation. We lend each other tools and give away surplus materials. (Neighbor'scomputer monitor failed, I went up to the attic and gave him one of myspares...)

CC&Rs? What are they?

To me, that is a confusing paragraph. As far as I've seen in more urban areas, the "infrastructure" survives quite well and has been proven to do so in some very serious events. That takes planning by "skilled, knowledgeable" managers. I'm talking about the telephone infrastructure, the public safety infrastructure, and even the broadcast infrastructure. If an emergency is totally catastrophic to eliminate some "infrastructure," it will also eliminate the amateur as a potential savior.

I've seen, over TV, some rather catastrophic emergencies, brought to everyone by the news media of several networks, including showing in the background the communications vehicles and equipment of various National Guard units (source: flooding of rivers beginning in the Dakotas). Add to that the First Gulf War bombing in Iraq done by a CNN news team, none identified as amateur licensees.

There has been a significant improvement in 'radio' technology that does not require the old-style "skill and knowledge" alluded to by the first thread author. For example, during that First Gulf War bombing, voices of the journalists were coming over the Iraqi telephone infrastructure. When that was damaged during the bombing they continued on via satellite using equipment they had with them. Saddam Hussein was even interviewed live by one of the CNN journalists during that bombing.

By the way, the first thread author's text may be viewed almost verbatim on e-ham.net Forums, Licensing, under "A Modest Proposal" dated 31 January 2010. My reply to him follows there but there was no counterpoint to my reply. <shrug>

Its a matter of system complexity. The more complex the structure, the
more likely the failure.

In our area, we have a 10 year old system that doesn't work under
normal conditions, much less emergency ones They are trying to replace
it now, but we spent a whole lot of money and got very little for it.
It was touted as a great thing when it was installed. And it wasn't
inexpensive or put together

> I've seen, over TV, some rather catastrophic emergencies, brought to

> news team, none identified as amateur licensees.

Most very respectfully Len, I now understand the confusion.

The amateurs are not there to provide news via satellite, or to do
television shows. We're not part of public safety or broadcast
stations.

We're there to pass along communications behind the scene.

Where this shows up is in the how of our work. It isn't glamorous, to be sure. But in most cases, a satellite reporter from some disaster scene is going to be there to give a news report. Not so likely a request for say, shovels and toilet paper. It's all part of post disaster work.

Broadcast stations are in a similar state. Their part is more likely to give people info about avoiding the areas in question, or evacuation routes to follow. Amateurs wouldn't be doing that, because there isn't a receiving end. Most everyone has a Television and a AM/FM radio. Not so many have a 2 meter radio.

So the typical placement might be as such:

Some place has an emergency, let's say a modern day version of the New Madrid earthquake.

We'll likely be looking at some different teams heading into the area. There will be lots of first responders, like National guard, firefighters, Medical personnel, and the like. There will probably be some Hams also. News teams will be there.

Each group will be doing it's thing. The Hams will likely be passing along messages for the sort of thing I mentioned above, another part will be getting messages to the outside world about "We're still around". It's possible that the cell system functioned perfectly in your area, but typically the post disaster scenario has been one in which everyone is calling to see if their relatives are doing okay. If the cell towers still have electricity, they get clogged quickly, if they don't, their backup systems go down after a while. While we may communicate via cell if it is working, I don't know of anyone who has cell phones in their disaster comm plans.

So anyhow, I think you might be mistaking other groups issues, like the broadcasting and newscasting industries with the job of setting up radio stations and passing along messages for health and welfare. Hams aren't usually on the front lines, they're just performing a part in the process.

And yes, a large part of why they are doing it is both that the infrastructure that might be used otherwise fails, and that while it might look effortless, there is knowledge that ends up being a big help in getting the message through that has been lost by the idea that the communicator only need to know how to talk, and that technology can fill in for the missing knowledge.

==> PUBLIC SERVICE : ILLINOIS TEAMS WITH AMATEUR RADIO OPERATORS TO
CREATE RACES PROGRAM

A newly forged partnership between Amateur Radio operators
throughout the state of Illinois and the Illinois Emergency Management
Agency (IEMA) will provide an additional layer of emergency
communications during disasters. The agreement creates the State Radio
Amateur Civil Emergency Services (RACES) program. Under the agreement,
IEMA Director Andrew Velasquez appointed ARRL Illinois Section
Emergency Coordinator Brad Pioveson, W9FX, of Benton as the volunteer
State RACES Officer. Pioveson will serve as the single point of contact
between IEMA and the Illinois Amateur Radio community. Read more here
<http://www.arrl.org/news/stories/2010/02/02/11321/?nc=1>.

==> PUBLIC SERVICE: MARS UNIFIES OPERATION IN SUPPORT OF HAITI RELIEF
EFFORT

To assist the MARS communications support effort in Haiti, the heads
of the Army, Air Force, and Navy-Marine Corps MARS programs have agreed
to divvy up responsibilities among the three Service MARS programs.
According to Air Force MARS Public Information Officer David
```

Trachtenberg, N4WWL/AFA3TR, this delegation of responsibility will facilitate more efficient utilization of MARS communications assets in the overall relief operation. On January 12, a 7.0 earthquake struck Haiti, killing thousands and wiped out the island nation's communication infrastructure. Read more here <http://www.arrl.org/news/stories/2010/02/03/11326/?nc=1>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> COMING UP IN QST : LOOK FOR THE MARCH ISSUE OF QST TO ARRIVE SOON!

The March issue of QST -- our annual antenna issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting to a plethora of antennas and antenna projects, the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest articles -- including a new operating event for newly licensed hams -- as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/02/02/11324/?nc=1> to discover what's in store for you in the March issue of QST, the official journal of the ARRL .

==> LICENSING NEWS: NCVEC RELEASES REVISED TECHNICIAN QUESTION POOL

In January, the Question Pool Committee (QPC <http://www.ncvec.org/page.php?id=333>) of the National Conference of Volunteer Examiner Coordinators (NCVEC <http://www.ncvec.org/>) released <http://www.arrl.org/?artid=9368> the 2010 Technician (Element 2) Question Pool. Upon further review of the pool, members of the QPC found and corrected more than 50 minor typographical errors and clarified the questions and answers, making them easier to understand. These adopted changes are now incorporated in a revised question pool. Read more here <http://www.arrl.org/?artid=9415>.

==> ARRL IN ACTION : WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including planning for the League's future at the 2010 Annual Meeting of the ARRL Board of Directors, preparing for WRC-12, investigating interference, providing equipment for

communications support in Haiti through the ARRL's Ham Aid program and more. This installment covers the month of January. Read more here <http://www.arrl.org/news/features/2010/02/01/11320/?nc=1>.

==> ARRL RECOGNIZES: FORMER ARRL PRESIDENT NAMED QCWA PRESIDENT EMERITUS

Harry Dannals, W2HD -- who led the ARRL as President from 1972-1982 and was named ARRL President Emeritus in 1984 <http://www.arrl.org/honoraries.html> -- has been named President Emeritus of the Quarter Century Wireless Association (QCWA <http://www.qcwa.org/>). Dannals also served as President of QCWA from 1989-1994; he is the only person to ever serve as President to both organizations. In addition to his work with the QCWA and ARRL, Dannals is a Fellow in the Radio Club of America (RCA <http://www.radioclubofamerica.org/>), a member of the Society of Wireless Pioneers (SOWP <http://www.sowp.org/>), the Old Old Timers Club (OOTC <http://www.ootc.us/>) and the Veteran Wireless Operators Association (VWOA <http://www.vwoa.org/>). In 2002, he was inducted into the CQ Magazine Amateur Radio Hall of Fame <http://www.arrl.org/news/stories/2002/05/31/102/>. "I was pleased to learn that the QCWA's leadership has conferred upon Harry Dannals this very well-deserved accolade," said ARRL President Kay Craigie, N3KN. "As the only person to have served as President of the ARRL and the QCWA, he is unique among amateurs."

==> FCC NEWS : FCC NOTES AMATEUR RADIO RESPONSE TO HAITIAN EARTHQUAKE

In a posting on January 28 to the FCC's blog <http://reboot.fcc.gov/blog/>, Mindel DeLaTorre -- the Commission's International Bureau Chief -- noted how Amateur Radio operators are assisting with communications support in earthquake ravaged Haiti. "The amateur radio community is also contributing to the relief efforts," she wrote. "In the aftermath of the earthquake, the amateur radio community in Haiti, the Dominican Republic and elsewhere has dedicated equipment and spectrum resources to the relief efforts." DeLaTorre reiterated that those who want to assist in the relief effort must go through the proper channels <http://www.arrl.org/?artid=9397>: "For anyone wanting to help, to protect against harmful interference, it is important to go through the Haitian government before any radio equipment or spectrum resources are used in Haiti."

==> ARRL RECOGNIZES: PHIL SALAS, AD5X, WINS JANUARY QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for January is Phil Salas, AD5X, for his article "160 and 80 Meter Matching Network for Your 43 Foot Vertical -- Part 2." Congratulations Phil! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your

favorite article in the February issue by Sunday, February 28.
<http://www.arrl.org/members-only/QSTvote.html>

==> SOLAR UPDATE

Tad "Sun and moon but set to rise
<http://www.robertburns.org/works/483.shtml>" Cook, K7RA, reports: As soon as sunspot 1041 went over the horizon at the end of January, sunspot 1043 emerged, high in our Sun's northern hemisphere. The average daily sunspot number this week fell more than 13 points to 14.6; the average daily solar flux declined nearly 7 points to 75. Geomagnetic activity was up, and the average daily planetary A index rose 2 points to 5.1. The average daily sunspot number for January was 21.3, and the 3-month trailing average -- centered on December -- was approximately 15.2. Like last month, the average for the month greater than the 3-month average centered on the previous month is a good trend. The difference between the monthly average sunspot number and the trailing 3-month average has been positive since September. The difference for November, December and January was 0.6, 5.5 and 6.2. For 2009, the 3-month average centered on January through December (resolved to two digits beyond the decimal point) was 2.19, 2.02, 1.49, 2.01, 4.23, 5.2, 4, 4, 4.64, 7.1, 10.16 and 15.15. The predicted planetary A index for February 4-9 is 5, 5, 8, 10, 10 and 5. The predicted solar flux for those same days is 78, 80, 82, 85, 88 and 90. Look for more information in the Solar Update -- including news on 6 meter openings, and a piece from Carl Luetzelschwab, K9LA, about an auroral oval image -- on the ARRL Web site on Friday, February 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Robert Burns' Inconsistency in Love
<http://www.robertburns.org/works/483.shtml>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=K9Zev5gr9is> This week, there is a running of the NCCC Sprint Ladder on February 5. Look for the FYBO Winter QRP Sprint, the Minnesota QSO Party and the AGCW Straight Key Party on February 6. The Vermont QSO Party, the YL-ISSB QSO Party (CW), the 10-10 International Winter Contest (SSB), the British Columbia QSO Party, the Delaware QSO Party and the Mexico RTTY International Contest are February 6-7. On February 7, check out the North American Sprint (CW) and the ARCI Fireside SSB Sprint. The New Mexico QSO Party is February 8. The ARRL School Club Roundup <http://www.arrl.org/SCR/> is February 8-12. The NAQCC Straight Key/Bug Sprint is February 10 and the CWops Mini-CWT Test is February 10-11. Next week, the NCCC Sprint Ladder is February 12. The YLRL YL-OM Contest is February 12-14 and the FISTS Winter Sprint is February 13. On February 13-14, be sure to check out the CQWW RTTY WPX Contest, the KCJ Topband Contest, the Louisiana QSO Party and the OMISS QSO Party. The North American Sprint (SSB) and the SKCC Weekend Sprint are both February 14. The Classic Exchange

(Phone) is February 15 and the AGCW Semi-Automatic Key Evening is February 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

I think you've come to the nub of the problem: I resent the notion that the Federal government would apply Force Majeure to override CC&R clauses forbidding TV antennas, but leave restrictions in place for Amateur Radio skyhooks.

To be sure, there's a value judgement involved: the FCC had to decide that the "value" of television outweighs that of preventing individuals from having to suffer something they consider to be an eyesore. I, on the other hand, think that my antennas deserve as much consideration as a satellite dish, no matter what the content they help to convey.

It's an AM station.

>From what I can gather, the post-regulation version of radio stations
is that you apply the notion of mass production to the issue. In this

method, you buy up as many stations as possible, and minimally staff them. Then instead of locally produced content, you have satellite feeds. Advertisement then is mostly national type stuff - I think that's picked up from satellite also. I've heard Canadian public service announcements on our local stations. On our local sports station, there is maybe 15 percent local advertisements, and 1 semi locally produced show.

It's been an unexpected boon for the public station. These local places still need to advertise, so they are throwing money at the public station. Then they get a mention, a thanks, and it turns out that the public radio listeners will support these businesses and let them know why. The great irony is that when the NPR was largely removed from the public dole, it was done with the intention that it would kill public radio. Now after all these years, commercial radio is in the pits, and people are supporting public radio directly.

Back on topic, I'm firmly convinced that Amateur radio will serve as a sort of an island for technically inclined people, while we sort our way through this time of celebrity as role model, and the reality tv mode that so many people seem to be in thrall to. We now celebrate the mundane. I'm more interested in the exceptional, and I try to show as many people as I know that to be technical is not a bad thing. That's why I let everyone know that the hockey playing, loud motorcycle driving guy is also full of that geeky goodness. There is an alternative.

Ah, but you _CAN_ hear all the "undependable" stations, right? Are they still able to play whatever they choose, free from interference caused by other stations?

By brother, W3TDH, is fond of saying that "The government's job is to protect you from your neighbor's folly, not your own." So long as each station is within it's assigned channel and producing acceptable signals, the rest is a commercial matter that the public will decide indue course.

This _IS_ related to Amateur Radio: if my neighbor complains of RFI, and I'm sure that my station isn't at fault, I get to tell him to buy better equipment. I'd always do what I could to eliminate the problem first, by recommending filters, etc., but in the end the government protects _me_ from my _neighbor's_ folly when he bought cheap carp at a discount.

>a satellite dish, no matter what the content they help to convey.

I don't believe that the value judgement was on the part of the FCC. As
I recall, its origin was the United States Congress.

http://www.fcc.gov/mb/facts/otard.html

The FCC simply did as they were told, and implemented regulations which
enforce the intent of Section 207 of the Telecommunications Actof 1996.

The FCC has repeatedly been asked to expand the OTARD rules to cover
amateur radio antennas. They have repeatedly responded that they don't
feel that they can re-interpret Federal law to do so... it would go
well beyond the wording and intent of the cited law.

If Congress chooses to change the law (or pass a new one) and give the
FCC the explicit authority to override CC&Rs with regard to amateur
radio antennas, then I have little doubt that the FCC would once again
do as they were told, and enact new regulations.

Unless and until Congress acts in this way, the FCC is very unlikely to
change the regs... because, I suspect, they're pretty sure that if they
did so, somebody would take them to court for misinterpreting the law,
and the FCC would probably lose.

If you want OTARD expanded to include an exemption for amateur radio
antennas, write your Congress-critter. There have been bills
introduced several times in the past few years, to do just this... and
they've all died for lack of support.

All true.

There's also the fact that Amateur Radio emergency communication really is "When All Else Fails".

What I mean is that if I see a situation on the road which requires police, fire and/or ambulance help, I'll first try the cell phone, not the 2 meter autopatch.

If there's a hurricane, ice storm, etc., and email still works, most folks (including me) will use it. Etc.

Where Amateur Radio steps in is when those things don't work, or are inadequate.

Of course when Amateur Radio really is needed and doing the job, the hams involved aren't going to be making sure they get on camera.

>
> What would you say has changed? What did it used to be, and what is
> it now?

the reason is that people were sold on the idea that:

They aren't making any more real estate.

Square footage is cheap to build, and will appeal to the type of
customer you want looking at your house when you move up to the next
level. After all, you're paying 100K for ht eland, you have to put a
proper house on it.

Oh dear, oh dear, the market is going bonkers, you just have to figure
out how to buy this place before the price goes up again. But once you
buy or build it, the value will just keep going up.

Real estate never loses value, so if you overspend now, you can just refinance in a couple years. Isn't that worth a couple years of a tight budget?

That isn't opinion BTW, I heard them all.

<snippage>

And that's one of the things that I think ARRL does pretty well at. It's an expensive game, but we gotta do it.

> And there's the media. More than one person has been allowed to have
> their flagpole or religious display because the media made an issue
> of it.

And Hams have to do a good job of working the media. we need to get the word out, and if we need to ply for sympathy or even get the public a little worked up for our plight, we gotta do it. And above all, we have to look the good part. We want avoid looking like the mad scientist - very hard for me, because I do get excited about this kind of thing. But I've been on TV and in the papers several times now with Ham radio activities, so they either like me or I've got entertainment value! 8^)

The discussion about emergencies and complex systems reminded me of Lister engines.

They're slow-speed diesel engines of very old design. Usually they are used as backup generators.

They've gathered a considerable following, as evidenced on websites like this one:

http://www.f1-rocketboy.com/lister.html

There's almost something steam-punky about them!

Some might wonder why anyone in his/her right mind would bother with such old technology, particularly when much smaller, lighter, newer generators are available.

One reason I can see is that in an emergency situation the big Lister can be fixed with minimal tools and parts. Another is that even a small one isn't going anywhere unless it's on a trailer. Still another is the ability to buy and fabricate parts - everything is so big.

The performance achieved is pretty impressive, once all the bugs areworked out.

What this has to do with Amateur Radio is:

1) In an emergency, old and simple has its advantages. This goes for radios as well as engines

2) No RFI!

3) The Lister isn't too fussy about fuel; I suspect one can run on diesel, heating oil, biodiesel, vegetable oil (in a warm climate) and maybe kerosene (in a cold climate.) Our radios should be as flexible.

4) The Lister is simple enough that a reasonably-knowledgeable non-professional can do whatever is needed to build and maintain a genset based on one. I think the same should be true of Amateur Radio rigs - maybe not all of them, but certainly at least some. While they may not be as fancy or "state of the art" as some, what matters is they work.

Amateur Radio Newsline(tm) Report 1695 - February 5, 2010

Amateur Radio Newsline report number 1695 with a release date of Friday, February 5th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. CQ Magazine files a rule making request to give hams more leeway under section 97.113 for rescue radio training, a Texas ham asks the FCC to create a United States 4 meter band and the National Conference of Volunteer Examination Coordinators again revises the recently revised Technician Class question pool. Find out more on Amateur Radio Newsline(tm) report number 1695 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: CQ MAGAZINE FILES RULES CHANGE REQUST ON 97.113

One of the nations leading ham radio publications is joining the movement to modify section 97.113 of the Amateur service rules. This, to permit hams in the employ of government or relief agencies to take part in disaster training drills. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the rest of the story:

--

To hear talk among some in the amateur radio community, the FCC's decision to offer an interpretation of this rule more than a year ago without the filing of a complaint or request for clarification still is puzzling and even troubling.

The commission legal counsel/enforcement officer, read a posting by on a bulletin board by a ham who helped his hospital put together and then participated in a disaster drill.

That ham got a communication from the FCC saying he was in violation of the provision of 97.113 regarding pecuniary interest and an employer benefiting from amateur radio.

The perception by some of this heavy-handed approach by the new FCC administration sent shockwaves among not only the amateur community but those it serves.

The result: Some organizations backed away altogether from using the services of amateur radio for fear they could come under FCC scrutiny.

Then, a clarification from the FCC that waivers could be granted.

What followed, a petition by a group of hams led by noted radio instructor Gordon West, WB6NOA, seeking to change the rule to allow hams to take part in disaster training exercises put on by their employers.

But CQ Magazine editor Rich Moseson, W2VU, says so much more is at stake and that's why he filed a more inclusive petition with the FCC.

"We realized in reading through all this that really this interpretation goes beyond disaster and emergency communication," Moseson explains. "A very strict reading of this rule means, for example, that I as an employee of CQ Communications, would not be able to do equipment reviews.

"Or, at least, not if involved transmitting. And, for decades, staff members of magazines have been doing equipment reviews. And, it's never been a problem. But if you read this closely, if I transmit for the purpose of doing an equipment review, then, I'm in violation of the rules."

But Moseson says the FCCs interpretation of this rule, goes even further, and could impact the Amateur Radio on the International Space Station Program.

"Everyone thinks it's (ARISS) a wonderful program," Moseson says. "It's good for NASA, it's good for ham radio, it's good for kids, it's good for the national interest in promoting young people's interest in science and technology by allowing them to communicate with astronauts on board the space station via amateur radio.

"No one questions the value of this program. But the astronauts are NASA employees and they are clearly communicating on behalf of their employer when they are operating in an ARISS contact."

And, Moseson says, even though they're making those contacts on their free time, if you look at the FCC interpretation, they, too, are in violation. So, Moseson says, it's time to act and he suspects the American Radio Relay League also will weigh in shortly.

"My understanding was that the ARRL board was going to consider at its meeting a couple of weeks ago, filing its own petition," Moseson says. "My guess is that the FCC will wait until the League files its petition and then group all three of them, or more if there have been others filed as well, into a single petition that is put out for initial public comment."

In the meantime, Moseson says the interpretation stands and waivers will have to be sought.

Moseson says it's clear this issue won't be decided quickly. In most cases, he says, it could take up to a year or more for the FCC to issue it's decision.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

You can read the entire story on the CQ petition to change section 97.113 of the Amateur service rules beginning on page 8 and continuing on page 114 of February 2010 issue of that magazine. Its also on-line at http://www.cq-amateur-radio.com/ZeroBiasFeb10.pdf (ARNewsline(tm))

RESTRUCTURING: PETITION FILED FOR CREATION OF U.S. 4 METER BAND

QRZ.com lead moderator Glen Zook, K9STH, of Richardson, Texas has filed a Petition for Rulemaking to the FCC. One aimed at creating a 70.000 MHz to 70.500 MHz amateur radio band in the United States. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In his January 27th filing, Glen Zook, K9STH, notes that the 4 meter band spectrum has been authorized in a growing number of European and African nations. He says that by establishing such privileges for amateur radio operators in the United States and other areas over which the Commission has jurisdiction that it would be of great benefit to those operators residing in such areas.

According to Zook, the recent migration of broadcast television stations to primarily the UHF frequencies has basically eliminated any probable interference to television channels 4 or 5 which otherwise might have occurred. This is because the 4-meter band is located on frequencies that were allocated to television channel 4. Since the 4-meter amateur radio band does not fall in the 72.0 MHz to 76.0 MHz segment which is allocated to Operational Fixed and various mobile services there would be no potential co-channel or adjacent channel interference.

In his proposal Zook suggests that the FCC allow all classes of amateur radio operators operating privileges on this new band. However, he also suggests that Novice Class licensees be restricted to a lower output level than those allowed for Technician, General, Advanced and Extra Class licensees. He says that if the present maximum power output limitation of 1500 watts P-E-P is granted to the higher class licensees then the Novice Class licensees should be restricted to no more than 200 watts power output as per most of the privileges granted those operators who hold a Novice Class license.

It should be noted that there are still a small number of low-band VHF television transmitters in operation and their owners will likely oppose the creation of a new ham band at 70 MHz. That said, the level of opposition from broadcasters will likely be far less than it would have been before the Digital Television transition of June 2009. Thats when most of the nations VHF low band stations on channels 2 through 7 migrated to channels in the U-H-F range.

If the FCC decides to issue it a Rule Making designation, Glen Zook's petition to create a ham radio allocation at 70 MHz is likely to garner a lot of support from within the ham radio community. Especially from those who operate in the world above 50 MHz.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You can read the entire K9STH filing on-line at

RESCUE RADIO: FCC TEAM ASSESSES HAITI'S COMMUNICATIONS NEEDS - PRAISES HAM
RADIO

An FCC led telecommunications assessment team is on-the-ground in Haiti evaluating the status of the country's communications infrastructure. This, following the devastating earthquake that struck that island nation on January 12th.

The communications experts were deployed in coordination with the United States Agency for International Development. They came in response to a request from the Director General of Haiti's Conatel which is the national telecommunications regulatory agency in that quake devastated nation

The FCC team was led by International Bureau Chief Mindel De La Torre. She and the others will continue to work with Conatel and local Haitian telecommunications providers to come up with practical options for restoring communications services to the people of Haiti.

Speaking from Port au Prince, De La Torre said that after seeing the destruction of the country, and particularly the telecommunications infrastructure, that she now has a much better understanding of the monumental task to keep communications up and running in such a difficult environment. She added that it is clear that the communications sector is making a huge difference on a day-to-day basis for Haitians struggling with tremendous personal and property losses.

Bureau Chief DeLaTorre has also taken note of the contributions to earthquake relief efforts of the words ham radio community. Writing in the FCC blog, DeLaTorre noted that in the aftermath of the earthquake, the amateur radio community in Haiti, the Dominican Republic and elsewhere has dedicated equipment and spectrum resources to the relief efforts. YHOTY: 2010 YOUNG HAM OF THE YEAR AWARD NOMINATING PERIOD NOW OPEN

The nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear and CQ Magazine combine to honor a ham radio operator age 18 or younger. This, for his or her contributions to ham radio or to society itself through ham radio.

It is expected that Vertex-Standard will once again fly the winner to Huntsville, Alabama, where the award will be formally presented. Hotel accommodations as well as convention tickets are normally provided. CQ Magazine says that it will again treat the recipient to a week at Spacecamp-Huntsville as it has done in years past.

Please note that if the recipient is unable to travel to the convention, Amateur Radio Newsline will attempt to arrange a special award ceremony where he or she resides. This might be at his or her school, in front of his or her Amateur Radio club. In this case the trip to the convention will be forfeited by the recipient, but all other aspects of the award will remain.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both mail in and electronic submission are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the words "here" to download the directions and the form. We look forward to hearing from you. (ARNewsline(tm))

RADIO LAW: CODIFYING THE VANITY CALL SIGN RULES

The FCC is in the process of making permanent the rules governing the Vanity call sign program. As regular listeners are aware, late last year, the FCC issued a Notice of Proposed Rule Making titled WT Docket 09-209 that seeks to amend the Commission's Amateur Radio Service rules. This, to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations.

Now, interested parties may make comments on this Notice of Proposed Rule Making via the Federal Rulemaking portal or the FCC's own website. Comments must be submitted by March 26, 2010 with reply comments are due no later than April 12, 2010. The U-R-L's to use are http://www.regulations.gov/search/Regs/home.html#home, or via the FCC's Web site at http://fjallfoss.fcc.gov/ecfs/. (ARRL, FCC)

**

RADIO TESTING: NCVEC RELEASES REVISED ELEMENT 2 TECH QUESTION POOL

A revision to the new Element 2 Technician class ham radio testing question pool released this past January 4th. This, as the Question Pool

Committee of the National Conference of Volunteer Examiner Coordinators says that after further review that it found and corrected more than 50 minor typographical errors. Also that it clarified the questions and answers making them easier to understand.

These changes are now incorporated in a revised Element 2 question pool that contains some 400 questions. 35 are selected to make up any given Element 2 exam. And in a departure from past Element 2 question pools this one contains graphics and diagrams.

According to the NCVEC the errata list, as well as the revised Technician question pool, is available on the organizations website at www dot ncvec dot org. This new Element 2 question pool becomes effective for Technician class examinations administered on or after this coming July 1st and will remain valid until June 30, 2014. (NCVEC)

**

COMMUNICATIONS LAW: NEW GROUP FORMED TO FIGHT DISTRACTED DRIVING

A new group with government support is targeting all forms of distractions while driving. And while amateur radio is not yet in its gun-sights, hams will want to keep a close eye on this one as we hear from Frank Haas, KB4T, has the details:

--

The National Highway Traffic Safety Administration has teamed up with the National Safety Council for form a new organization to end distracted driving. This through the creation of a new organization called FocusDriven which is the first nonprofit organization devoted to combating distracted driving and supporting victims of distracted drivers.

The National Highway Traffic Safety Administration defines distracted driving as any non-driving activity a person engages in that has the potential to distract him or her from the primary task of driving and increase the risk of crashing. It notes that there are three major types of driving distraction that incude visual, manual and cognitive. In simple terms this means any activity that causes a driver to take one's eyes off the road, ones hands off the steering wheel, or one's mind off of driving.

While distracted driving has always been a safety issue. Now, with the advent of mobile communication devices and other mobile technologies, it has become what the FocusDriven calls a growing epidemic. The group considers cell phone texting the most alarming of newer distractions, because it involves all three types of distraction. Other forms of distracted driving includes driving while using a cell phone, changing a radio station, eating and drinking, talking to passengers, grooming, using a CD or Mp3 player, watching a video or reading, or using a PDA or navigation system or other portable electronic devices.

So far, a ban against texting while driving has been enacted in 19 states plus Washington D.C. and Guam. Six states plus Washington D.C. and the

Virgin Islands have banned the use of all hand-held devices for any reason while driving. Most but not all do have exclusions for users of two-way business communications and some have extended that exclusion to amateur radio.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

RADIO LAW: DEPARTMENT OF TRANSPORTATION BANS TRUCKERS FROPM TEXTING

The Department of Transportation has announced an immediate ban on operators of trucks and buses on U.S. roadways text messaging will driving. Transportation Secretary Ray LaHood announced the ban on Tuesday, January 26th saying that this is an important safety step and we will be taking more of them to eliminate the threat of distracted driving.

Officials of the trucking and bus industries say they support the new ban on texting while driving buses and trucks. The president of the American Bus Association told the press that many bus companies already have similar policies in place. Drivers of interstate buses and large trucks who text while driving could face fines of up to $2,750.

Secretary LaHood has been campaigning against texting and cell phone use while driving for some time. He says enforcing restrictions on texting by long haul drivers will be difficult and he's calling on the wireless industry to work with public officials to come up with a solution. (Published reports)

RESCUE RADIO: PROPOSED EAS CHANGES COULD LEAD TO ANNUAL TESTS

Federal telecommunications officials are planning to hold the first nationwide test of the broadcast Emergency Alert System, but they have yet to set a specific date. And it will not happen until new regulations are in place.

FCC rules currently provide for voluntary testing at the state and the local level, but not nationally. The FCC has now issued a Second Further Notice of Proposed Rulemaking to change the rules governing the Emergency Alert System so as to conduct national testing at least once a year.

The FCC is also proposing requiring a more detailed form documentation from participating TV, radio and cable operations. The information would be due to the commission within 30 days after the test, and would be made available to the public. The agency is also asking for feedback on the

equipment used to retransmit the EAS codes, which the agency says differs depending on the manufacturer. (FCC, Broadcast &Technology)

**

HAM HAPPENINGS: ARRL AUDIO NEWS TEMPORARILY SUSPENDED

The American Radio Relay League has temporarily suspend its ARRL Audio News operation. According to the League, the suspension was brought about by the planned introduction of the ARRL's new and redesigned website. It said that in order to do this properly, the League was suspending the ARRL Audio News operations while it looks for solutions that will enable it to provide the technical quality and distribution channels expected of that organization. The last newscast in the current ARRL Audio News series was issued on Thursday, January 28th. At our airtime the League has not set a date for the return of its audio news service. (ARRL)

**

HAMVENTION HAPPENINGS: 25TH ANNUAL DAYTON DX DINNER ON MAY 14TH

The SouthWest Ohio DX Association will sponsor the 25th annual DX Dinner at the 2010 Dayton Hamvention on Friday, May 14th at 6 p.m. Eastern time. The venue is the Crowne Plaza Hotel, in downtown Dayton. Program details and a list of the prizes will be available on the SouthWest Ohio DX Association website as soon as both are confirmed. You will find that along with information on reservations in cyberspace at www dot SWODXA dot org (SWODXA)

**

HAMVENTION HAPPENINGS: 2010 DAYTON CONTEST DINNER MAY 15TH

And the 18th Annual Dayton Contest Dinner is now slated for Saturday night, May 15th at 6:30 P.M. local time. The venue is the Van Cleve Ballroom also at the Crowne Plaza Hotel in downtown Dayton. Master of Ceremonies will be CQ Magazine Contest Editor John Dorr, K1AR. Along with Dorr will be CQ World-Wide Contest Director Bob Cox, K3EST, who will formally announce the 2010 CQ Contest Hall of Fame inductees. Tickets are available only on-line at www.contestdinner.com. (K3LR)

**

THE SOCIAL SCENE: THE VISALIA TOP BAND DINNER

And the famed Top Band Dinner at the 2010 Visalia DX Convention will be held Friday, April 16th, at the convention hotel. That's the Birth Room at
the Visalia Holiday Inn in Visalia, California.

This years dinner speaker is Bruce Butler, W6OSP. He will present the program "The Low Bands from K4M, Midway."

Dinner is buffet style and costs $36. For reservations an email to WB6RSE at his QRZ.com address. And for those of you not aware, the term Top Band

refers to 160 meter operation. (Via e-mail)

CHANGING OF THE GUARD: LOUISIANA'S MR. HAM RADIO FRIENDSHIP - MIKE KING, W5PY, S..K

Amateur Radio has lost a great friend and ambassador in the New Orleans and southeast Louisiana region. Mike King, W5PY lost his battle with cancer late Wednesday evening, January 27th. W5PY was a ham's ham. Mike served as ARRL Assistant Section Manager for the State of Louisiana since 2002 and was net Manager for the Louisiana Traffic Net. Passing traffic was a passion for W5PY. He was also past president and past vice president of the Ozone Amateur Radio Club in Slidell, LA. and was a regular net control for the club's weekly 2-meter net. Any visitor to club meetings was greeted by
Mike at the door and introduced to everyone in the room. Mike also sent welcome letters to newly licensed hams. A friendlier guy you could never hope to meet. Even very late into his battle with cancer he could be found at the door of his church greeting worshipers as they filed in. An intensely private man, Mike never complained or hardly ever acknowledged his terminal illness.

As a naval aviator Captain King flew just about everything with wings. From fighters off of aircraft carriers to cargo planes and everything in between. Mike was awarded many medals and honors for his service in Southeast Asia, Grenada and Viet Nam. W5PY was stationed around the world and was assigned to the Vice Chief of Naval Operations Air Warfare in the Pentagon and Commander Naval Air Forces Atlantic Fleet at NAS Norfolk. After retiring from the military he flew for Braniff Airlines and retired as a 747 First Officer flying freight between Miami and South America. W5PY was an Eagle Scout and 32nd degree Mason. Sailing was a passion as well. He spent many hours sailing his Beneteau 321 on New Orleans' Lake Pontchartrain from his waterfront home in Slidell. He was a volunteer for the First Baptist Church of Slidell, the Red Cross, Life Songs Christian Radio and North Shore Regional Medical Center where he was very active during Hurricane Katrina, practically living at the hospital and spending countless hours at the hospital's ham station passing traffic.

Mike was a fixture at just about every hamfest or testing session in south Louisiana and Mississippi talking up the hobby, welcoming new hams and

spreading the word about the Slidell, LA hamfest. I'll never forget the time he came up to me and introduced me to his girlfriend, who he called "Crayola". "Don," he said, "I want you to meet Crayola. I call her that
because she's colorful. I love to surround myself with colorful people, Don. That's why I like you so much. You and Crayola are about the most colorful people I know and I wanted you guys to meet". That was Mike King,
W5PY. He was a friend to ham radio and all he met. In the more than 10 years I knew him I never once heard him say anything negative about anything or anyone. He is survived by his mother, sister and brother Joel King, KM5CA, All of San Antonio, TX. He was interred at Port Hudson National Cemetery near Baton Rouge, LA. Mike King, W5PY was 62. (AE5DW)

**

THE CHANGING OF THE GUARD: RADCOM COLUMNIST NORMAN FITCH, G3FPK - S.K.

And from the United Kingdom comes word that Radio Communications Magazine VHF/UHF columnist Norman Fitch G3FPK, has also become a silent key. The Southgate news reports that Fitch was found dead at his home in Surrey England on Friday, January 29th.

Back in April of 1989 G3FPK took over the VHF/UHF duties from Ken Willis, G8VR, when it was part of the Spectrum Analysis feature of the magazine. The column then became VHF/UHF News and eventually, it became the VHF/UHF column of today.

Norman Fitch, G3FPK, is described as having been a keen operator on the VHF/UHF and Microwave bands and had been writing for over 20 years. His friends say that he will be greatly missed. (GB2RS)

HAM RADIO IN SPACE: NASA TO LAUNCH THREE NEW HAM RADIO CUBESATS

NASA plan to launch 3 CubeSats with amateur radio educational payloads late in November. The small research satellites will go into orbit for several universities as part of the agency's Educational Launch of Nanosatellite mission.

The satellites, called CubeSats because of their shape, come from Montana State University, the University of Colorado and Kentucky Space. Montana State designated its satellite as Explorer 1 Prime in honor of the scientific discoveries of the Explorer-1 mission. Colorado's satellite is named Hermes with a mission objective to improve CubeSat communications through the on-orbit testing.

But its Kentucky's bird called KySat-1 that is what the ham in the street is watching because it is believed to be the first CubeSat ever to carry a 2 meter to 70 cm FM transponder. Truly a crossband repeater in space and one that should be accessible by most hams within its flight path.

CubeSats are in a class of small research spacecraft called pico-satellites. They have a size of approximately four inches, a volume of about one quart and weigh no more than 2.2 pounds. The University of Florida was selected as an alternate in case one of the three primary spacecraft cannot fly. (ANS, Southgate, others)

**

WORLDBEAT: INCREASED VENUE COST CLOSES HAMFEST

Due to increased facility rental costs at the venue of the United Kingdom's Chesterfield Rally the planners have decided to cancel all future events. They add that they have been unable to secure another location with the same space and facilities in the region apologizes for any inconvenience to attendees and exhibitors who were looking forward to this year's hamfest. The group's website at www.chesterfieldrally.com is still online and a new website at www.m0oct.com will carry details of future activities. (G6IBQ)

**

WORLDBEAT: TOP BAND FOR SPANISH HAMS IN CONTESTS

At the request of the Spain's national ham radio society the Spanish Director General of Telecommunications has permitted the use of 160 meter Top Band in certain contests. In all, some seven contest periods through the end of the year will permit Spanish hams the use of 1810 to 2000 kHz. A complete listing will soon be on-line at the society's website at www.ure.es (URE)

**

DX

In DX, word that EI6DX, will be active portable 6W from Senegal, in November. He will concentrate on the lower bands and CW. QSL via RX3RC, by the bureau or direct. Look for updates via the web at www dot ei6dx dot com.

The VP8 South Shetland Islands AO-51 operation by XR9JA will be active through February 28th. This affair was originally planned for January but had to be rescheduled. The operation is taking place at the Chilean Naval base on Greenwich Island. QSL via CE5JA, either direct or via the bureau.

7Q7HB is again heading to the warmer climate of Malawi for a period of 3 months or so. His activity will probably be on the Digital modes and on CW. QSL only direct to G0IAS with sufficient funds for return cards.

OH5SB operating maritime mobile will activate the wet squares at the Baltic on 2 meter SSB in summer 2010. His primary frequency on 2 meters will be 144.288 or 144.300. QSL direct to DL2SB.

DK1AX, will be active holiday style portable EA8 from Teneriffa in the Canary Islands through February 14th. Hes using only QRP CW on 15, 20, 30 and 40 meters with an Elecraft K1 at 5 watts to a Kelemen dipole primarily

on the QRP frequencies. QSL only via the bureau to DK1AX or direct with a self addressed stamped envelope. His address can be found at QRZ.com.

Lastly, UA3DJY, is back in Dar Es Salaam, and is operating from the D-I-T Communications Club station, 5-I-3-A, until March 1st. He says that he will try to be active on all bands with emphasis on 40, 20 and 15 meter CW and 17 amd 15 meters SSB. QSL via RK3AOL.

(Above from various DX news sources)

THAT FINAL ITEM: YOU TOO CAN OWN A SPACE SHUTTLE

And finally this week, if you have ever dreamed of operating ham radio from the Space Shuttle, you may soon have your chance. That is if you have a lot of extra bucks and a place on the ground to set one up as your hamshack. Graham Kemp, VK4BB of the W-I-A News had the rest of the story from down-under:

--

NASA has slashed the price of its shuttles to just 20.3m Euro. Discovery is going to the Smithsonian National Air and Space Museum while Atlantis and the Endeavour are up for sale.

The delivery date is given as the second half of 2011 and shuttle main engines are said to be available for the cost of transportation and handling.

Now it can truly be said to watch this space.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of the WIA News in Brisbane, Australia.

--

One problem that might be a bit hard to deal with. If your neighbors think that your tower and beam or unsightly imagine the protests that planting the Atlantis and the Endeavour in your back 40 might create. (WIA News)

Actually, no. Some go away for while, then come back. One of them is
fond of playing two feeds simultaneously. I think the term is "racing
to the bottom". In any event, they are not available all the time.

The really interesting part (and this isn't regulations, but just a
funny contract quirk, is that when the local football team is playing,
most of them have the exact same signal.

> By brother, W3TDH, is fond of saying that "The government's job is to

> indue course.

I mostly agree, at least in principle. My only problem is that some
times people will speak of deregulation when they actually mean a
shift of resources from one end to another. In the case of commercial
radio, we've gone from one monopoly of control by the F.C.C. to just a
couple of groups owning almost all the stations. So it's a monopoly of
regulations, to a monopoly of something else. The quality of the
product has deteriorated immensely. The question is that when a large
group of stations fail, and after all who is going to listen to two
feeds at the same time, how many will come back?

From: poster@giganews.com
Message-ID: <vaSdnY9gUKRbEPDWnZ2dnUVZ_r6dnZ2d@earthlink.com>
Source record: 1606

I might argue that this entire thread is to some degree ignoring technical advances and economic realities.

Speaking strictly of broadcasting, when the industry got its start there were no PLL frequency control systems, locked to a precisely-controlled 10MHz oscillator. There wasn't even crystal control. If you didn't have a skilled engineer, temperature changes and physical movement of the antenna would have your station running all over the dial. With no TV, MP3 players, or streaming media, if your station *did* drift on top of the Columbia station in the nearby city, half the audience would lose their nightly entertainment.

(I note with interest this page: http://jeff560.tripod.com/1923am.html . Note the large gap in the radio dial -- with no stations between 790 and 870, except for the dozens listed on "833" (actually a wavelength of 360m). These were a separate "class" of station - with looser technical requirements - and contemporary reports suggest they tended to drift among, and sometimes beyond, the 800-860 band, making it a bad idea to assign any other stations there!)

If you didn't have a skilled engineer, a valuable business might not be where its customers (or at least its audience) expected to find it -- and it could be interfering with the ability of its competitors to do business. Orderly business required strict regulation.

Today, an amateur can, in a few minutes, build a crystal-controlled oscillator that will stay on-channel with no attention whatsoever. Virtually all of our neighbors make daily use of portable UHF transmitters, in all temperatures and locations, without any concerns about off-frequency operation, and with no attention whatsoever. (usually they aren't even turned on/off) And at the same time, with media players, cable TV, and the Internet, radio is simply no longer the critical lifeline it was in the 1930s. The most popular radio station in town could go off the air for hours and 90% of the population wouldn't even notice.

The risk of interference from an unattended transmitter has plummeted, and the economic consequences if it *does* cause interference have also plummeted.

To put it a bit differently, I might venture that the ESPN station Mike cited feels the losses they're taking by airing two programs simultaneously or losing spots are less than the cost of hiring a qualified engineer.

(you might, on the other hand, argue that if the station were willing to invest in ensuring a proper signal, their advertising revenue might increase by a factor greater than the cost of hiring the engineer. Their management may have decided operating without an engineer makes economic sense, but management isn't always right!)

==========

I would suggest the goal of amateur licensing has also changed over the years.

Just as with commercial broadcasting, in the early days the improper operation of an amateur transmitter could easily cause massive interference, even outside the amateur service. Much important traffic (especially international traffic) was handled by radio and fragile to interference. If amateurs were to exist, it would be critical that they know how to confine their transmissions to their own bands. Commercially-built transmitters were rare, and even when they did exist a skilled operator was necessary to keep them on-channel. Tough technical examinations were necessary to ensure against interference.

Today, it's darned near impossible to radiate a signal outside amateur spectrum unless you want to. I would suggest the FCC would probably be fine with lifting the requirement for licensing examinations altogether! - really, we're not likely to cause interference to anyone except ourselves.

The only reason we still have amateur licensing exams is because *we* want them.

==========

I would also suggest the licensing exam has not become *easier* over the years, only *different*. Maybe to put it a bit differently, we've gone from deeply testing a few areas of knowledge, to shallowly testing a wide variety of knowledge.

When we were shut down for WW2, we had one MF band, four HF bands, and two VHF bands. We had three legal emission modes - CW, AM, and FM. Repeaters & satellites were unheardof, unless you were Arthur C. Clarke.

Today, we have one MF band, nine HF bands, and four commonly-used VHF/UHF bands. If you count all "digital" modes as a single mode, I still count six emission modes in common use on HF.

There's a lot more to know about. If we still expected amateur applicants to be able to sketch the diagram of a transmitter or figure the proper biasing of a common-cathode amplifier or explain how to keep an oscillator from drifting, it would take days to write the exam and months to grade it.

That's true for the 1920s, when broadcasting was brand-new and there was little regulation controlling it.

But by the 1930s the technical and regulatory problems had all pretty much been solved from the standpoint of which station gets which frequency, transmitter standards, etc. Crystal control dates from the mid-1920s and by the mid- 1930s was pretty much required for broadcast and other fixed-frequency commercial transmitters. It was becoming common even among Depression-era amateurs.

That was true more than 60 years ago, too.

Yet the Licensed Operator lived on, because the need for them was well understood.

>&#65533;And at the same time, with

I think that depends on where you are and how you define the "most popular station". Certainly here in Philly, if KYW (all news/weather/traffic/sports) or WHYY (public radio) were to go silent for even a few minutes, there would be a lot of questions.

Of course a big market like the Delaware Valley has many stations on the air, so there are many choices. I suspect that even in the 1920s this was true, because AM BC listeners weren't limited to just the local station. Particularlyafter dark.

In fact, the performance of many of those early sets is quite remarkable when they're in good shape and connected to a good outdoor antenna, as was the usual practice back in the 1920s and 1930s.

All true, but that's not the only reason for operator licensing. By the end of WW2 if not earlier, amateur transmitters that were pretty foolproof were in common use.

> Tough
> technical examinations were necessary
> to ensure against interference.

But the examinations even in those days weren't really very "tough". They only covered the basics. Even before the Novice license was created in 1951, teenagers and younger were licensed amateurs in the USA. For example, W3OVV (now SK) earned her Class B license in 1948 at the age of nine years.

> Today, it's darned near impossible to
> radiate a signal outside amateur
> spectrum unless you want to.

I disagree! There are lots of ways to do it.

For one thing, amateurs are still allowed to use older equipment and build their own. So they need at least some basic understanding of how their rigs work.

Even the most modern sets can have some odd behaviors, such as transmitting out-of-band if the supply voltage is too low. (PLL loses lock). If a ham doesn't know to use heavy-enough wire to connect the rig to the power supply, all kinds of trouble could result, yet the rig receives perfectly.

>I would suggest the FCC would probably be
> fine with lifting the requirement for licensing examinations
> altogether! - really, we're not

>
> The only reason we still have amateur licensing exams is
> because *we* want them.

I think not.

First off, they are still required by international regulations. Note that the CEPT folks recently changed their rules so that only Advanced and Extra US hams get full reciprocalprivileges.

Second, and more important, is the connection of licensing, control and responsibility.

Back in 1958, the FCC expanded the Citizens Radio Service to include 23 channels on 11 meters. They wrote specific rules to govern it, including the use of radio sets that were pretty much foolproof. No tuning, no tuneup, just select the channel, set volume and maybe squelch, push the button and talk. (Yes, some had tunable receivers but that was a cost-saving thing).

The "license" that was required entailed filling out a form and sending it in with the required fee. No exams of any kind.

At first 11 meter cb was pretty well behaved, but within a dozen years it was out of control. By the early 1970s, the rules had almost no effect on cb users. Superpower, failure to ID, deliberate interference, operation off of the allocated channels, RFI, use of radio to evade law

enforcement and much more were common.

I was a ham back then, and I remember how common it was for a ham to be blamed for TVI/RFI caused by cb users with "linears" that weren't.

The problems continue to this day. Just listen to the low end of 10 meters when the band is even moderately open.

Why did cb change for the worse the way it did within a few years of its creation, yet Amateur Radio, which has been around a lot longer and had much less enforcement, stay so well behaved, avoid such a change?

I'd say that the differences in licensing requirements had a lot to do with it. So did the concept of the licensed, skilled operator.

> ======>
> I would also suggest the licensing exam has not
> become *easier* over
> the years, only *different*.

I disagree, but the only way to really know would be to get hold of actual exams from the various times and compare them.

> Maybe to put it a bit
> differently, we've
> gone from deeply testing a few areas of knowledge,
> to shallowly testing
> a wide variety of knowledge.

That much I agree with!

But the test *methods* have also changed, and that makes a big difference.

For example, answering an essay question is a completely different thing from answering multiple-choice because with multiple choice you *know* the correct answer is there; you just have to determine which one it is. One cannot guess their way to a correct answer on an essay or show-your-work problem, but with a multiple-choice question that has 4 choices there's a 25% chance of a right answer even if the person knows nothing about the subject and chooses randomly. (The multiple-choice SATs avoid this by assigning negative points for wrong answers).

> Repeaters & satellites were unheardof, unless you
> were Arthur C. Clarke.

It's a minor point, but the history was a little different. For accuracy, here's what I found from the literature of those days:

The US amateur bands in 1941 were 160, 80, 40, 20, 10, 5, 2-1/2 and 1-1/4 meters. Frequencies above 30 Mc. were referred to as "UHF" or "the ultra-highs" back then, and above 300 Mc. wasn't really regulated at all.

Amateurs back then were mostly using CW or AM, but a handful used SSB (considered a variant of AM), FM, and MCW. There were amateurs using duplex on 5 meters, and even a repeater or two. Model control was permitted as well, and had been used by hams since the 1930s.

While many if not most amateurs had only simple HF receivers and transmitters, a few had quite sophisticated stations, including things like VFO (then called "ECO"), remote control, double-conversion superhet receivers with crystal filters, rotary beam directional antennas, andmuch more.
>
> Today, we have one MF band, nine HF bands, and four
> commonly-used
> VHF/UHF bands. If you count all "digital" modes
> as a single mode, I
> still count six emission modes in common use on HF.

Sure - but most of them were in use by hams 50 years ago:

CW and AM date from the beginnings of Amateur Radio - 1920s at thelatest.

SSB was used by a few hams in the 1930s and really took off after 1948

FM (called NBFM) was popular in the late 1940s as well, to the point that manufactured receivers and transmitters sometimes had optional NBFM adapters available.

SSTV was developed by hams in the late 1950s.

RTTY was authorized for US hams in the late 1940s and was reasonably popular considering the cost of the machines and additional equipment/ supplies required back then.

There's a lot of ham gear from 40, 50, even 60 years ago that can be used on the air today and the ham on the other end of the QSO will not know you aren't using a "modern" rig unless you mention it. Even some 1930s equipment can be made to work so well that it is indistinguishable from current equipment.

The other night I had an interesting and fun QSO with a ham in North Carolina. He was using a Flex 5000 SDR; I was using a homebrew all-hollow-state transceiver of my own design and construction. The mode was CW, the band was 80 meters. Neither of us could tell thedifference.

That's a very good thing.

>
I don't see how that would be the case.

But it's a moot point. The FCC is extremely unlikely to change from the current test methods, if for no other reason than cost.

So the question is, given the test method of multiple choice exams, how do we tailor the question pools to do the best possible job? We hams have an element of control, because anyone can submit questions to the QPC for inclusion in the pools. And there's no upper limit to the pool size.

Of course a question that requires differential calculus to solve probably isn't going to be accepted. Nor is one that focuses on technologies not used much in Amateur Radio. But a lot can be added.

There are presently a lot of radios that are relatively reliable even if fixing them might be beyond most hams. I've built Heathkits, simple cw transmitters and receivers and bluntly to fix most, I'ld need more test gear than is likely to be available on the spur of the moment. Yeah, I know how to use an antenna analyzer as a signal generator or as a relatively poor GDO, and I almost always have a 50 watt dummy load. I suspect that there presently isn't a ham equivalent of a Lister engine and unless somebody builds one, there won't be. Besides for ham radio, such rigs would need spare parts and some place to work on them. A spare radio would still be a better choice than one that can be fixed in five hours when time is of concern. Of course if you can find or design a kit that's functional, reliable and has easy to acquire spare parts, I'ld like to try building one.

One other point, making rigs simple often amounts to having to limit what frequencies are covered. It doesn't do much good to have let's say an 80M cw rig if contacts are more likely on 40M, or that's where people can hear you. The Icom MKIIG and Yaesu FT-857 are relatively small, relatively reliable, run on 12 volts and are relatively simple to operate. I have a TS50 for HF, but it's getting really long in the tooth, not sure I'ld want it as my sole rig in an emergency. For an emergency, I would prefer one of them especially if I had several. Switching power supplies are relatively tolerant of voltage variations produced by generators so they could be used to power such rigs assuming you have fuel available for a genset.

Finally, maybe we're both ignoring the possibility that the best approach would be complicated rigs that diagnosed their own problems and indicated which module to replace or repair. Given a collection of the modules most likely to fail, that would be the real ideal choice.

Take a look at

www.elecraft.com

particularly the K2 and K3 transceivers.

Of course!

But the point is to be able to use what's available.

> Of course if you can find or design a kit
> that's functional,
> reliable and has easy to acquire
> spare parts, I'ld like to try building one.

See the above reference. Thousands of Elecraft rigs have been built and
used, with a minimum of tools and test equipment.

Of course. But there's also the opposite extreme, where it is expected
that one rig will do everything.

All good rigs but how reliable are they really? And how fixable?

One trend I see in Amateur Radio, which IMHO isn't a good one, is the idea that ham rigs are like consumer electronics, with a useful life of maybe a decade, and "no user-serviceable parts inside".

> For an emergency, I would prefer one of
> them especially if I had several.

Having several of anything is good planning in an emergency. But it's also expensive!

>&#65533;Switching power supplies are relatively
> tolerant of voltage variations produced by
> generators so they could be used
> to power such rigs assuming you have
> fuel available for a genset. &#65533;

IMHO a better option is rigs that can run from a variety of energy sources so that you aren't tied to a genset or auto electrical system.

> Finally, maybe we're both ignoring the

The problem is that the complexity required to do that can reduce the overall reliability...

I know the following is a blue-sky fantasy, but here's what I'd like to see.

In the world of PCs, there are lots of standards which have evolved over time and been adopted by many different manufacturers. The result is that you can assemble, upgrade or repair most PCs made in the past 15 years or so with just a screwdriver.

Wouldn't it be great if ham rigs were built the same way?

Ditto.

I've been licensed since 1958 and have gone through a boatload of rigs
-- old, new, military surplus, homebrew, QRO, QRP.

I lived in Bay St. Louis, MS, when Hurricane Katrina took out the town. My FT-857 with the ATAS-120 antenna mounted on the back of my truck provided the only commo in and out for about 12 hours until National Guard arrived.

I'm not familiar with the ICOM or Kenwood equivalents but the FT-817 and -857 seem to me to be almost perfect emergency rigs: Cover 80-435, all modes; very complex rigs but can be set up for simple operation; reliable; very portable; low power requirements. In fact, with a battery and a solar charger, the FT-817 could operate indefinitely, as could any other similar rig with power throttled back to around 5 watts.

Not really. The community will reach a point where it looks like it is. The restrictions try to artificially modify the appearance. I have general dislike for real estate people. I've dealt with enough personally and professionally and have found very few who really get it. Rednecks will have dogs...and pickup trucks. Don't want to deal with those, buy elsewhere. But after moving in, don't force them to get rid of the trucks. (This one I speak from experience...7 long years of listening to these hounds...they finally moved out and that home now has a Mercedes and no dogs)

As far as preserving value, that should be fairly easy, if everyone involved is reasonable. It gets bad when you have the one idiot that wants to raise livestock on a 6000 sq ft lot. But the community can take care of that without restrictions. I keep my property nice, because I want to. I absolutely HATE a gun at my head regarding it. Its a Texas thing...

And adding to the general angst is where some individuals were conned into thinking the house is their pension plan. No, its a place to live, and don't expect a 25% gain every year, as the real estate agent told you it would.

I guess my, and others perspectives would be different if there were some areas built out without the absolute ban on antennas, specifically. But these people writing the restrictions seem to have a font of boilerplate that is bad.

And why is it recently that it has become so bad? To my view, homes built pre-1980 or so are easier on the restrictions. All of the "new" construction is where it is severe. And in an area like Austin Texas the construction has been intense over the past 15 years. (the saying goes...everytime they raise taxes in California a new subdivision is built here)

Take care.

I guess I'd argue that there's still a BIG technological split between
wh at was required to keep a transmitter on-channel (and without spurs)
even in the early 1950s vs. what's necessary today. I *know* I once
inadvertentl y called CQ on 21.6MHz because of a mistake tuning a
HW-16, that was in the early 1970s. That mistake would be impossible
with today's amateur gear.

The licensed operator was necessary through the 1970s. Today, speaking
s trictly from the standpoint of avoiding ruinous interference to
economically-important services, my argument is that that's no longer
the case.

(there may be other reasons for maintaining the licensing requirement
-- to prevent the amateur service from being hijacked into a different
purpose, to ensure there's a "workbench" for experimentation with new
circuits and /or means of transmission, etc...)

I stand somewhat corrected. The last Philadelphia Arbitrons on
http://ww w.radio-info.com/site/markets/grid/philadelphia show WBEB-FM
exceeded a 10% rating. It was however the only Philadelphia station to
do so. KYW was a fairly distant second, (well below 10%) and WHYY got
less than half KYW's numbers. (not that WHYY did badly -- they beat
three high-powered commer cial FMs and Philadelphia's other 50,000-watt
AM station, and if they didn't have to split the public radio audience
with WRTI they'd have been in 5th place.)

But I'd stick to my guns to argue that if KYW went off the air, more
than 90% of Philadelphians wouldn't immediately notice, and probably
wouldn't notice for some time.

That's certainly a good reason for us to still want amateur licensing
exams!

But I would suggest the vast majority of the problems resulting from CB
w ere limited to CB spectrum or other spectrum of little economic
value.

Even much of the RFI was not the CBers' fault (even if they were
operatin g at illegally high power); often the cheap consumer gear
would have reacted the same way to a perfectly legal 28MHz licensed
amateur transmission.

Really I don't think it's *possible* to objectively prove whether the
exa ms are easier or not... have a group of people take both exams &
see how the pass rates compare? -- but most EE graduates today have no
idea how a vac uum tube works (and would find it impossible to pass the
1940 exam) while no EE graduate in 1940 had ever heard of a transistor.
(and would find it i mpossible to pass the 2010 exam)

though if you have four choices for each question, if you don't know
your stuff you're not going to be able to guess enough right to pass.
It's more about providing the proper selection of wrong answers!

You could argue that essay questions in part test the wrong skill -
your ability to cause someone else to understand the concept, not your
understanding of the concept itself.

> technologies not used much in Amateur Radio. But a lot can be added.

I can certainly concur with this.

Let me make it clear, I'm not trying to argue that we shouldn't have
lice nse exams! I'm suggesting that *the FCC* doesn't really care if
we have exams -- *the amateur community* certainly feels we need them,
and I thin k the amateur community is right.

I think there are two keys to effective exams: - The largest possible
question pool. Make it impossible to simply memor ize the
questions/answers. - Careful selection of the multiple-choice answers.
Provide wrong answer s that are close enough to the right answer that
applicants have to know the concept to find the right onw.

Even inadvertently. In 2000, I bought an ICOM IC-746 HF/VHF transceiver brand-new from one of the major ham radio stores. One of the options in the menu was to beep when you tuned to the edge of a band. I noticed that on some bands it did not beep at the edge. For example, on 75 meters, as I tuned upwards to and beyond the 4.0 MHz band limit, the radio did not beep until I got to 4.5 MHz. I connected the rig to a dummy load, and sure enough I could transmit all the way up to 4.5 MHz (well, actually 4.999 MHz).

I'm a Volunteer Examiner, accredited by ARRL/VEC, so I have some experience here. The current multiple-choice system is the most practicable for testing at many sites in the field. My VEC sends to me test question booklets with the required number (35 or 50) and distribution of questions taken from the pool. They supply us with templates to put over the answer sheets to grade the exams. Everything that we do regarding grading is specified to the nth degree. This is to protect us as well as to insure the integrety of the testing process. If we were to switch to essay questions, I, and I suspect most of my fellow VE's, would not feel competent to grade them. Grading of essay questions is necessarily subjective, not objective.

I do like the idea of negative points for wrong answers. But, that's not the program as we operate it. If we did deduct for wrong answers, we'd probably have to reduce the passing percentage of 74% (26 out of 35) to something lower, say 65%. And any changes in this would have to be approved by the FCC in Part 97.503.

But they could do more in the concepts of things like Fourier analysis and field theory, without having to work with big complicated equations. I have a Masters degree in Electrical Engineering, so in college I studied all kinds of complicated equations dealing with Fourier analysis and field theory (and had to derive some of them on closed-book tests). But after I graduated, I rarely had to apply those equations directly, just know the concepts and apply them. The basic concepts can be understood, at a qualitative level, by simple diagrams and hand-waving.

I agree with your assessment. The station was probably bought at a good price, and certainly the national advertisers don't know about the outages, or "doubleages". Local advertisement is appreciated, but probably more of a nuisance than an asset, because once again, they have to pay a person to take care of canvassing and deal with people. And employing a person costs money.

I think that the business model is to employ an absolute minimum of people, to get checks that are automatically distributed from HQ from the national advertisers, and to extract profits until it isn't profitable any more - When the tower falls from lack of maintenance, the station is finished. The people involved are not interested in Radio, per se, but in what they can extract from it, until they move on to another thing to generate cash. Its a very short term outlook these folks have. Get it, use it up, leave it.

<snippage>

> I would also suggest the licensing exam has not become *easier* over
> the years, only *different*. Maybe to put it a bit differently, we've
> gone from deeply testing a few areas of knowledge, to shallowly testing
> a wide variety of knowledge.

I would agree here, Doug.

The closest I have ever been to old time tests is an old 1957 Ameco test guide for Novice and General. I was a little shocked to find that some of the questions were verbatim to today. Granted there are only so many ways to phrase some of them, but verbatim? Looking over the questions, the Novice was amazingly easy, and the General would have required me to spend an afternoon studying about tube circuits. No difficulty there, at least for my current knowledge level. So yeah,

they weren't the questions on the official exam, but I can't help think the books were put out with a very good idea of what the questions would be.

So, I believe that the answers have been out there for a lot longer than F.C.C. question pools, Bash books and all the other examples of how things are easier today than they were "when I was a kid".

So what is the discrepancy? I think that we sometimes forget that we are always learning. There was a time when I would have had difficulties with the tests. Before I learned what I needed to know, they would have been hard stuff. I suspect that many of the folks who look at today's tests and scoff, remembering how they had to struggle when taking their version of the same class might just be showing how much they've learned in the intervening years.

That depends on the transmitter.

And unlike other services, amateurs are allowed and even encouraged todesign, build, repair and modify their own rigs. Any US-licensed amateur witha clean record is trusted by the FCC enough that no formal certification, type-acceptance, documentation, etc. is required to put a transmitter on the air. That applies to any rig an amateur might use, regardless of technology, age, band ormode.

Of course nowadays many if not most hams just buy "modern" manufactured plug-and-play equipment. Point is, we're not *required* to do so.

> I *know* I once
> inadvertentl y called CQ on 21.6MHz because of a mistake tuning a
> HW-16, that was in the early 1970s.

The mistake was probably not in tuning. What I suspect happened isthat you had a 40 meter Novice crystal plugged in, and tuned up on 15meters. The 40 meter Novice band back then was 7.150-7.200 MHz, so a crystalnear 7.200 would triple to about 21.6.

Such mistakes were common back-when. I suspect they are why so many Novice rigs had the crystal socket right up-front, rather than havinga switch and multiple sockets inside. Some hams would color-code their crystalsto avoid such problems.

No amount of skill in tuning nor technical know-how would prevent such a mistake unless the person knew to look at the crystal and multiplyby 3.

> That mistake would be impossible
> with today's amateur gear.

I disagree!

Yes, a rig with no tuneup controls cannot be mistuned, and you can'tleave the wrong crystal in a rig that doesn't use them. But even "modern" rigscan bemisused.

For example, many linear amplifiers still require manual tuneup, andmistakes that cause out-of-band spurs are possible. Not all "modern" rigs arelocked out of transmitting precisely at the US amateur band

edges, and even thosewhich are can be (and sometimes are) modified to transmit out-of-band forMARS operation. No rig I know of enforces subbands-by-mode or subbands-by-licenseclass.

New rigs don't eliminate the possibility of operator error. The oldclassic mistake of wrong-crystal has been replaced by the modern classic of forgot-to-turn-off-the-split-button. Etc. Doesn't mean new hams areany dumber, just that while the details change the basic issues (operator know- how) remain.

Most of all, a US amateur license permits the use of older rigs - likethat HW-16. Which brings up a related issue:

More than a few newer hams I have encountered got into Amateur Radio *specifically* to use older rigs. Often the rigs they want to use are older than theyare. It's a retro thing, like old cars, vintage clothing, period furniture, etc. Some of us OTs have our hands full on the reflectors keeping them out of trouble. Forexample, more than a few don't realize that the power ratings on older rigs are*DC input*, not RF output.

> The licensed operator was necessary through the 1970s. Today, speaking
> strictly from the standpoint of avoiding ruinous interference to
> economically-important services, my argument is that that's no longer
> the case.

If we were all using certified, no-user-adjustment equipment that all ahd built-in protection against all sorts of troubles, maybe. But that's not Amateur Radio today, and hopefully never will be.

While HF may be "old-school" to some, consider that any class of US amateur except Novice has full priveleges above 30 MHz - includingthe operation of high power transmitters on frequencies close to public-safety services. So I think the need continues today.

> (there may be other reasons for maintaining the licensing requirement
> -- to prevent the amateur service from being hijacked into a different

> less than half KYW's numbers.

KYW is a special case. Almost nobody listens to KYW continuously. What people do is to push the 1060 button for a specific purpose (trafficon the Schuylkill, weather, school closings, DJIA numbers, etc.) KYW's format is structured so that you know when to listen ("traffic on the twos")

That sort of programming is quite different from the kind of radio
people listen to for considerable lengths of time, such as WHYY's
"Fresh Air"

> (not that WHYY did badly -- they beat
> three high-powered commer cial FMs and Philadelphia's other 50,000-watt
> AM station, and if they didn't have to split the public radio audience

WHYY also competes with public radio station WXPN. There's also WLEV to
the north.

> exams!

Agreed! But I've encountered folks who would like to see the
requirements for an amateur license reduced far below what they are
today. Somewould even remove the ability of some hams to homebrew and
use older rigs.

For an example, google "Amateur Radio In the 21st Century" and/or look
at the second NCVEC restructuring proposal. (I'll post links ifanybody
is interested).

In my experience the cb linears were anything but, and were often the
direct cause. Low pass filter? What's that?

> idea how a vac uum tube works (and would find it impossible to pass the
> 1940 exam) while no EE graduate in 1940 had ever heard of a transistor.
> (and would find it i mpossible to pass the 2010 exam)

Couple of points:

1) There's nothing on the exams, old or new, that's even close to
EElevel. All of the stuff required for all three current exams would
amount to maybe one EE level course. An introductory course at that.

2) Tube and transistor theory aren't showstoppers; the number
ofquestions related to them has always been rather small. IMHO there
were more ofthem in the past...

3) While a 1940 EE graduate would not understand what a transistorwas,
and many 2010 EE graduates wouldn't know what a tube is, if youshowed
them the devices and explained their characteristics, they'd be ableto
get right answers on all the amateur exam questions involving them in
very short order. If anything, the 2010 graduates would have more to
learnthan the 1940 ones!

4) It's not really about "easy" vs. 'hard" but about how much
thelicensee winds up actually knowing. I think that it's quite possible
for a newamateur to pass all the license exams yet be hampered by lack
of basicknowledge about Amateur Radio to such an extent that they don't
even get on theair, or are severely limited in what they do.

True, but you don't need to get them all right. All you need is 75%.
While random guessing won't get someone a license, it can help a person
with big gaping holes in their knowledge pass.

> You could argue that essay questions in part test the wrong skill -
> your ability to cause someone else to understand the concept, not your
> understanding of the concept itself.

But how can a person be able to cause someone else to understand a concept they don't understand themselves? Particularly when the exact question isn't known beforehand?

The old exams weren't all essays, either; they included draw-a-diagram questions, show-your-work calculations, and multiple choice.

Historic trivia: About 1940 the FCC went to all-multiple-choice examsas a way of conserving resources at exam sites. Sometime during WW2 they went back to the old system, which continued until about 1960.

> Let me make it clear, I'm not trying to argue that we shouldn't have

I don't know what FCC thinks on the subject. I do know that FCC has repeatedly refused all proposals to give free no-exam upgrades, and all proposals to eliminate the Extra class.

> I think there are two keys to effective exams: - The largest possible

>
No matter how big you make the pools, *somebody* will probably be able to memorize them well enough to pass without any understanding. But that doesn't really matter, because there comes a point where, if the pools are big enough, it's easier for most people to just learn theconcepts.

Careful selection of multiple-choice answers is a good idea, but hasto be done in such a way as to avoid other problems.

For example, consider the classic "how long is a 40 meter half-wavedipole made of #12 wire and cut for the middle of the band"?

Here's one set of answers:

1) 66 feet2) 132 feet3) 43 feet4) 18 feet

And here's another:

1) 66 feet2) 67 feet3) 68 feet4) 65 feet

Which one really tests understanding of the concepts?

The real kick for the modes was the sound card operations. What once took a good bit of space and effort, is now done with a computer and some software.

It never fails to amaze me when I think about my station laptop having so much ability. There seems to be about a bazillion digital modes now, and SSTV rtty and the other legacy modes.

In fact I'd say the biggest drawback is that to use the soundcard modes is simple enough that it can impede the appreciation of the power.

For instance, I used Ham Radio Deluxe and Digital Master 780 on my laptop.

Let's say I'm doing some PSK on 20 meters. I see a fellow operating Olivia mode a little up from me on the bandscope. I switch to his mode, and the software detects his callsign, I tell it I want to do a QSO with him, and the computer looks up and displays it in the "pre-log" window. Then it goes out to QRZ.com, and looks up the Op's information. We type out our QSO, and maybe do a little rag chewing. After we sign, my computer uploads the QSO info to eQSL.

All that time, I've been monitoring the DX clusters, have a grayline display and complete control of the rig from my laptop (I do have a second display because that is a lot of stuff for one screen!

That's easy to spoil a person that way.

Then again, sometimes it's fun to power up an old hollow state
Heathkit.

I just don't think there would be that much purpose to tube technology
in a modern day test. That to me seems more of a thing that you learn
as part of a niche you find to your liking.

> But it's a moot point. The FCC is extremely unlikely to change from the

> QPC for inclusion in the pools. And there's no upper limit to the pool
> size.

First you define what you want to do. There are many possibilities.

Some want to make things easier, some want to make things more
difficult.

Much of this is coupled to how people see the tests in the first
place. If we want to make them more difficult in order to serve as a
sort of filtering mechanism, we can put in questions that involve a
lot of calculations, then move the decimal points around or make them
very close.

I'd never suggest this, but I took a test once that was incredibly
ambiguous. One question was multiple choice "What temperature does
solder melt at?"

But in the end, I like the idea of an easy starting point, then
becoming more difficult as you move up. I think that in a historical
context, we're doing what we have been doing for a long time now.

> Of course a question that requires differential calculus to solve
> probably isn't going to be accepted. Nor is one that focuses on
> technologies not used much in Amateur Radio. But a lot can be added.

I'm of the opinion that the tests are not far from where they should
be. I wouldn't mind the Extra being more difficult, but that's because

I had a lot of fun studying for mine.

Why not?

When the VEC system was created, they didn't start the question pools
from scratch. They just took the existing exams and expanded the number
of possible questions.

Some things haven't changed (40 meters in the USA has been 7.0 to 7.3
since 1929) so why rewrite the questions?

> Looking over the
> questions, the Novice was amazingly easy, and the General would have
> required me to spend an afternoon studying about tube circuits. No

The Novice was intended to be amazingly easy.

Remember that in 1957 the Novice conveyed very limited privileges
(small parts of 80, 40 and 15 CW, plus half of 2 meters, voice or CW.
75 watts input, crystal controlonly.)

More important, a 1957 Novice license was only good for a year, could
not be renewed, and was a once-in-a-lifetime grant. Once a person's
Novice expired, they could not get another one, and it was upgrade or
leave ham radio.

The result was that most Novices were quite motivated...

> So yeah,
> they weren't the questions on the official exam, but I can't help
> think the books were put out with a very good idea of what the
> questions would be.

Of course. But there's a very big difference in having a study guide
that indicates the general areas that will be on the test, and one that
shows the exact questions and answers that will be used.

Remember too that in 1957 the FCC was still using essays,
draw-a-diagram and show-your-work calculation questions on the exams
for all license classes except Novice.

> So, I believe that the answers have been out there for a lot longer
> than F.C.C. question pools, Bash books and all the other examples of

Sure. But there's a big difference between knowing the answers are
outthere, and knowing exactly what the questions will be.

> So what is the discrepancy? I think that we sometimes forget that we

> much they've learned in the intervening years.

Yup. Or how little they knew back-when.....

I think another factor is the difficulty-of-access part. Some mayscoff
at this, but it was a real issue in the bad old days.

What I mean is that, when FCC did the exams at FCC offices, just
getting to an exam session could be more involved than the actualtest.

For those of us near big cities that had FCC offices, travel was no big
deal, but for a hams further out it could be a serious journey.
Particularly after FCC increased the "Conditional distance" from 75 to
175 miles in 1964 or 65. FCC exams were usually only given on weekday
mornings, too.

If you failed an exam, you had to wait 30 days to retest.

No CSCEs; if a license required both code and written exams, you had to
pass them all at the same test session. The General class ham trying to
upgrade to Extra would have to pass 20 wpm receiving, 20 wpm sending,
the Advanced written and the Extra written all at the same session.

There was also a time when FCC charged fees for the tests. Adjusted for
inflation, the fees could be substantial. $9 in the 1960s equatesto
about $50 today.

For a working people, such limits to access could mean taking a day off
work and significant travel time and expense. For a kid in school, such
as I was, it meant waiting for an exam day in the summer or on a school
holiday that wasn't a federal holiday.

What all this added up to was a real incentive not to fail, because
retesting was such a bother. So many hams would overlearn the material
in order to be absolutely certain of passing on the first go. Very few
would go to an exam session just to see if they could do it; the costs
were too high.

What the old system also did was to make it very difficult for those
who had various forms of "test anxiety" which often had nothing to do
with their knowledge of the material and everything to do with the cost
of getting to the exam session.

To many hams of those days, the exams probably seemed a lot "harder" than they really were, because of the pressure. I think it's a very good thing that the VE system has eliminated or reduced those problems.

At the same time, I think it's important to recognize the differences and how things have changed.

I'd feel competent to grade them. But that's not the issue.

> Grading
> of essay questions is necessarily subjective, not objective.

That's the issue.

With multiple choice, there's one right answer for each question and
all the rest are wrong. No knowledge of the subject is needed to grade
such a test.

> I do like the idea of negative points for wrong answers. But, that's

Why?

All that negative points do is to remove any possible gain
fromguessing.

The way the multiple-choice questions (5 choices for each) on the SATs
were graded (back in the ancient times when I took them) wasthis:

5 points for each right answer -1 point for each wrong answer 0 points
for each answer left blank.

> And any changes in this would have to
> be approved by the FCC in Part 97.503.

Which would be the hardest part.

> But they could do more in the concepts of things like Fourier analysis

Me too. Plus real-life tends to be open-book; you check to be sure.

> The basic
> concepts can be understood, at a qualitative level, by simple diagrams
> and hand-waving.

One of the things that ARRL publications do really well is to explain
the concepts without tons of math and physics. Particularly the older
Handbooks and the treasured "Understanding Amateur Radio" book.
Simplified? Yes. Useful? Extremely!

OK, that's different. I was envisioning subtracting the number of
wrong answers from the number of right answers. If a wrong answer
counted a negative 1/5 of a right answer, then the passing threshold
could stay the same.

But then the VE's would have to do a bit more math. Either multiply
the right answers by 5, or deal with fractions.

>> I have a Masters degree in Electrical Engineering, so in
>> college I studied all kinds of complicated equations dealing with

In my college, the Math and Pysics departments used closed-book exams.
The EE department used open-book exams: the prof would say: "You can
bring with you to the exam anything except another sentient being."

> But then the VE's would have to do a bit more math. Either multi
ply
> the right answers by 5, or deal with fractions.

The math is pretty simple.

Since the questions are all 4 choice, it would work like this:

For all exams, you get 4 points for a correct answer, -1 point for a
wrong answer and 0 points for no answer.

Each exam would require a certain minimum number of points to pass. If
my math is right, the 35 question exams would require 104 points to
pass, 50 question exams would require 148 points to pass.

> In my college, the Math and Pysics departments used closed-book exams.
> The EE department used open-book exams: the prof would say: "You can
> bring with you to the exam anything except another sentient being."
>
In my EE undergrad school, all the lower-level exams were closed book
but as things progressed they became open book or test-free (based on
homeworks and projects).

In EE grad school, tests became even less important and projects/
homeworks more important. One course series involved doing
presentations in front of the class, with questions from both the prof
and the other students.

Formulas were the least of it.

I forget if I told the story of Professor W. here, but sometimes the
lessons weren't immediately apparent in those classes...

73 de Jim, N2EY

199. ARRL Nebraska State Convention

Newsgroup: rec.radio.amateur.moderated
Date: 2010-02-11 14:39:41 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100211140002.42DEE20856@bmail.arrl.org>
Source record: 1621
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,nebr.misc,rec.radio.info

Join us at the ARRL Nebraska State Convention -- End of Winter Hamfest
on March 20, 2010. Among the featured speakers are Bob Allison,
WB1GCM, from ARRL HQ giving us a look at the ARRL Lab and how it works
and the ARRL Midwest Division Director, Cliff Ahrens, K&#65533;CA, who will be
bringing us up to date happenings at ARRL HQ and within the Division.

This looks like a great event. There will be lots of hams to talk with,
lots of equipment to look at, and plenty of interesting presentations.

The Convention is being held at the Lancaster Event Center located at
84th and Havelock in Lincoln. For more information, please visit the
hamfest website: http://www.lincolnhamfest.org. You can also download
a flyer describing the event at
http://www.ctwsoft.com/hamfest/2010_LARC_Conv_Flyer.pdf.

I'll look forward to seeing you there!

73, Art K&#65533;AIZ

ARRL Nebraska Section
Section Manager: Arthur I. Zygielbaum, K0AIZ

==> ON-THE-AIR : GET READY FOR THE ARRL DX CW CONTEST

The weekend of February 20-21 will be a busy one for CW operators as
the 2010 ARRL DX CW Contest takes center stage. First started in 1929
as the ARRL International Relay Party, the ARRL DX CW contest lays
claim to the longest running contest in Amateur Radio. Stations from
all around the world -- from Australia to Zimbabwe -- should be active
for this great event that takes place on 160-10 meters (contest QSOs
are not permitted on 60, 30, 17 or 12 meters). Read more here
<http://www.arrl.org/news/stories/2010/02/09/11334/?nc=1>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL
Field Day, June 26-27, 2010! ARRL's flagship operating event -- always
held the fourth full weekend in June -- brings together new and
experienced hams for 24 hours of operating fun. Field Day packets are
now available for download
<http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the
complete rules (including changes for 2010), as well as other reference
items such as forms, ARRL Section abbreviation list, entry submission
instructions, a Frequently Asked Questions section, guidelines for
```

getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> EYE ON AWARDS : THE IARU REGION 2 AWARD

In October 2009, IARU <http://www.iaru.org/> Region 2 <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf> announced a new award -- the IARU Region 2 Award <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf#pdf> -- available to amateurs and shortwave listeners who submit confirmed QSLs with 20 Region 2 countries or entities. To be considered for the award, contacts must have been made after April 16, 1964 -- the date when IARU Region 2 was founded. Read more here <http://www.arrl.org/news/stories/2010/02/11/11335/?nc=1>.

==> HINTS AND KINKS: UNISTRUT ANTENNA SUPPORT

This idea comes to us from Louis Kobet, WB3DZD, of Camas, Washington.

When considering a center support for the installation of an inverted V antenna I decided on the following requirements: a strong material, easy assembly, corrosion resistant and with tilt-over capability. The initial design was to use several 10-12 foot sections of antenna mast or 2 inch galvanized pipe coupled together. Due to the cost of antenna mast and galvanized pipe being more than anticipated, an alternative, 10 foot sections of 1-5/8 inch Unistrut channel was selected.

Figure 1: The PVC pipe and hoist pulley device mounted to the top of the Unistrut for hoisting the antenna. Unistrut is a ham's Tinkertoy. It is available in 13/16, 1 1/4 and 1-5/8 inch widths, 10 and 20 foot lengths and in 12, 14 and 16 gauge sizes. It is made with dipped surface protective treatments from electro-deposition acrylic green to "hot dipped" galvanized coatings and multiple channel designs (including telescoping sections). A vast selection of brackets and fasteners is available and it is continuously slotted for easy guying. The design and choices for project use are limited only by the creativity of the user.

The tilt over base support consisted of a treated 4Ã□4 inch landscape post anchored in concrete. (The wooden post was moisture sealed at the top using the dipped coating used for hand tools and along the length with several coats of wood sealer.) The Unistrut mast pivot point on the support base was a 3 inch lag bolt about 50 inches above ground. In retrospect, a section of Unistrut could have been set in the concrete as the antenna base support.

The Unistrut mast preparation consisted of black paint (except for areas where the sections were bolted together) and the addition of a hoisting pulley mounted at the end of a 2 foot PVC pipe (see Figure 1). One problem encountered was in bolting the Unistrut together. Bolting back-to-back against the base of the "U" was not possible because I couldn't get a socket on the bolt head inside the Unistrut channel. To get around this the Unistrut was bolted with the open "U" ends face to

face. Square Unistrut channel would have eliminated this issue. The three Unistrut sections were bolted together with about a 12 inch overlap.

An antenna hoisting line was fed through the pulley and mast section carried to the base support for mounting. After attaching the mast to the pivot point it was tilted up into position, plumbed and secured in place with three additional lag bolts.

The V antenna was spread out, transmission cable attached and hoisted to the top of the mast. The ends of the V antenna were attached to a 12 foot landscape treated 4Ã□4 that was secured to the property fence.

Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint in QST, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address.

==> LEGISLATIVE HAPPENINGS: MORE COSPONSORS ON BOARD FOR HR 2160

<http://www.arrl.org/news/stories/2009/05/12/10818> Last month, another Congressional Representative -- Jo Bonner (R-AL-1) -- pledged his support for HR 2160 <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>, The Amateur Radio Emergency Communications Enhancement Act of 2009, bringing the total number of cosponsors to 34, including original sponsor Sheila Jackson-Lee <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1> (D-TX-18). HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), John Boozman (R-AR-3), Madeleine Bordallo (D-Guam), Andre Carson (D-IN-7), Geoff Davis (R-KY-4), Bob Filner (D-CA-51), Scott Garrett (R-NJ-5), Bart Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey (D-NY-22), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Tom Latham (R-IA-4), Zoe Lofgren (D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Charlie Melancon (D-LA-3), Candice Miller (R-MI-10), Dennis Moore (D-KS-3), John Olver (D-MA-1), Bill Posey (R-FL-15), Dana Rohrabacher (R-CA-46), Bennie Thompson (D-MS-2), Michael Turner (R-OH-3), Peter Welch (D-VT), David Wu (D-OR-1), C.W. Bill Young (R-FL-10) and Don Young (R-AK). Click here <http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional Representative to sponsor HR 2160.

==> PIO NEWS : THE FEBRUARY ISSUE OF CONTACT! NOW ONLINE

<http://www.arrl.org/pio/contact/> The ARRL is committed to public relations and has built a national PR program designed to represent Amateur Radio to government, the media and the public. The Newington Headquarters' national effort is supported -- and greatly enhanced -- by ARRL public information appointees and other interested volunteers who work to promote Amateur Radio on the local level. One of the tools to help these volunteers is CONTACT <http://www.arrl.org/pio/contact/2010/02/>, the monthly online newsletter designed to be a resource for ARRL Public Information Coordinators (PIC <http://www.arrl.org/FandES/field/org/pic.html>), Public Information Officers (PIO <http://www.arrl.org/FandES/field/org/pio.html>) and anyone with an interest in Amateur Radio public or media relations activities. Each issue contains helpful articles and tips to help spread the good word about Amateur Radio.

The February issue of CONTACT was released earlier this week and is full of information that you can use. With Field Day approaching, how are you going to publicize your club's participation in the largest operating event in the world? Find out what some hams will be doing combine Field Day with other events happening in their communities. Speaking of Field Day, find out how your club can earn 500 bonus points. Learn how a club in New Zealand got people who had no electronics experience excited about Amateur Radio. There's more information in the February issue of CONTACT. You can read it -- as well as other materials prepared specifically to promote Amateur Radio -- on the PIO Web page <http://www.arrl.org/pio/>.

==> NEW ARRL WEB SITE COMING SOON

After more than two years of planning, designing and writing, we here at the ARRL are eagerly anticipating the launch of the new ARRL Web site. We've been able to make the online experience easier for our members -- from the online store, to registering for a class, to finding a club -- plus we've created a new, enhanced member profile with many more options available. We've made improvements with you in mind, making sure that we've created the easiest, most enjoyable online experience possible. The new Web site will be available at the end of February.

==> ITU NEWS: ITU DIGITIZES HISTORICAL ARCHIVES

The International Telecommunication Union (ITU <http://www.itu.int/>) announced <http://www.itu.int/newsroom/press_releases/2010/CM02.html> on February 11 that they have launched the History of ITU portal <http://www.itu.int/history>. This program -- the digitizing of the ITU's archive of historical documents -- aims to improve access to information on the ITU and chart its evolution since its establishment in 1865, while ensuring the long-term preservation of historic documents. The archives will be freely accessible. ITU's Historical Documents Digitization Program is an ongoing project to catalogue and scan key ITU documents and outcomes of major conferences and make them

available on the web. Optical character recognition (OCR <http://en.wikipedia.org/wiki/Optical_character_recognition>) allows the documents to be fully searchable. Documents generated from ITU Plenipotentiary Conferences -- as well as from early radio, telegraph and telephone conferences -- are now available on the portal. The portal provides background information, key data and links to the documents and other materials for each conference. The digitization program will continue to make available documents of historic significance, including those related to Radiocommunication Conferences since 1903.

==> SILENT KEY: HERBERT "PETE" HOOVER III, W6ZH (SK)

Herbert "Pete" Hoover III, W6ZH (ex-W6APW) -- the grandson of Herbert Hoover, the 31st President of the United States, and the son of former IARU and ARRL President Herbert Hoover Jr, W6ZH (SK) -- passed away <http://www.legacy.com/obituaries/latimes/obituary.aspx?n=herbert-hoover-pete&pid=139549574> February 4, 2010. He was 82. A resident of San Marino, California, Hoover was active in ARRL activities, serving as a Director of the ARRL Foundation <http://www.arrlf.org/> in 1976 and as a member of the ARRL Long Range Planning Committee from 1978-1981. In the 1970s, Hoover, along with EIMAC's Bill Eitel, W6UF (SK), established a matching fund to encourage contributions to the amateur satellite program. Hoover served as Vice President and Trustee of the Pasadena (California) Radio Club and was also a member and former President of the Southern California DX Club. In 1978, he was elected to the National Red Cross (later the American Red Cross) Board of Governors. A memorial service is being planned. Donations may be made to Doheney Eye Institute, 1490 San Pablo St, Los Angeles, CA 90033; Hoover Institution, 434 Galvez Mall, Stanford University, Stanford, CA 94305-6010; Herbert Hoover Presidential Library Association, 302 Parkside Dr, West Branch, IA 52358 or the House Ear Institute, 2100 W 3rd St, Los Angeles, CA 90057.

==> SILENT KEY: CHRIS WALTERS, N0HVK, KILLED IN CONNECTICUT EXPLOSION

Chris Walters, N0HVK, of Florissant, Missouri, was killed in an explosion <http://www.nbcconnecticut.com/news/Widow-Mourns-Husband-Killed-in-Plant-Blast-83855942.html> on Sunday, February 7. He was 48. Walters -- who was employed as a safety manager for an electrical subcontractor at the Kleen Energy Plant in Middletown, Connecticut -- was one of five men killed in the explosion; at least a dozen were injured. The accident received national news coverage. According to officials, the plant was in the process of doing a "blow down" -- clearing the natural gas lines -- when the explosion occurred, but investigators are still determining the cause of the explosion. According to his wife, Fran, Walters was unemployed in Missouri and had been in Connecticut for two months working a temporary job. While in Connecticut, Walters found time to

enjoy Amateur Radio activities. He was a member of the Shore Point Amateur Radio Club (SPARC <http://sparc.us/sparc.htm>), volunteering for community events and fundraisers with the club; he was also part of SPARC's first ARRL Field Day. Connecticut Governor M. Jodi Rell requested that flags fly at half-staff on February 10 in honor and memory of the five men who perished in the explosion. -- Some information provided by WVIT and SPARC

==> SOLAR UPDATE

Tad "Light breaks where no Sun shines <http://www.poemhunter.com/poem/light-breaks-where-no-sun-shines/>" Cook, K7RA, reports: The increasing sunspot activity continues, and images from NASA's STEREO mission <http://stereo.gsfc.nasa.gov/> show a string of active regions in the Sun's northern hemisphere -- both visible and over the horizon on the far side. The high sunspot number for the week was 71 on February 8; the average for the week was 43.3. We haven't reported a weekly average that high since the week of March 27-April 4 in 2008 when it was 43.6. The daily sunspot number hasn't been as high as 71 since May 28, 2006 when it was 78. The earlier reading that reached that level or more was 105 on April 6, 2006. On February 8 -- when the daily sunspot number was 71 -- the total area covered by sunspot activity was 460 millionths of a solar hemisphere. That number hasn't been as high since the same earlier week in 2008 that had a high sunspot number average. The dates were March 26-27 when the area of sunspots was 520 and 510. Look for more information on the ARRL Web site on Friday, February 12. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Dylan Thomas' Light Breaks Where No Sun Shines <http://www.poemhunter.com/poem/light-breaks-where-no-sun-shines/>.

==> THIS WEEK ON THE RADIO

This week, the NCCC Sprint Ladder is February 12. The YLRL YL-OM Contest is February 12-14 and the FISTS Winter Sprint is February 13. On February 13-14, be sure to check out the CQWW RTTY WPX Contest, the KCJ Topband Contest, the Louisiana QSO Party and the OMISS QSO Party. The North American Sprint (SSB) and the SKCC Weekend Sprint are both February 14. The Classic Exchange (Phone) is February 15 and the AGCW Semi-Automatic Key Evening is February 17. Next week, the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2010/intldx.html> is February 20-21. There is another NCCC Sprint Ladder on February 19. The Feld Hell Sprint is February 20, the Run for the Bacon QRP Contest is February 22 and the SKCC Sprint is February 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1696 - February 12, 2010

Please note that this is an extended amateur radio Newsline report with three breaks and a total running time of 34 minutes. Newscast begins rightnow.

**

Amateur Radio Newsline report number 1696 with a release date of Friday, February 12th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio relief communications continue in Haiti, a UK publisher gives financial support to the RSGB's fight against BPL, a major sunspot appears on the surface of the solar disc, a radio prank brings a $16,000 fine and a teen finds a way to send radio waves through solid rock. Find out the details on Amateur Radio Newsline(tm) report number 1696 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIOS ROLL EXPANDING IN HAITI

Amateur radio's effort to assist in earthquake ravaged Haiti continues to expand. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

The role being played by radio amateurs in post quake relief efforts is far from over. This with word through the ARRL that Doug Lapin, K1OY, and the Dominican Radio Club's team were to returned there earlier this past week to install another repeater which will serve as a major upgrade to the system.

There are two fixed sites at the Dominican Embassy and the UN Logistics Base. The system is used primarily by the Dominican Red Cross. Lapin and the Dominican group were to be in Haiti for two days and hoped come back the following week to upgrade the power plant.

Lapin says that he attended a recent United Nations weekly status meeting where was deluged with requests by the UN and others to use the network. He notes that there are still severe communications problems in Haiti, especially as more aid organizations get organized.

Meantime, Julio Ripoll, WD4R, reports that the University of Miami Hospital's Amateur Radio teams have been very busy passing messages

between
Florida the hospital ship Comfort and around the airport in Haiti. He notes that the University of Miami Hospital's hams have also been put to work repairing radio and medical equipment for other relief groups.

Ripoll says that landline communications are still down and that cell phone service is "only about 80%. And says Ripoll, the latter is only in the immediate area of Haiti's main airport.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

With Haiti's communications infrastructure still in a state of disarray, it appears that ham radio will play an important role in rescue radio efforts for months to come. (ARRL)

**

RESCUE RADIO: MARS UNITS TO SHARE HAITI RESPONSIIBILITY

Meantime, to assist the MARS communications support effort in earthquake relief to Haiti, the heads of Army, Air Force, and Navy-Marine Corps MARS have agreed to divvy up responsibilities among the three MARS programs. In a report carried by the ARRL, Air Force MARS Public Information Officer David Trachtenberg, N4WWL, said that the delegation of responsibility will facilitate more efficient utilization of MARS communications assets in the overall relief operation. The January 12th earthquake wiped out the island nation's communications infrastructure. (MARS Release)

**

RESCUE RADIO: A LIST OF NATIVE HAITIAN HAMS

A partial list of hams believed to have been active from Haiti prior to the January earthquake has surfaced. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the calls to listen for:

--

According to a posting from KC8VWM, the following stations represent "known" Haitian nationals who are hams who have been operating stations in Haiti in the past year or so. They are HH2AW, HH2DMJ, HH2DZ, HH2GM. HH2FJM, HH2JR, HH5HK, HH3AR, HH6JH, HH2B and HH2LX.

There may be others but if there are they have not been heard on the air in a long time. Charles adds that some of these call signs may have expired and some hams may have relocated to other countries. Also, latest reports indicate none of these stations listed in Haiti have been contacted.

I'm Don Wilbanks, AE5DW, near New Orleans.

--

At airtime nothing more is known about the health and welfare of anyone on this list. (KC8VWM via Internet)

**

RESCUE RADIO: ETOW TO SEND WIND UP RADIOS TO HAITI

In other Haiti earthquake relief news, some free radios are on their way to Haiti to help the general public know more about humanitarian efforts coming their way. Jim Damron, N8TMW, has the details:

--

The humanitarian organization Ears to our World has launched an initiative to distribute a substantial number of Eton Corporation-donated radios to individuals in remote and impoverished areas of that nation. These are wind-up generator powered radios which also have a built-in flashlight.

The group believes that the radios could provide life-saving medical and food/water supply information to families and communities.

The organization is currently raising funds to help pay the expedited shipping costs and perhaps allocate even more radios for a future shipment.

I'm Jim Damron, N8TMW.

--

The initial shipment of over 100 of these self-powered radios was to be sent to Haiti this last week. (Southgate)

**

THE BPL WAR: UK PUBLISHER DONATES TO RSGB ANTI BPL FIGHT

PW Publishing, the company that owns United Kingdom magazines Practical Wireless and RadioUser, has joined the BPL fight. This as it becomes the first corporate donor to the Radio Society of Great Britain's Spectrum Defense Fund. The company has also generously given the RSGB advertising space throughout the year to highlight the problems of Broadband over Power Line interference. (GB2RS)

**

PROPAGATION: A BIG SUNSPOT AT LAST

A possible turning point in the High Frequency propagation doldrums. This as Spaceweather dot com reports the sudden emergence of sunspot 1045 which in turn has caused a sharp increase in solar activity.

The active region appeared on Saturday, February 6th. By mid-week it had produced three M-class and almost a dozen C-class solar flares. The strongest blast, an M6-class eruption on February 7th, may have hurled a coronal mass ejection toward Earth.

Whether or not sunspot 1045 is a precursor to ongoing improved solar activity or just a one-time occurrence remains to be seen. Sample sounds

and images may be found at spaceweather.com. (Spaceweather)

**

RADIO HONORS: ARRL ANNOUNCES LEONARD AWARD WINNERS

Three people have been named as recipients of the ARRL's 2009 Bill Leonard W2SKE, Professional Media Award. First up in the audio category is radio host Ted Randall, WB8PUM of the weekly QSO Radio Show. The ARRL Board of Directors recognized that Randall's show has become even more effective as a podcast of consistently high quality in its treatment of issues within amateur radio week after week. Ted was the recipient of this award in 2008, as well.

In the area of video the award was given to reporter Kim Byrnes of Kansas City television station WDAF. She covered the Raytown Amateur Radio Club's 2009 Field Day operation for her station's Sunday morning news magazine. Byrnes also provided reports on the diverse aspects of amateur radio, specifically highlighting ham radio as a hobby, as an emergency communications service, and as a radiosport. She also chronicled the evolution of two-way radio technology with what the Board called a fascinating video report.

Lastly, the print journalism award was given to Vicky Taylor who is a reporter for the Chambersburg, Pennsylvania, newspaper Public Opinion. She was honored for her coverage of the licensing of 8 year old Victoria Latham, KB3SSM, and her 7 year old sister Veronica, KB3SSN. This was the heartwarming story of how these two pre-teens convinced their dad Shannon, W3SML, and mom Rachel, KB3RNP, that they were ready to get their ham tickets. (ARRL)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7VGS repeater serving Star Valley, Wyoming.

(5 sec pause here)

**

ENFORCEMENT: RADIO PRANK LEADS TO $16000 FINE

A New York radio station that played what has been described as a distasteful radio prank on a listener has been issued a proposed fine of $16,000 by the FCC. But it's not what was said that got the station in trouble, but the way it tried to circumvent the FCC rules that say a person being recorded during a call must be advised before the station rolls tape. Amateur Radio Newsline's Bruce Tennant, K6PZW picks up the story from here:

--

In its Notice of Apparent Liability for Forfeiture against WSKQ Licensing, Inc. the regulatory agency says it is proposing to assess this $16,000 fine because of WSKQ's apparent willful and repeated violation of Section 73.1206 of the Commission's Rules. This by broadcasting a telephone conversation without giving prior notice to the individual being called of its intention to do so.

On August 23, 2007 the FCC's Enforcement Bureau received a complaint alleging that a station employee made a call to a woman claiming to be an employee of a local hospital. The caller told the recipient of the call that her husband had been seriously injured in a motorcycle accident and that he died at the hospital. The complaint also alleged that the call recipient became distraught when she received this information. Thereafter, the Station employee informed her that the call was a nothing more than a joke.

Based on the complaint the FCC issued a letter of inquiry to WSKQ Licensing on September 25, 2008. In its response WSKQ Licensing stated that its parent company, Spanish Broadcasting System, Inc., contracted with a vendor, Rubin Ithier, who recorded the call for a prank call feature show. It admitted that Ithier initiated the call broadcast by the station. It went on to claim that the call was made at the call recipient's husband's request, and that Ithier performed the prank.

WSKQ Licensing did admit that Rubin Ithier did not inform the call recipient that the call was being recorded for later broadcast until after the call had been recorded and played over the air. The licensee provided a transcript of the program, the content of which confirmed that the call recipient was not given notice prior to the call being recorded that it was being recorded for future broadcast. The licensee also admitted that the Station broadcast the call twice on August 23, 2007.

WSKQ Licensing also included a recording and transcript of the broadcast. We have read it and find it far to distasteful to repeat. I does however indicate that the prank call recipient hung up the phone when she learned that the call was a prank. Also that Rubin Ithier telephoned her again to obtain her permission to broadcast the call.

In its February 4th decision to issue the proposed fine the FCC did not touch on the content of the prank call. Rather its concern was the fact that the call was recorded and replayed without the consent of the recipient. As such, the FCC says that based on the preponderance of the evidence, that the person who made the prank call willfully or repeatedly violated the Communications Act or a Commission rule. As such the FCC concluded under the procedure that WSKQ Licensing used in producing this broadcast that it is apparently liable for the willful and repeated violation of Section 73.1206 and liable for a $16,000 fine.

For the Amateur Radio Newsline, I'm Bruce TennantK K6PZW, in Los Angeles.

--

As is customary, the FCC has given the station's owners 30 days to pay the $16,000 fine or file an appeal. (FCC)

RADIO LAW: CODIFYING THE VANITY CALL SIGN RULES

The FCC is in the process of making permanent the rules governing the Vanity call sign program. As regular listeners are aware, late last year, the FCC issued a Notice of Proposed Rule Making titled WT Docket 09-209 that seeks to amend the Commission's Amateur Radio Service rules. This, to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations.

Now, interested parties may make comments on this Notice of Proposed Rule Making via the Federal eRulemaking portal or the FCC's own website. Comments must be submitted by March 26, 2010 with reply comments due no later than April 12, 2010. The URL's to use are http://www.regulations.gov/search/Regs/home.html#home, or via the FCC's Web site at http://fjallfoss.fcc.gov/ecfs/. (ARRL, FCC)

**

RADIO LAW: FCC CLOSES CABLE SYSYEM PROGRAMMING LOOPHOLE

Cable TV companies will no longer be able to use a federal loophole to withhold sports networks and other popular programming they own from satellite providers and other rivals. This after the Federal Communications Commission voted 4-to-1 on Wednesday, January 20th to close the so-called terrestrial loophole that was written into a 1992 federal cable regulation law.

Under that legislation a cable TV provider must let competitors carry any channel it owns if satellite connections are used to transmit the channel to the individual cable systems around the country. Until now, the provision didn't apply when cable operators sent programming over land-based networks instead. As a result cable companies have been using the loophole to withhold sports and other programming from competing services. Now that the quirk in the law is gone, satellite and phone-line television providers are calling it a big win for consumers and fair competition in the marketplace. (Published reports)

RADIO ACCIDENTS: PHOTOS OF THE KWRM TOWER THAT SNAPPED IN HALF

High winds may be to blame for the recent toppling of an AM radio station tower out in Corona, California.

One person speculates that a gust in excess of 100 MPH during a tornado watch may have been involved. This, since the KWRM towers have withstood very high winds in the past.

The station is currently investigating to determine the exact cause of the structure's failure. Photos of the felled tower can be seen at the http://earthsignals.com/add_CGC/Images/KWRN_tower_down.html (CGC)

NAMES IN THE NEWS: KQ6FM NEW RADIO SHOW IN MONTEREY CALIFORNIA

And as most of you know, many of the voices you hear on Amateur Radio Newsline have professional careers as news reporters and voice over talent. Some even have their own radio shows and that includes our own Don Carlson. KQ6FM.

Thanks to the magic of modern digital communications, Don has just begun a new gig at a new radio station in Monterey, California known as Z-97.9 FM. What's so neat about this is that Don does the show from the comfort of his own studio in Reno, Nevada. Its then sent digitally to Monterey where the voice of Don as D-J Don Murray is heard playing the greatest hits of the 60's and 70's over Z97.9 from 10 in the morning until 2 PM in the afternoon, local Pacific time.

You can read more about Don the radio air personality and his new job at http://www.z979fm.com/The-DJ-s/5304063 (ARNewsline(tm))

THE SOCIAL SCENE: INTERNATIONAL DX CONVENTION IN APRIL IN CALIFORNIA

Turning to the ham radio social scene, the 61st Annual International DX Convention sponsored by the Southern California DX Club will be held April 16th to the 18th at the Holiday Inn Hotel and Conference Center, in Visalia, California. This is the premiere DX gathering in the world with top names from around the world in attendance. More information is on-line at www.dxconvention.org (IDXC)

**

THE SOCIAL SCENE: HEIL SOUND TO AGAIN HOST HAM RADIO RECEPTION AT NAB

Heil Sound Limited and BSW will again co-host the annual Amateur Radio Reception at the 2010 National Association of Broadcasters Convention to be held this spring in Las Vegas, Nevada. The event is slated for Wednesday, April 14th from 6 to 8 PM Pacific time at the Hilton Las Vegas Convention Center Hotel. The hotel is right next door to the Convention Center. Just bring your NAB badge to get in.

Again that's Wednesday, April 14th from 6 to 8 PM Pacific time at the Hilton Las Vegas Convention Center Hotel for the 2010 Amateur Radio Reception co-hosted by Heil Sound Limited and BSW. We hope to see some of you there. (Heil Sound via Facebook)

THE CHANGING OF THE GUARD: FORMER ARRL FOUNDATION DIRECTOR PETE HOOVER, W6ZH - S.K.

We have said this way too many times in recent days and we find ourselves saying it again. That being the changing of the guard in amateur radio which continues with word of the passing of Herbert Hoover III, W6ZH, on February 4th at the age of 82.

A resident of the Los Angeles suburb of San Marino, "Pete" as he was known in the ham community was a grandson of United States President Herbert Hoover. He was also the son of former IARU and ARRL President Herbert Hoover Jr, W6ZH whose callsign Pete adopted.

Pete Hoover grew up in California, where he was an electrical engineer and venture capitalist. And following in his family's tradition of public service he was elected to the board of the National Red Cross which later became the American Red Cross Board of Governors. Although he never lived in his grandfather's home state of Iowa, he was active as a trustee with the Herbert Hoover Presidential Library Association in West Branch.

But it was to amateur radio where Pete Hoover, W6ZH, devoted a lot of his time and personal wealth. An ardent supporter of the ham radio space program in the 1970's, Pete and the late Bill Eitel, W6UF, jointly established a matching fund to encourage contributions to the amateur satellite program.

Pete was also involved in several important ARRL activities. He served as a Director of the ARRL Foundation in 1976 and as a member of the ARRL Long Range Planning Committee from 1978 to 1981. Locally, W6ZH, served as Vice President and Trustee of the Pasadena Radio Club and was also a longtime member of the Southern California DX Club.

Pete Hoover, W6ZH, is survived by his wife Meredith, his son Stephen Hoover, his daughter Leslie Hoover-Lauble along with his grandchildren and great grandchildren. In lieu of flowers, the family requests donations be made to one of several charitable institutions: Doheney Eye Institute, 1490 San Pablo St., Los Angeles, CA 90033, Hoover Institution, 434 Galvez Mall, Stanford University, Stanford, CA 94305-6010, Herbert Hoover Presidential Library Assoc., 302 Parkside Drive, West Branch, IA 52358, House Ear Institute, 2100 W. 3rd St., Los Angeles, CA 90057

A future memorial service is being planned. (ARNewsline(tm) from various published reports)

HAM KILLED IN POWER PLANT INDUSTRIAL ACCIDENT

A ham has lost his life in an industrial accident at a power generating facility that is under construction in Connecticut. According to the Shore Point Amateur Radio Club, member Chris Walters, N0HVK, of Florissant,

Missouri, was one of five workers killed in the Sunday, February 7th explosion at the Kleen Energy Plant near the city of Middletown, Connecticut.

Walters, a 48-year-old father of three was in Connecticut to work a temporary job as a safety manager for an electrical subcontractor at the plant where the accident occurred. According to Middletown Mayor Sebastian Giuliano the workers were purging a natural gas pipeline when the explosion occurred. The cause of the accident remains under investigation.

In a posting to its website the Shore Point Amateur Radio Club said that Walters has been a member of the club since October of 2009. It said that N0HVK embodied the spirit of amateur radio by volunteering for community events such as walk-a-thons, fundraisers and by attending club meetings. He was also a part of the club's first Field Day.

Chris Walters, N0HVK, is survived by his wife Fran and three children, ages 10, 13 and 15. The Shore Point Amateur Radio Club says that it plans to take up a collection to assist the family. (Southgate, telegraph.com, CBC)

EMERGING TECHNOLOGY: NIST UNVEILS THE WORLDS MOST ACCURATE CLOCK

Researchers at the National Institute of Standards and Technology have produced what they call an enhanced version of an experimental atomic clock. One based on a single aluminum atom that is more than twice as accurate as the previous pacesetter based on a mercury atom.

The new clock is the second version of NIST's "quantum logic clock. It derives its name from the fact that it borrows the logical processing used for atoms storing data in experimental quantum computing. This is another major focus of the same NIST research group.

According to measurements to be reported in Physical Review Letters, the new aluminum atom clock should neither gain nor lose one second in about 3.7 billion years. (Science OnLine)

**

HAM HAPPENINGS: GB10GKA TO REMEMBER PORTISHEAD RADIO

If you are a follower of radio history then this is for you. As you may be aware, Portishead Radio using the callsign GKA was a radio station in England that provided worldwide maritime communications and long-range aeronautical communications from 1928 until 2000. At its height of operation it was the world's largest and busiest radiotelephony station that in 1974 employed 154 radio operators who handled over 20 million words per year.

Now, to mark the 10th Anniversary of the closure of Portishead Radio the special callsign GB10GKA has been authorized from April 30th through May 27th. Operations will be on all High Frequency bands with each position manned by an ex-GKA Radio Officer.

Communications will primarily be on CW. Hours of operation will be dependent on individual operator's free time. More information about Portishead Radio can be found on-line at www.gka.btinternet.co.uk. (GB2RS)

DX

In DX, word that TX4T is the callsign of F6BEE, FO8RZ, G3TXF, and VE2TZT as they activate Tahiti on 160 through 10 meters through February 24th. They hope to take part in the CQ WPX RTTY Contest (on February 13th and 14th as well as the ARRL DX CW Contest the weekend of February 20th and the 21st. QSL via the bureau to G3TXF.

N7MSU should be on from Belize as V31SU through February 24th. His operation will be on CW and SSB concentrating on 40 and 20 meters. QSLs should be sent to his home call either direct or via bureau.

And while kind of short notice, VK6DXI, will be in Zimbabwe through February 13th. While he does not have much time for amateur radio he still hopes to make some QSOs as Zed-21-D-X-I. If you work him please QSL via SP5UAF.

NE8Z will once again be in Ecuador and plans to be active through February 24th as HC1MD. Activity should be on 80 through 10 meters using CW, SSB, RTTY and PSK31. QSL via K8LJG.

DL1NL is currently active "portable OA4" from Lima, Peru. He will be there
through mid-February mostly on CW from Radio Club Peruano as time permits. His recent activity shows he can usually be found on 20, 17 and 15 meters between 1530 to 1730 UTC. QSL via his home callsign.

N0RC will be active "stroke OX3" from Thule, Greenland between March 22nd
and April 8th. His operation will be limited as work permits, but he plans to operate at least every other day. QSL to N0RC direct or via the bureau.

Lastly, our old friend John Abbruscato, W5JON, will again be operating from a hilltop QTH overlooking the Caribbean Sea, at Marigot Bay on St. Lucia. Listen out for him as J68JA from March 2nd to the 11th on 160 through 6 meters. QSL direct to W5JON. He adds that as in the past, his XYL Cathy,W5HAM, will be very busy pool side.

(Above from various DX news sources.)

THAT FINAL ITEM: TALKING THROUGH ROCK

And finally this week, the story of a young experimenter who is taking communications underground. And his work might save lives. We have more in this report from Amateur Radio Newsline's Norm Seeley, KI7UP:

--

According to National Public Radio, caves are some of the last places in the world left to explore. And while cave exploration or caving is relatively safe, if something goes wrong a rescue can take days or longer.

Part of the delay is because cell phones, walkie-talkies and most radio systems simply do not work when trying to communicate underground through hundreds of feet of solid rock. But now a 16 year old New Mexico teenager named has Alexander Kendrick has developed a device that may make it possible for someone trapped hundreds or even thousands of feet under the Earth's surface to text a message for help.

NPR says that Kendrick's device looks something like a computer attached to a ham radio transceiver. But ham radio it isn't because it transmits data using ultra frequency radio waves that can penetrate rock more easily than on the high frequency or VHF bands.

The first test of Kendrick's cave communications device was at the famed Carlsbad Caverns in New Mexico. Kendrick was at the 950 foot level below the surface and transmitted the single word "happy" to a receiving station manned by his father directly above. The screen on the surface displayed only the letters "a-p-p-y." Not 100% copy bit in an emergency situation more than enough to alert rescue workers of a cave explorers need.

Even at only this level of success observers believe that Kendrick's invention holds the potential to significantly speed the rescue process with the ability to text from underground caves. They say that it may have other applications as well.

As far as we can determine, Alexander Kendrick is not a radio amateur. No matter, because for his development of this new underground texting communicator he was named as the winner of the 2009 International Science Fair. As such, he was awarded a new computer, a trip to Switzerland and a $12,000 cash prize. We say congratulations on a job well done.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, The RAIN Report, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. We look forward to hearing from you.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Frank Haas, KB4T, saying 73 from Holly Hill, Florida, And as always, we thank you for listening.

>

I don't think your avarage guy (or gal) is going to be able to do what that guy did, and even he had to have some spare parts on hand to keep his generator on line. They had issues with injectors and fuel lines that required parts that where not on hand or available from the hardware store up the street. This was far from a "build it all yourself" power generator. So I don't think your comparison to ham radios is a fair one.

However, it does underscore the need to have alternate power sources to power our radios. Batteries are great, but they need to be charged, generators are wonderful, but they need fuel. Thinking though these things and comming up with a long term plan to deal with likely emergency situations is the key. Then actually testing to make sure it will work is something we need to get done.

For instance, I live in the Dallas area so I have to consider what kind of emergencies I might face. Hurracaines are not likely, but tornados and ice storms are. Short term power outages are likely, long term outages a lot less. My current plan deals with short term outages using batteries and things I can operate/charge in my car. If I am faced with a long term outage, I have the ability to move far enough away to get out of the area that is likely dammaged. What you need are plans to use what you currently have that have been tested.

Being preaired is not that hard or expensive and doesn't depend on being able to build my equipment from scratch. It depends on being able and ready to deal with the likely situations I will face with the equipment I now have. And like the rest of you, I'm into collecting more radio equipment so I also consider how that new radio fits into my emergency plans or what I need to make my current radios work in that new car. It's having that necessary power cable, that cable adapter, or that coax jumper needed to make your radio work with that antenna you just purchased, and knowing where this stuff is when you

need it in the middle of the night when the power is out and your flash light batteries are about to give up.

You have to plan, test, evaluate, improve and repeat to be the most effective when the emergency hits. Simple may be better, but this doesn't mean you have to be able to run CW from a self built tuna can built out of scattered house parts using a wire thrown into a tree after an F4 levels your town. It means you have a workable plan that has been practiced that can get you on the air in as many situations as possible with what you have on hand.

Source record: 1625

My own emergency powering system consists of solar panels and
batteries.

I am building it in a stepwise fashion. The local Harbor Freight
occasionally has sales on small solar panels. My goal is to eventually
have 50 watts worth of panels. I'm at around 5 watts now, and charging
batteries with it. I run HF at around 50 watts, in fact used it for
last year's field day as a off-the grid demonstration with my Kenwood
480. Took it the whole way from full power to qrp levels and it worked
well at all of them. 50 Watts seemed to be the best compromise between
desired power and battery life. After draining the battery, I switched
to QRP.

But when I reach the 50 watt level, I expect the cells and batteries
to keep up pretty well.

> Am I missing something here?

Maybe. 1) How is the contract worded with regard to antennas? 2) No CC&R can prevent a homeowner (of a single family free-standing house) from erecting a television receiving antenna (within limits), so all it'd take is disguising a ham antenna as a tv antenna and he may not be breaking the terms of the contract. Of course a tv antenna might look odd if he lives too far from any tv transmitting antennas.

First, we have the OP saying he "was told" about this (apparent)
interpretation of the CR; maybe that's not what it says at all.

Further, he says that the reason for this (apparent) interpretation was
that the antennas "might possibly be visible to the neighbors."

Making an antenna which was not visible would appear to meet the
requirement of this (apparent) interpretation.

Jeff,

You are missing the fact that the Commissars of The Public Morality want to turn all ham operators into subservient sheep who must humbly beg their betters for the privilege of doing something unusual. Anyone who does anything that's not expected is a danger to the Public Morality! You must conform!

Gotta go; there's a helicopter circling overhead and I can't hear myselfthink.

Bill, W1AC

Right, but my point was, and still is, "What part of no don't you
understand?"

I know there's a few real lawyers involved specifically with antenna
issues and
amateur radio, but why is it everyone else jumps in their favorite
armchair and
puts on their lawyer hat and immediately tries to find every possible
excuse to
get around the "no antennas" clauses they've agreed to?

There are additional issues now regarding RF radiation. This trapped
vertical
I referred to in the March 2010 QST for example. How would his neighbor
upstairs feel about sitting on top of an active radiator putting out
somewhere
in the neighborhood of 100 watts?

People tend to go sideways about cell phone towers within sight of a school
yard. That's a LOT less radiated power than 100 watts under your feet.

....But at a *much* lower frequency. Or doesn't that matter? Anyway, there are guidelines, for hams, with regard to ERP and required distance. No responsible ham would transmit 100 watts physically nearby on any frequency. I made sure I included the adjective "responsible."

Once again, we don't know what is in that fellow's contract. In one place I lived it said "no antennas without permission," and that was before the FCC mandate to allow tv antennas and small satellite dishes. As I wrote once before, I didn't ask, I erected an antenna, and no one ever complained.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

I read this too, but if the contract says what he claimed it seems as if the FCC overruled the contract at least for some kinds of broadcast reception. For instance, they cannot forbid small satellite TV dishes. However, his solution is still not legal as the FCC specifically did not address ham radio antenna restrictions in private contracts in their OTARD rules.

See: http://www.fcc.gov/mb/facts/otard.html

> Here we go again. Another signed contract and another evasive
> maneuver around it.

PRB-1 does not void any private contracts (CC&Rs, lease agreements etc) like this and yes he seems to be violating the terms of his lease. Not that I would recommend breaking terms in contracts, his solution was interesting and does get him on the air.

> Am I missing something here?

It doesn't look like it. My reading of the QST article seems to say that this guy is in violation of his lease as he understands it and as the landlord explained it when he asked. Now the landlord may be partially mistaken (that TV reception satellite antennas are really effectively banned by his lease), but everybody (the tenant and the landlord) both seem to agree that the lease restricts ham radio antennas. Clearly they would both believe that the stealth antenna is a violation of the lease, which puts the ham on bad legal footing.

Personally, I'd not recommend willingly violating *any* contract terms without legal advice about the risks you are taking. Sure the landlord may not care in the long run but you *don't* want to end up in a legal battle if you can possibly avoid it. They are costly, time consuming and usually frustrating for all involved (except for the lawyers of course who get to bill by the hour.) If a ham wants to take the legal risk and put up stealth antennas to get on the air, Iï¿½m not going to complain. I may even come over and help you with the setupï¿½ I just donï¿½t recommend taking legal risksï¿½

If you help him put up an antenna which is contrary to his CCRs,
wouldn't that make you an accomplice? And maybe equally liable to be
sued? You'd best check this out with your lawyer beforehand.

I'm pretty sure that helping somebody assemble an antenna doesn't present much of a legal risk for me. There is no criminal issue so I don't think I would have to worry about my DA charging me with being an "accomplice" to a crime because the contract violation is a civil matter and not a crime.

If you wanted me to help you assemble a small tower in your backyard, contrary to your CC&R's, the HOA is going to deal with you, the property owner not me. The HOA has no reason to fine me or legal standing to place leans on my property for a CC&R violation on your property. I suppose you could try and sue me, but I seriously doubt any jury in the world would hold me responsible for just helping you assemble something. I you could try and sue me for that.

Of course, my point really is that you should fully understand the risks you are taking when you start violating contracts you have signed. Sometimes the possible consequences make it not worth taking the risk.

First let's note that CC&Rs are theoretically contractual obligations. While the terms of a contract may be enforced through either arbitration or legal process, there can be no criminal liability and hence no chance of being an accomplice.

2nd, the individuals who need to consult attorneys are those who want to either enforce the terms of CC&Rs or to avoid their effect.

3rd, I'ld suggest finding out which restrictions apply to a piece of land before purchasing said property, but there are always exceptions which vary by state. Some conditions cannot be enforced, while at other times if a period of time has passed without enforcement, enforcement also isn't possible.

4th, the ideal solution would be for Congress to direct the FCC to exempt amateur installations from most such contractual obligations, and then have the FCC do so, as it did for TV antennas and dishes less than one meter in diameter. I don't see that happening in the near future, but we as hams can always hope.

Actually where iam from Maine you would be held accountable as well as you gave him help or advice in doing something you know is against the home owners rules. for where he lives. they could take him and you to court or he could just take it down and they do nothing:)

Which is pretty much the intent of HR 2160, albeit in a round about
sort of way.

http://www.arrl.org/?artid”29

I'm guessing that this bill will never make it out of committee, and
even if it did, there is no real hope of it directly helping this
situation unless the report it commissions spurs congress to act.

We've had some efforts at the Texas state level to make a state law
that applies the PRB-1 language to private contracts and CC&R's but
these usually never make it very far. Other states may have had more
luck with this, I don't know. In Texas they where strongly opposed by
the HOA management company lobby and I suspect that the same folks
would come out of the wood work to oppose any efforts at the federal
level.

Best we can do at this point is to try and lobby our congressmen to
support HR 2160 and senators to support SB 1755. See the ARRLï¿½s
information http://www.arrl.org/govrelations/ page for details on how
best to help.

Even if you donï¿½t have CC&R problems now I would recommend any ham (or
other interested party) urge your elected officials to support this.
I would love to have a better legal position when trying to talk the
HOA into letting me put up some antennas. Right now I have to pretty
much beg and take what they give me.

A couple of years ago in Nevada, a bill was proposed to incorporate PRB-1 into state law, and also to extend it to CCRs. There was much opposition to the CCR part by builders, HOAs, etc. Finally, the sponsors deleted the CCR part, so that they could get the PRB-1 part into state law. The bill finally passed with the PRB-1 only. The thinking was, let's get PRB-1 passed, and fight for the CCR part another year. We're still waiting.

==> ON-THE-AIR : CALLING ALL ROOKIES -- AND NON-ROOKIES, TOO! GET ON
THE AIR FOR THE ARRL ROOKIE ROUNDUP

The ARRL Rookie Roundup is designed to help newly licensed amateurs
build their operating skills on HF. It is a contest specifically for
those new to Amateur Radio, similar to the ARRL Novice Roundup that ran
from 1952 until 1995. The Rookie Roundup brings the fun and Elmering of
the old Novice Roundup into the 21st century. Three Rookie Roundups
will be held each calendar year: SSB in April, RTTY in August and CW in
December. Read more here
<http://www.arrl.org/news/stories/2010/02/18/11349/?nc=1>.

==> ARRL LEADERSHIP : ROD BLOCKSOME, K0DAS, APPOINTED MIDWEST DIVISION
VICE DIRECTOR

ARRL President, Kay Craigie, N3KN, has appointed Rod Blocksome,
K0DAS, of Robins, Iowa, as the new Vice Director in the Midwest
```

Division. The position became vacant when Midwest Division Director Bruce Frahm, K0BJ, was elected ARRL Vice President at the 2010 ARRL Board of Directors Annual Meeting and Vice Director Cliff Ahrens, K0CA, moved into the Director position. "I'm honored to be selected as the Vice-Director of the ARRL Midwest Division and am looking forward to serving the division hams to the best of my ability," Blocksome told the ARRL. "I grew up in Kansas, lived in Iowa and have traveled to more than 50 different countries, so I hope to bring my Midwestern roots - as well as a multi-cultural/international perspective - to this position." Read more about Blocksome here <http://www.arrl.org/news/stories/2010/02/16/11344/?nc=1>.

==> ARRL LEADERSHIP : GRANT HOPPER, KB7WSD, APPOINTED NORTHWESTERN DIVISION VICE DIRECTOR

ARRL President, Kay Craigie, N3KN, has appointed Grant Hopper, KB7WSD, of Everett, Washington, as the new Northwestern Division Vice Director. The position became vacant when no one submitted the necessary election materials needed to run for the Vice Director position. Hopper is an attorney and serves as an ARRL Volunteer Counsel (VC). "I'm excited to serve the Northwest Division," Hopper said. "We have a phenomenal number of talented, innovative, committed, and generous hams here in the Northwestern Division. I look forward to not only doing what I can to support their efforts and the activities within the division, but also representing their interests up at the national level. From my community and volunteer activities -- as well as my law practice -- I tend to think of myself as a 'behind the scenes' sort of person, bringing people together, examining issues and solving problems. I think those skills will serve me well as a Vice Director and I'm glad I can share them for the benefit of Amateur Radio." Read more about Hopper here <http://www.arrl.org/news/stories/2010/02/17/11346/?nc=1>.

==> EYE ON AWARDS : MORE ON THE IARU REGION 2 AWARD

Since the announcement <http://www.arrl.org/news/stories/2010/02/11/11335/?nc=1> on the ARRL Web site of the IARU Region 2 Award <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf#pdf> last week, Region 2 officials have been busy answering question from amateurs all over the world about this award, first introduced in October 2007. According to IARU Region 2 Secretary RamÃ³n Santoyo, XE1KK, officials have analyzed the questions and have now clarified the rules, making them easier to understand. You can access the newly rewritten rules <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf#pdf> on the IARU Region 2 Web site <http://www.iaru-r2.org/>.

==> ARRL PUBLICATIONS: CHECK OUT THE MARCH/APRIL 2010 NCJ

The March/April issue of NCJ, The National Contest Journal, is filled with the latest news from the contesting world. Whether you are new to contesting or are a seasoned pro -- or somewhere in the middle

-- you will find something in NCJ just for you. In addition to all of the exciting articles in the March/April issue, you will find all of the regular columns and features that you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks and Techniques," by Gary Sutcliffe, W9XT; "VHF-UHF Contesting," by Jon Jones, N0JK; "RTTY Contesting," by Don Hill, AA5AU; "Propagation," by Carl Luetzelschwab, K9LA; "Contesting on a Budget," by Ralph Bellas, K9ZO; "Software for Contesters" by Pete Smith, N4ZR, and "Contesting 101," by Kirk Pickering, K4RO. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. NCJ is what every contester needs in his or her shack -- subscribe today <http://www.arrl.org/ncj/>! Read more here <QEX%20--%20the%20March/April%202010%20Issue>.

==> ARRL PUBLICATIONS: QEX -- THE MARCH/APRIL 2010 ISSUE

The March/April issue of QEX <http://www.arrl.org/qex> is coming soon, and it is full of theoretical and practical technical articles that you won't want to miss. QEX is the ARRL's "Forum for Communications Experimenters." Published bimonthly, it features technical articles, columns and other items of interest to radio amateurs and communications professionals. The mission of QEX is threefold: To provide a medium for the exchange of ideas and information among Amateur Radio experimenters; to document advanced technical work in the Amateur Radio field, and to support efforts to advance the state of the Amateur Radio art. QEX is edited by Larry Wolfgang, WR1B <lwolfgang@arrl.org>. Subscribe to QEX today <http://www.arrl.org/qex>. Read more here <http://www.arrl.org/news/stories/2010/02/16/11345/?nc=1>.

==> W1AW NEWS: W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

Beginning Monday, March 15, W1AW, the Hiram Percy Maxim Memorial Station, will alternate the digital modes used for its digital bulletin transmissions. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, W1AW Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16. "Because of time constraints and the varying lengths of digital bulletins, there were many instances where only Baudot was used," he said. "With the new schedule, amateurs preferring either PSK31 or MFSK16 will no longer find these modes secondary." Read more here <http://www.arrl.org/news/stories/2010/02/16/11343/?nc=1>.

==> SOLAR UPDATE

Tad "The Sun did not shine, it was too wet to play <http://en.wikipedia.org/wiki/The_Cat_in_the_Hat>" Cook, K7RA, reports: We have been seeing improved conditions with moderate sunspot activity, and we should keep seeing these good conditions this weekend for the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2010/intldx.html>. The average daily sunspot number for the past week was 38.7, down 4.6 points from

the prior week, but the average daily solar flux rose 4 points to 90.6. The predicted solar flux for February 18-22 is 88, 88, 86, 85 and 84. The planetary A index for the same period is predicted at 10, 10, 5, 5 and 5. Look for more information on the ARRL Web site on Friday, February 19, including a look at some new resources for grabbing up-to-the-minute data from ionospheric sounders. These are very useful for studying HF propagation paths and understanding phenomena that we recently discussed on 75 meter short-skip propagation. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Dr Seuss' The Cat in the Hat <http://en.wikipedia.org/wiki/The_Cat_in_the_Hat>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> W1AW NEWS: MARCH W1AW/WEST COAST QUALIFYING RUN SCHEDULE

The March schedules for the W1AW and West Coast Qualifying Runs were inadvertently left out of the March issue of QST. The March schedules for W1AW are as follows: Friday, March 5 at 10 PM EST (Saturday, March 6 at 0300 UTC) for 10-25 WPM and Tuesday, March 16 at 7 PM EDT (2300 UTC) for 10-40 WPM. The West Coast Qualifying run will be transmitted by station K6KPH on Saturday, March 13 at 2 PM PDT (2200 UTC) for 10-35 WPM. The run will be transmitted simultaneously on 3581.5, 7047.5, 14047.5, 18097.5 and 21067.5 kHz.

==> THIS WEEK ON THE RADIO

This week, the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2010/intldx.html> is February 20-21. There is another NCCC Sprint Ladder on February 19. The Feld Hell Sprint is February 20, the Run for the Bacon QRP Contest is February 22 and the SKCC Sprint is February 24. Next week, look for an NCCC Sprint Ladder on February 26. The Russian PSK WW Contest and the CQ 160 Meter Contest (SSB) are on February 26-27. The REF Contest (SSB), the EPC WW DX Contest, the UBA DX Contest (CW), the Mississippi QSO Party and the North American QSO Party (RTTY) are all on February 27-28. The High Speed Club CW Contest is February 28. The North Carolina QSO Party is February 28-March 1. The ARS Spartan Sprint and

the AGCW YL-CW Party are both on March 2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> NEW ARRL WEB SITE COMING SOON

After more than two years of planning, designing and writing, we here at the ARRL are eagerly anticipating the launch of the new ARRL Web site. We've been able to make the online experience easier for our members -- from the online store, to registering for a class, to finding a club -- plus we've created a new, enhanced member profile with many more options available. We've made improvements with you in mind, making sure that we've created the easiest, most enjoyable online experience possible. The new Web site will be available at the end of February.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

"Accomplice" is a meaningless word with regard to civil contracts.

> First let's note that CC&Rs are theoretically contractual obligations.
...

can
> always hope.

Don't forget state law. For example, here in California, we had a statute
protecting satellite dishes a year before the FCC imposed their federal
position.

220. Amateur Radio Newsline(tm) Report 1697 - February 19, 2010

Newsgroup: rec.radio.amateur.moderated
Date: 2010-02-19 03:58:36 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>

Amateur Radio Newsline(tm) Report 1697 - February 19, 2010

Amateur Radio Newsline report number 1697 with a release date of Friday, February 19th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL commits to helping change rule 97:113 so more hams cab take part in disaster drills, the FCC issues a giant waiver to part 97.113 covering thirty-two licensed ham employees in Georgia, a California ham solves a Broadcast Remote Pick-up jamming problem and rare earth is growing a lot rarer. Find out the details on Amateur Radio Newsline(tm) report number 1697 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: ARRL SAYS VIA QST IT WILL FILE TO REVISE FCC RULE 97.113 TO PERMIT HAMS TO VOLUNTEER EMCOMM TRAINING SERVICES TO EMPLOYERS

The ARRL appears poised to ask the FCC to liberalize Section 97.113 of the Amateur Service rules. This to give hams more leeway in taking part in emergency training drills sponsored by their employer. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following events in this ongoing saga and has the latest:

--

With the arrival of February's QST comes confirmation that the American Radio Relay League is, indeed, preparing to formally join the call for change to Section 97.113.

Dave Sumner, K1ZZ, confirmed the issue has been a hot topic ever since the release of a report from an ARRL board ad-hoc committee regarding the whole issue of "pecuniary interest" and amateur radio.

Given how much attention the issue has gotten at the FCC - the result of petitions filed requesting changes in the rule - the ARRL is now ready to act.

In his editorial in the February QST, Sumner referred to the ARRL's board motion instructing ARRL staff to "urge the FCC to add an exception to 97.113 of the FCC Rules to permit an amateur station - licensee or control operator, on behalf of an employer, to 'participate in emergency preparedness and disaster drills that include amateur operations for the purpose of emergency response, disaster relief or the testing and maintenance of equipment used for that purpose. "

Sumner concedes in his editorial that there are a wide range of views from among ARRL's membership ranks with some suggesting there be no change at all in the rule to others saying it's just too limiting.

Sumner says: "Given that the FCC appears to be inclined to consider changes, it behooves the ARRL as the representative of the broadest constituency of radio amateurs to formulate an approach that addresses the bulk of the concerns about the present rules with as little impact as possible on the volunteer character of Amateur Radio."

As we told you a few weeks ago when we reported on a petition on the matter filed by Rich Moseson, W2VU, of CQ Magazine, this isn't going to happen overnight. As Moseson concluded, the FCC is likely to await the ARRL's petition and then put that together with input from some of the other filings before issuing a Notice of Proposed Rulemaking. And, that could take a few months before it comes out for comment.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Along with the filing from educator Gordon West, WB6NOA and his two associates, and the one from CQ Magazine, the rules change petition from the ARRL will make three requests to the FCC with one singular purpose. That of making it possible for hams to volunteer their services when their employer is holding an emergency training exercise and doing so without having to have the employer first file for a waiver from the FCC. (ARNewsline(tm) from QST Editorial)

**

RESCUE RADIO: POSSIBLY THE LARGEST EMCOMM WAIVER YET

Meantime, the FCC continues to quickly grant waivers to governments and emergency providers looking to use ham radio operators in their employ as part of disaster response training exercises. The latest is to Stephens County Emergency Medical Services of Toccoa, Georgia to permit their employees and those of the Stephens County Hospital to transmit communications on behalf of their employers in connection with a twelve hour March 17th exercise.

And in what may be the largest numbers to date, this waiver issued on February 16th from the FCC's Deputy Chief of its Mobility Division covers thirty-two radio amateurs in the employ of the these organizations who have volunteered to take part. The waiver specifically permits transmission of communications by the amateur service employees on behalf of their employers during the exercise, and immediately prior to it for the purpose of operational testing of equipment. You can read the text of this waiver at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-10-246A1.txt (FCC)

**

RADIO WEATHER: WINTER STORM CLOSES FCC

Due to back-to-back major snowstorms in the Washington metropolitan area last week, the Federal Communications Commission was forced to postpone two important meetings. One was the Wednesday, February 10th was to be public forum on creating an emergency response center for pubic safety broadband communications. The other its monthly open public meeting on Thursday the 11th.

The commission's February open monthly meeting was rescheduled for February
18th. Two items on the agenda concern streamlining the agency's processes to make the FCC's work more transparent. One is a Notice of Proposed Rulemaking to enhance the efficiency, openness and transparency of the commission's proceedings by improving and modernizing certain organizational and procedural rules. The concerns the so-called "ex parte"
rules, which govern reports written by those who meet with commission officials to sum up what was discussed. (FCC)

**

HAITI UPDATE: IRESC HAM RADIO RELIEF EFFORTS OVER THE INTERNET

A report from the International Radio Emergency Support Coalition says that its members went into full activation bringing immediately after the earthquake that devastated much of the island nation of Haiti. According to Chris Johnson things on the Echolink based conference net sprang to life when David Farquharson HH2QCS and Jean-Robert Gaillard HH2JR were able to get into contact with the Coalition. They both had rather grim reports. HH2JR noted that he had lost several close family members. He also lost his cousin, Micha Gaillard, the Opposition Leader in Haiti. Jean-Robert himself reported that had been attacked by mobs.

The International Radio Emergency Support Coalition through the Echolink Net and the database on its website says that it was able to help with the limited amount of information coming out of the island, along with collecting information on missing people, coordinating of supplies to people on the ground, along with general inquires. At one point the Coalition says that it had over 200 hams monitoring its net for Haiti operations. It says that this shows the true potential of the use of Echolink along with other amateur radio internet applications for use in the use of emergency communications.

The International Radio Emergency Support Coalition bills itself as an alliance of volunteer communicators spread around the globe. More about this group is on-line at www.iresc.org. (IRESC)

**

MISSING PERSON: UK POLICE SEARCH FOR MISSING RADIO AMATEUR

Police in the United Kingdom are in search of missing radio amateur. The Tamworth Herald reports that police are appealing for help in tracing 43 year old David Andrew Salisbury, M3FDZ, of Newton Regis who not been seen since Friday January 29.

Salisbury, a married father of two disappeared unexpectedly and without a trace. He is described as a white male and around 5 foot 5 inches tall. He has what is described as striking straight white hair and was last seen wearing blue jeans, a gray T-shirt with the words 'Rock and Roll' in red, a blue hooded top and black cap with the letters 'NY' on the front in white lettering.

M3FDZ is a member of Tamworth Amateur Radio Club which is also concerned about his welfare. More details and a photograph of David Salisbury, M3FDZ, can be found at www.thisistamworth.co.uk/news/Appeal-trace-missing-Tamworth-man/article-1823807-detail/article.htm
(Southgate)

**

ENFORCEMENT: 450 MHZ INTERFERENCE NAILS METRO TRAFFIC IN SAN DIEGO

Ham radio training in direction finding is responsible for bringing a quick end to the jamming of a broadcast repeater run by Metro Traffic in Southern California. Bill Pasternak, WA6ITF, spoke to the ham who solved the problem so that the airborne traffic reports could continue:

--

According to broadcast engineer Matt Lunati, N6OEI, Metro Traffic's voice repeater in San Diego was jammed about a week ago by a large number of simplex hand-held radios that were pressed into service by the near-by La Mesa-Spring Valley School District. The radios were reportedly programmed to transmit on 455.500 MHz and sold to the School District by an equipment dealer that told the district not to worry about licensing.

455.500 MHz is Metro's licensed repeater input frequency and the resulting interference that jammed Metro's helicopter communications.

So N6OEI used his direction finding skills garnered from hid amateur radio training to track down the source of the interference:

--

N6OEI: "I heard children's activities being described on the channel. And the next day I trook a listen after what would be school hours (and) drive time for us when we have our chopper in the air and noticed that the communications came up again on our frequency and tracked it to the elementary school located in the Casa D'Oro area of San Diego County. It took me about 30 minutes. There was a lot of chatter on the frequency so

finding it and DF'ing it was not difficult at all."

--

He then met with the school district staff to explain that 450 to 460 MHz is not a licensee-free band:

--

N6OEI: "To rectify the problem immediately, because obviously they did not know the amount of problems they were causing, I went and made contact with the school principal who was very accommodating and very apologetic and ceased operation right there and assured me this would not happen again."

--

Reportedly, the San Diego FCC field office is now involved in the case. The Commission might only go after the school district for allegedly operating on an unauthorized frequency. However the dealer could also face the Commission's wrath. This is because FCC Rule 90.427(b) states that: "Except for frequencies used in accordance with Section 90.417, no person shall program into a transmitter frequencies for which the licensee using the transmitter is not authorized."

Add to this a report carried in the C-G-C Communicator industry newsletter that quotes an informed stating that once it became obvious that 455.500 MHz was causing interference, the equipment vendor reportedly supplied a list of other frequencies for the district to try. If such a list exists, it would be a smoking gun since the 450 band is not license free.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the Newsroom in the City of Angels.

--

Translated it means that the equipment dealer could conceivably be liable if the FCC decides to press the case. (CGC, ARNewsline(tm))

RADIO LAW: CELLPHONE BILLS BEFORE HAWAII HOUSE WILL EXEMPT HAM RADIO

Some good news for hams living on the Island state of Hawaii. It appears as if they will likely be safe from rules to be imposed on the mobile use of cellular telephones.

Pacific ARRL Section Manager Bob Schneider, AH6J, and Bart Aronoff, WH6AA recently testified before a Hawaii house subcommittee on HB 2225 however HB2602 is now before committee in place of 2225. Both measures deal with the use of cellular telephones while driving.

Conferees are now trying to combine HB2602 with SB2755 to come up with a final version. Both of these bills as well as the recently passed Kauai council bill 226 exempt amateur radio operators from the restrictions imposed by what is known as mobile cellphone

prohibitions. (hamradiohawaii via KH6QX)

**

ON LINE: NEW ARRL WEBSITE TO BE ON-LINE BY THE END OF FEBRUARY

The American Radio Relay League says that after more than two years of planning and design that the it is eagerly anticipating the launch of its new Web site. According to a posting at the current site, the new web design will be available at the end of February at the same URL. .

The big change is in overall design that the ARRL says should make the online experience easier for its members. The ARRL says that the improvements were made with visitors in mind to create the easiest, most enjoyable online experience possible.

A preview of the new web design can be found in the latest issue of QST magazine. And for the few of you who may not be aware, the on-line address of the ARRL website is www.arrl.org. (ARRL)

**

THE SOCIAL SCENE: W5KUB WILL AGAIN WEBCAST HAMVENTION

For the 8th consecutive year, Tom Medlin, W5KUB, and his crew of video enthusiasts will be webcasting the Dayton Hamvention. The live broadcast starts approximately 1300 UTC on May 13th and continue through May 17th over Tom's w5kub.com website.

The webcast begins and ends in Tom's driveway in Cordova, Tennessee and includes the scenic trip from Cordova to Dayton. And as last year, Tom plans to give away prizes to some who tune in.

The W5KUB.com website is available 24 hours a day, 7 days a week and 52 weeks a year for you to enjoy. Tom invites everyone to drop by, spend a few minutes and say hello on-line. And for more about Tom and his live roving webcasts look at his profile on qrz.com. (W5KUB)

**

THE SOCIAL SCENE: EASTERN VHF/UHF CONFERENCE IN APRIL

Registration is now open for the 36th Annual Eastern VHF/UHF Conference slated for April 16th to the 18th at the Crowne Plaza Hotel, in Enfield, CT. Also, the NorthEast Weak Signal Group is calling for the submission of papers and presentations on both the technical and operational aspects of VHF, UHF and Microwave weak signal amateur radio. The latest conference news can be found on-line at http://www.newsvhf.com/vhfconf.html (ANS, N2LIV)

**

THE SOCIAL SCENE: NEBRASKA ARRL CONVENTION IN MARCH

The ARRL Nebraska State Convention End of Winter Hamfest will take place on March 20th at the Lancaster Event Center located at 84th and Havelock in Lincoln. Among the featured speakers are Bob Allison, WB1GCM, from ARRL HQ giving a look at the ARRL Lab and how it works and the ARRL Midwest Division Director, Cliff Ahrens, Kï¿½CA,. Ahrens will be bringing attendees up to date happenings at ARRL HQ and within the Division. For more information, please visit the www.lincolnhamfest.org. (Kï¿½AIZ)

**

NAMES IN THE NEWS: K0DAS NAMED NEW ARRL MIDWEST VICE DIRECTOR

ARRL President, Kay Craigie, N3KN, has appointed Rod Blocksome, K0DAS, of Robins, Iowa, as the new Vice Director in the Midwest Division.

Among his many Achievements, Blocksome has been a member of the Central States VHF Society since 1975 and a Charter Life Member since 2001. He has served as President of the organization in 1984, 1991 and 1998, with 21 years on its Board of Directors. He is also the recipient of the Society's 1993 Mel Wilson Award. An avid Collins Radio aficionado, Blocksome has been a member of the Collins Collector Association since 1996 and has served two years on its Board of Directors.

The position of Midwest Division Vice Director became vacant when Director Bruce Frahm, K0BJ, was elected ARRL Vice President at the recent 2010 ARRL Board of Directors Annual Meeting. As a result, then Vice Director Cliff Ahrens, K0CA, moved into the Director seat. (ARRL)

NAMES IN THE NEWS: N4KC TO PUBLISH 21st BOOK IN APRIL

Don Keith N4KC will release his twenty-first book titled War Beneath the Waves in early April. This is the non-fiction work that will tell the story of USS Billfish. The Billfish was an American submarine that came under an intense depth-charge attack in the Makassar Strait off Borneo in 1943. And in an interview with Rain's Hap Holly, KC9RP, Don gave a little background on the story:

--

"Well, as it happens the captain of this submarine completely lost it. The second in command was overcome by bad air and couldn't breathe. The third in command had to be sedated and put in his stateroom because he lost it. So the forth in command, a young sub-mariner named Charlie Rush actually took over from the captain. It might be called a mutiny at some points but it had to happen. He took over and (with) a couple of Navy Chiefs just performed miraculous feats that night and saved the boat."

--

N4KC says that this incident brought out the worst but also the best in its crew. It was also a story that was not revealed for sixty years.

War Beneath the Waves will be published in hardback by NAL/Caliber. This is an imprint of Penguin Group USA. Don also maintains a web site devoted to his writings on amateur radio at www dot n4kc dot com. And you can hear the complete interview with Don Keith, N4KC, on-line at www dot therainreport dot com. Its one you will not want to miss. (N4KC, KC9RP)

EMERGING TECHNOLOGY: NEW 100 GHZ TRANSISTOR ANNOUNCED

Its the fastest high frequency transistor ever developed. Amateur Radio Newslines Frank Haas, KB4T, reports:

--

Researchers at IBM have demonstrated a graphene-based radio frequency transistor with a high frequency cut-off of 100 Gigahertz. This new top frequency record was achieved using wafer-scale processing technology comparable to that used in the fabrication of advanced silicon devices

For those who have never heard the term, graphene is described as a single atom-thick layer of carbon atoms bonded in a hexagonal honeycomb-like arrangement. This two-dimensional form of carbon has unique electrical, optical, mechanical and thermal properties and its technological applications are being explored intensely.

The development of this new 100 Gigahertz transistor is considered a key milestone for the use of Carbon Electronics for RF Applications. The development of this new transistor was recently made public in a paper published in the magazine Science.

--

Funding for this project was funded by the Defense Advanced Research Projects Agency in an effort to develop next-generation communication devices. (Science OnLine)

**

EMERGING TECHNOLOGY: GOOGLE COULD BE YOUR NEXT ISP

Google could become your next Internet Service Provider or ISP. This, according to news reports that say the search engine provider wants to offer super-fast broadband to thousands of US homes.

It the reports are accurate then Google's plan is to build a fiber-optic network offering speeds of up to 1gigabit per second and roll it out in up to 500,000 homes. And to do this at a price point that would compete with other broadband providers offering much slower speeds.

According to Google's on-line blog the plan is to build and test ultra high-speed broadband networks in a small number of trial locations across the United States. The company already has an internal fiber optic network which connects its data centers. This speeds up search functions and lowers the cost of streaming video on YouTube. (BBC, Science Today, others)

**

WORLDBEAT: NEW DRM DISCO STATION ON SHORTWAVE

If you think that shortwave is a dead medium for entertainment then you may be surprised to learn about a Miami-based disco music station can now be heard across North America and Europe. The Disco Palace is using Digital Radio Mondiale or D-R-M technology to broadcast high-quality music programs on shortwave.

Programming for The Disco Palace consists of disco music from the 1970s and 1980s or music closely related to disco. North American broadcasts originate on 17.755 MHz from French Guiana. European transmissions are on 6.015 MHz from France. Transmission services are being provided by Digital Radio Mondiale pioneer TDF of France. (DRM Info)

**

EMERGING TECHNOLOGY: NEW POWER MANAGEMENT CHIPS FROM TI

Texas Instruments Incorporated has introduced its first dual-output fully synchronous SWIFT(tm) power management integrated circuit. TI says the TPS54290 converter simplifies power design in consumer electronics with a 12 volt power supply. The new device operates from a 4.5V to 18V input supply voltage, and supports output voltages as low as 0.8V with a 90 percent power efficiency rating. More is on the web at www.ti.com (PSD)

HAM RADIO IN SPACE: ASTRONAUT RON GARAN TO GET HIS HAM TICKET

Another astronaut is preparing to take his ham radio exam. Ron Garan recently participated in an Amateur Radio on the International Space Station program training session and plans to study for his amateur radio license. Garan is scheduled to fly with the Expedition 27 crew in March of 2011. (ARISS)

**

RADIO IN SPACE: ARECIBO DISH ACTIVE FOR APOLLO EME 2010

Echoes of Apollo EME 2010 or World Moon Bounce Day, is scheduled for the weekend of April 16, 17, and 18. This year, EOA has been given a special opportunity to use the Arecibo Dish in Puerto Rico as the ultimate "big

gun" station on 432 MHz SSB & CW. EME operation on 1296 MHz may also be possible.

Arecibo has more than 50 dbi gain on 432 MHz so the team thinks it can be heard with modest equipment. Listeners with a unique opportunity to utilize modest UHF and 1296 stations to copy EME signals. A large OSCAR-class antenna array equipped station may be able to participate. (Echoes of Apollo)

**

DX

In DX, word that F8ALU is active from Morocco as CN2BG and will be there until the beginning of March. You usually will find him on 14.115 and 14.130 MHz. QSL via his home call.

JT1JC has been very active in RTTY and PSK31 from Mongolia the last few weeks. Listen for her on 20 meters on PSK from 2245 to 0030 UTC and in RTTY from 0700 to 0800 UTC. QSL via PO Box 73, Ulaanbaatar-35, Mongolia.

DL1NL is operating portable OA4 from the Peruvian capital Lima through mid to late February. He is active mostly in CW on HF whenever his time permits. QSL cards should be sent via his home call.

V31RI is the call of DL6RAI, operating in Belize through March 2nd. His QTH is Consejo Beach and you can expect activities mostly in CW and in SSB. QSLs via bureau or direct to his home call. He's also accepting electronic cards via Logbook of the World.

And lastly, NP2OR is active from Uganda and will be there until May. He is on the air as 5X7JD using SSB on 20 and 40 meters daily from 0500 to 1550 UTC. QSLs only direct via Jack Dunigan, Box 100, Masaka, Uganda.

(Above from various DX news sources)

THAT FINAL ITEM: RARE EARTHS GETTING RARER

And finally this week comes word that rare-earth elements such as Europium, Tantalum, Neodymium and countless others that form the backbone of today's modern solid state electronics and ham radio gear could eventually be in short supply. This, according to an article by Jeremy Hsu published by Yahoo On-Line that says China's growing electronic production industry has become the worlds largest user of these rare elements.

According to Hsu, rare earth's often prove irreplaceable in green technologies and high-tech consumer products. Yet the world's production of rare minerals relies mainly upon China, and the Chinese government warned last year that its own rising demand will soon force it to stop exporting the precious elements.

Deposits of rare earth elements exist in the United States, Canada and other countries, but only China's government supports the mining and

refining industries capable of processing the resources from start to finish. And while China has encouraged companies that use rare earths to locate their manufacturing facilities in that nation, some companies fear moving because of concerns about intellectual property protection.

Hsu's article is an insightful look at materials that affect almost everyone's daily life and especially those in ham radio. You can find it on-line
at

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

I'm offering no legal advice, but I strongly suggest you see a competent lawyer admitted to the bar in Maine about this. It's hard to see just how a 3rd party not contractually bound to the terms of a CC&R can be reached legally. There's no cause of action available with the possible exception of an attorney who completely mis-understood and gave really poor advice about Maine law, advice so poor that it constitutes malpractice.

The property owner of property subject to a Covenant, Condition or Restriction can be reached legally under contract law, but not others. CC&Rs are treated as contractual obligations even if truthfully, most people don't realize they're entering into such a contract.

I'll be honest, I don't see how a 3rd party can be sued under existing US law over a contractual obligation of another. If Maine has such a legal system, I'ld be really shocked.

>into state law. The bill finally passed with the PRB-1 only. The
>thinking was, let's get PRB-1 passed, and fight for the CCR part
>another year. We're still waiting.

No surprise. In general, the Hill's response to an effective bill
that upsets powerful folks [And make no mistake, the homebuilders
are a powerful lobby group..] is to pass a watered-down bill that
accomplishes little.

That way, when Your Gal/Guy is stumping for reelection,
[s]he can hold the bill up as a legislative accomplishment.

There's every reason to believe that state legislatures
work in a similar manner.

I'm not a lawyer either.

But it *might* be possible to go after the thrid party legally if and only if it could be shown that the third party knew of the existence of the contractual obligation from the beginning, and willfully conspired with the property owner to violate it.

But that's a very hard thing to prove in many cases.

For example, suppose A hires the B Fence Company to put up a fence on A's property, in an area where fences don't require building permits or inspections. A tells B where to build the fence.

But it turns out that A misunderstood where the property line is, and the fence is built on C's property. (C was away from home and doesn't see the fence until the job is done).

I don't think C can sue B over the fence; instead, C has to go after A. C can also remove and sell the fence - it is now C's fence because it was built on his property. A still has to pay the B Fence Company because the contract is between the two of them, and as long as B built the fence where instructed by A, that part of the contract wasfulfilled.

Not an exact analogy but you get the idea.

While I'm not a lawyer, things like this prove the need for thorough research before signing anything. Being told at closing that there are CC&Rs is way too late, IMHO

Which goes back to my original point behind all this.
We as Amateur Radio operators must take the time to
fully research a piece of property before we buy it.

And we've got to understand that having a license does
not give us a free pass on violating signed contracts.

Sadly, I see way too many "Look how I got around the CC&R
I signed with my stealth antenna installation."

Seeing these repeatedly published in a national magazine
makes me wonder if there's actually some tacit approval of
this.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

226. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated

URL: http://www.panix.com/~rram/usenet/rri/index.html

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Nominating Period Open For 2010 Amateur Radio Newsline Young Ham Of the Year Award

Los Angeles, CA. (February 15, 2010) - If you know a young radio amateur age 18 or younger who has done something very special in the Amateur Radio hobby, or if you know of one who fits this description, now is the time to consider nominating him or her for the 2010 Amateur Radio Newsline Young Ham of the Year Award.

HOW THE YHOTY AWARD WORKS

The "Young Ham of the Year Award" -- better known by the acronym "YHOTY"
-- is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger, is a resident of the 50 United States, Puerto Rico and the Canada provinces, and who has provided outstanding service to the nation, the community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

All nominations must be received by May 30 of any given calendar year on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the Young Ham of the Year Award c/o Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download or on-line submission from our website at http://www.arnewsline.org

WHOM TO NOMINATE

Here are some of the things you should be thinking about it in a nominee. First off, as noted above, the nominee must be age 18 or younger and a resident of the United States, Canada or Puerto Rico. He or she must

hold a valid Amateur service license issued by the United States FCC or Canadian telecommunications regulator Industry Canada.

Also, your nominee should be someone who has done something outstanding as an Amateur Radio operator. Perhaps it was something special he or she did for his community through the Amateur service. Maybe it was some outstanding achievement that led to an improvement in amateur radio in his or her area. Or perhaps he or she was successful in recruiting a lot of new hams. Whatever it was or is, we want to hear about it.

If you're looking at what makes a good candidate, we suggest you do an Internet search using the search argument "Young Ham of the Year Award Winners" and look at the credentials of past award recipients.

HOW TO FILE A NOMINATION

Printable nominating forms are available at our website: www.arnewsline.org. Simply scroll down to the bottom of the page and click on the words: "2010 Young Ham of the Year Nominations Now Being Accepted" You can then download the Nomination Form" by simply clicking on the word "HERE." The nomination is in Microsoft Word format.

It is very important that you, as a nominator, fill out the downloadable and printable application as required. If you're sending it by way of the regular mail, please make sure it reaches us at Amateur Radio Newsline, 28197 Robin Ave., Saugus CA. 91350 by May 30 2010. That's the deadline for all applications. Or you can scan and e-mail in the nomination in either Microsoft Word (.doc) or Adobe (.pdf) to us at newsline@arnewsline.org. (Please be certain to use one of these two common format that can be opened by those with both PC and Mac computers.)

In addition to the completed nominating form, we need as much documentation as you can give us so the committee can carefully evaluate each nominee. When we say documentation, we are talking about letters, e-mails, magazine articles, videos and other kinds of endorsements that would accompany the application. In the past, we've even had photos e-mailed in with some of the applications. Please be aware that any materials sent to us become the property of Amateur Radio Newsline, Inc. and cannot be returned. As such we advise to send copies only rather than original documentation.

THE AWARD PRESENTATION

As in years past, the 2010 Young Ham of the Year will likely receive an expense paid trip to the Huntsville Hamfest in Alabama and a gift of Amateur Radio gear compliments of Vertex-Standard Corporation. Those are the wonderful folks who manufacture the famed Yaesu line of ham radio gear.

From our other primary corporate sponsor -- CQ Magazine -- which in 2010 is celebrating its 65th year of service to the world-wide ham radio community -- the winner gets a week at Spacecamp Huntsville, where he or she can learn first-hand about man's conquest of the final frontier.

But none of this can happen without you. Now is the time to get on line, go to http://www.arnewsline.org to download a nominating form, print it and send it in. That way, you and some worthy young ham radio operator will be glad that you did.

SOME BACKGROUND ON THE PRIMARY AWARD SPONSORS

The Young Ham of the Year Award program was created in 1986 by Bill Pasternak, (WA6ITF) and is sponsored by the Amateur Radio Newsline, Inc.. Better known as "ARNewsline(tm) it is the world's largest not for profit (501(c)(3), all-volunteer and totally independent ham radio broadcast news and data information service. It was organized in 1976 as the Westlink Radio Network by Jim Hendershot (WA6VQP) and Bill Pasternak (WA6ITF). Since that time it has produced and aired over 1640 consecutive weeks (31 years) of free news bulletin programming dealing with Amateur Radio and related personal communications issues.

Primary corporate underwriting of the "Young Ham of the Year Award" program is supplied by Vertex-Standard Corporation (Yaesu U.S.A.) and CQ Magazine. Vertex-Standard is a world leader in the design, manufacture and distribution of Yaesu brand high quality Amateur Radio and Vertex brand commercial two-way radio equipment. Since the inception of the award in 1986, this company has been its corporate underwriter.

As of 1995, CQ Publishing has been an additional corporate underwriter. CQ Magazine and its sister publications are owned by CQ Communications and are considered the trend-setting publications serving today's modern radio amateur.

Past recipients of the Young Ham of the Year award are:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston W. VA. (2001)
Josh Abramowicz, KB3GWY, of Reading PA (2002)
Jay Thompson, W6JAY, of Santa Ana CA (2003)
Andrea Hartlage, KB4IUM, of Grayson GA (2004)
Rebekah Dorff, WG4Y, of Birmingham AL (2005)
Catherine Ferry, NC8F, of Silver Lake, OH (2006)
Grant Morine, W4GHM, of Wilmington N.C. (2007)

Emily Stewart, KC0PTL, of Topeka, KS. (2008)
Andrew Koenig, KE5GDB, Houston, TX (2009)

ABOUT THE UNITED STATES AMATEUR RADIO SERVICE

The United States Amateur Radio service is force of over a 600,000 publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster. In the moments immediately following the 911 terror attacks, Amateur Radio volunteers became the first-response communicators in New York City after a major portion of that city's radio system was destroyed. Hams also provided life-saving communications along the U.S. Gulf Coast during and after Hurricane Katrina made landfall in 2005.

From: N2EY@AOL.COM
Message-ID: <981ea5f6-286b-470f-bcc2-c4593e12e4e3@g23g2000vbl.googlegroups.com>
Source record: 1650

These are the number of current, unexpired FCC-issued amateur radio licenses held by individuals on the stated dates, and the percentage of the total number of active licenses that class contains.

Percentages may not add up to exactly 100.0% due to rounding.

These totals do not include licenses that have expired but are in the grace period, nor do they include club, military and other station-only licenses.

Effective April 15, 2000, FCC no longer issued new Novice, Technician Plus and Advanced class licenses, so the numbers of those license classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all existing Technician Plus licenses as Technician. It is therefore informative to consider the totals of the two classes, since the Technician class includes a significant number of Technician Plus licenses renewed as Technician.

On February 23, 2007, the last Morse Code test element, the 5 wpm receiving test, was eliminated as a requirement for any class of US amateur radio license.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%) Technician - 205,394 (30.4%) Technician Plus - 128,860 (19.1%) General - 112,677 (16.7%) Advanced - 99,782 (14.8%) Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%) Technician - 293,508 (44.8%) Technician Plus - 30,818 (4.7%) General - 130,138 (19.9%) Advanced - 69,050 (10.5%) Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of February 22, 2010:

Novice - 16,878 (2.5%) Technician - 335,694 (49.0%) Technician Plus - 115 (>0.1%) General - 151,663 (22.1%) Advanced - 60,586 (8.8%) Extra -

119,806 (17.5%)

Total Tech/TechPlus - 335,809 (49.0%)

Total all classes - 684,742

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433 Technician - increase of 88,114 Technician Plus - decrease of 98,042 General - increase of 17,461 Advanced - decrease of 30,732 Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to February 22, 2010:

Novice - decrease of 32,451 Technician - increase of 130,300 Technician Plus - decrease of 128,745 General - increase of 38,986 Advanced - decrease of 39,196 Extra - increase of 41,056

Total Tech/TechPlus - increase of 1,555

Total all classes - increase of 9,950

>From February 22, 2007, to February 22, 2010:

Novice - decrease of 6,018 Technician - increase of 42,186 Technician Plus - decrease of 30,703 General - increase of 21,525 Advanced - decrease of 8,464 Extra - increase of 11,536

Total Tech/TechPlus - increase of 11,483

Total all classes - increase of 30,062

Is there a point to presenting the statistics?

It appears that the Technician (w/ or w/o HF) class remains approximately half of all licenses actively maintained, and relatively unchanged over 10 years. There are also Novice and Advanced licenses that are being renewed without upgrading (about 10% of all licenses [11.3%]). The average number of Advanced and Extra classes is approximately constant, although there has been a shift from one class to the other.

Is there anything you want to conclude from all of this?

> Is there a point to presenting the statistics?

Actually, there are two:

The first is to provide an archive of the number of hams in the USA.
In the old days we had paper callbooks and CD-ROMs, but as time goes
on dependence on the online databases has become pretty standard.
That's fine for right-now information, but for historical purposes,
what do we do?

By posting the numbers, all it takes is a google search to see trends
and changes. As long as groups are archived, the data will be there
for all to see.

The second reason is to see the results of rules changes and other
influences. I've seen many claims from different people that "ham
radio is dying", "ham radio is growing", "there are X hams in the
USA", etc. By posting actual totals from the same source over a period
of years, the reality becomes apparent.

> It appears that the Technician (w/ or w/o HF) class remains approximately
> half of all licenses actively maintained, and relatively unchanged over 1
0
> years.

Just under half. All Techs and Tech Pluses have had the same
privileges since Feb 2007; there is no difference anymore. Soon the
Tech Plus will completely disappear, as the last one expires in June.

>There are also Novice and Advanced licenses that are being renewe
d
> without upgrading (about 10% of all licenses [11.3%]).

The number of Novices is dropping much more rapidly than the number of
Advanceds. In the past ten years the number of Novices has dropped to
about a third of what it was, but Advanceds are at about 60%.

Ten years ago we had a 6 license class system. Very soon we will have
5 classes, as the Tech Plus disappears. At some time in the future,
when the last Novice expires and isn't renewed, we'll have a 4 class
system.

But it may be a very long time before the last Advanced goes away, giving us a 3 class system, judging by how slowly that class's license numbers are declining.

>&#65533;The average number
> of Advanced and Extra classes is approximately constant, although there h
as
> been a shift from one class to the other.

Which means a lot more US hams have full privileges.

The big gains have come in the General class.

> Is there anything you want to conclude from all of this?

Lots of things can be concluded. Perhaps the most important is the general trend of how many hams we have in the USA, and is the number growing or dropping?

Another purpose is to see how true various predictions have turned out to be. It turns out that predictions of rapid growth and rapid decline were both untrue.

Looking back, ten years ago there were about 675,000 US amateurs. From 2000 to 2003, our numbers grew to about 686,000, then from 2003 to 2007 declined to about 655,000. Since 2007 we've gained over 30,000, and now are almost back to the 2003 peak. If the growth continues, we'll soon have a new all-time high.

Growth is good - we cannot expect to keep our bands and privileges with a constantly declining number of hams. But the growth hasn't kept up with the growth rate of the US population. And despite all the changes in license requirements and privileges, the growth hasn't been anything close to what it was in decades such as the 1930s, 1950s, 1970s and 1980s.

Which pretty means that all the frantic arm waving and cries
of the utter destruction of Amateur Radio due to the no code
changes in the licensing were unwarranted.

The earlier growth of Amateur Radio was due to the "ow wow"
factor when it was new, and then the "we can't let THEM win"
factor during the Cold War.

The current growth is due to "good publicity" concerning the
role Amateur Radio has in emergencies.

As long as we don't come across as a bunch of buffoons or
cranky old men, we should continue to grow.

Maybe. It's only been three years.

Note that after the changes of 2000, we had three years of growth, and then four years of decline. Hopefully that pattern won't repeat, and the growth will continue.

But also note that the predictions of lots of growth have been unwarranted as well.
>
> The earlier growth of Amateur Radio was due to the "ow wow"
> factor when it was new, and then the "we can't let THEM win"
> factor during the Cold War.

I respectfully disagree with that, in many ways.

Sure, the oh-wow factor was there in the early days (before and just after WW1). But note that during the 1920s, when Radio (meaning broadcasting) was the cat's pajamas, amateur radio grew very slowly. There were fewer than 20,000 US amateurs in 1929.

OTOH, during the 1930s the number of US hams almost tripled, despite the Great Depression and much tighter regulation.

The Cold War may have been a factor in the 1950s, but I suspect that the oh-wow factor was still very big then. There was also the increasing affluence of middle-class Americans plus inexpensive WW2 surplus and kits to boost amateur radio. Yet during the 1960s, US ham radio hardly grew at all.

The biggest growth in recent times was during the 1970s and 1980s, despite stagflation, incentive licensing, energy crises, and competition from the cb boom. From the late 1960s to the mid 1980s the number of US hams about doubled. The growth actually went down in the 1990s.

> The current growth is due to "good publicity" concerning the
> role Amateur Radio has in emergencies.

Certainly a factor, but not the only one. Another is the large number of baby boomers approaching retirement age. Yet another is the maturation of the internet - it's an appliance now, not the golly-whiz-bang new thing of a few years ago.

Plus there are so many different things to do in ham radio today!

> As long as we don't come across as a bunch of buffoons or
> cranky old men, we should continue to grow.
>
Hopefully. Another thing that's needed is continued publicity.

But we're still not keeping up with the growth in the US population. Yet.

==> FCC NEWS: FCC ALLOWS ROBOTIC DEVICE IN AMATEUR BAND

In January 2008, a company called ReconRobotics filed a request with
the FCC for a waiver of Part 90 of the Commission's Rules with respect
to the Recon Scout -- a remote-controlled, maneuverable surveillance
robot designed for use in areas that may be too hazardous for human
entry. A waiver is required to permit licensing of the Recon Scout
because the device operates in the 430-448 MHz band, which is allocated
to the Federal Government Radiolocation service on a primary basis, as
well as the Amateur Radio Service and certain non-federal radiolocation
systems on a secondary basis. More than two years later, the FCC
granted the waiver request in the form of an Order (WP Docket No
08-63), subject to certain conditions.

In its comments filed in May 2008, the ARRL called on the FCC to deny
ReconRobotics waiver request, "either permanently or even temporarily."
The FCC noted in the waiver that they had received more than 70
comments "generally consist[ing] of public safety and law enforcement
entities supporting the waiver request, and amateur radio operators
opposing it." In their initial waiver request, ReconRobotics asserted
that even thought the device operates in a in an area allocated to
```

other services, including Amateur Radio, the Recon Scout operates with only 1 W peak power and it is "unlikely to cause interference to these services."

The FCC noted in the Order that they had received more than 70 comments "generally consist[ing] of public safety and law enforcement entities supporting the waiver request, and amateur radio operators opposing it." In their initial waiver request, ReconRobotics asserted that even though the device operates in an area allocated to other services, including Amateur Radio, the Recon Scout operates with only 1 W peak power and it is "unlikely to cause interference to these services." Read more here <http://www.arrl.org/news/stories/2010/02/25/11361/?nc=1>.

==> PUBLIC SERVICE: INJURED COLORADO SKIER USES AMATEUR RADIO TO SUMMON HELP

<http://www.arrl.org/news/images/nms/fullsized/1418.jpg> When Steve Priem, N0YIV, of Boulder, Colorado, decided to go backcountry skiing near Yankee Doodle Lake in the Guinn Mountain area of Colorado's Roosevelt National Forest on Friday, February 19, the 60 year old ham made sure he was well prepared: Not only did he take along a rescue whistle, he made sure his handheld transceiver was fully charged and in his pack.

It's a good thing he did: When Priem was injured while skiing, he used his radio to summon help. According to ARRL Colorado Section Manager Jeff Ryan, K0RM, a ham more than 100 miles away in Colorado Springs answered Priem's call for help and called 911. Priem was able to provide GPS coordinates for his position. Read more here <http://www.arrl.org/news/stories/2010/02/22/11353/?nc=1>.

==> LAUNCH OF NEW ARRL WEB SITE DELAYED TO "GET IT RIGHT"

After meeting with ARRL staff on February 23 -- two days before the new ARRL Web site was to launch -- ARRL Chief Operating Officer Harold Kramer, WJ1B, made the decision to delay the unveiling of the Web site until late March. "Work on the new ARRL Web site has progressed at a frantic pace but there are still some potential 'bugs' that could affect members. We need to be sure we get it right," Kramer said. "Our members' security, information and ability to actually use of all the options on the new site outweigh any rush to meet an artificial deadline. It's just good customer service."

The new Web site -- which will contain the online store, class registrations, audio, video, DXCC information, contest data, individualized member options and other 21st century opportunities for members -- is one of the largest technology upgrade activities that ARRL and Fathom, the company programming the site, have ever undertaken. "Reviewers have been unanimously impressed and are helping make sure we create the easiest, most enjoyable online experience possible," Kramer explained.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, the current ARRL Web site is not only used by ARRL members, but is a prime reference source for engineers, hams and wireless technicians around the world, making it the premier place to find information about Amateur Radio, its activities and the sciences behind it. "The Web is our main face to the world, and the new Web site will be fantastic," he said. "Although we all regret the delay, I believe our members will appreciate our diligence about the ease of use, security and navigation for the new site."

==> ON THE AIR: ARRL DX PHONE CONTEST BRINGS DX IN FULL FORCE TO THE HF BANDS!

<http://www.arrl.org/news/images/nms/fullsized/1419.jpg> With the 2010 ARRL International DX CW Contest now history, the first weekend in March brings the next round of competition: the 2010 ARRL International DX Phone Contest. Like its CW predecessor, this event focuses on DX stations working all US states and Canadian provinces, while US and Canadian amateurs try to work as many DX countries as possible over the 48 hour contest period. Read more here <http://www.arrl.org/news/stories/2010/02/24/11356/?nc=1>.

==> SECTION NEWS: ARRL VIRGINIA SECTION MANAGER ELECTION RESULTS

In the only Section Manager race this winter, Carl Clements, W4CAC, was re-elected as the ARRL Virginia Section Manager. He received 855 votes; his opponent, Glen Sage, W4GHS, received 511 votes. Election ballots were counted February 23 at ARRL Headquarters. Clements, of Portsmouth, starts his new two year term of office on April 1, 2010. In North Carolina, Bill Morine, N2COP, of Wilmington begins his first term as Section Manager on April 1. Section Manager Tim Slay, N4IB, decided not to run again for another term of office, and Morine was the only nominee. Slay has served two terms as North Carolina's Section Manager.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning April 1: Pete Cecere, N2YJZ, Eastern New York; Eric Olena, WB3FPL, Eastern Pennsylvania; Gary Stratton, K5GLS, Louisiana; Bob Schneider, AH6J, Pacific; Steve Early, AD6VI, San Diego, and Scott Rausch, WA0VKC, South Dakota.

==> AMATEUR RADIO DIRECTION FINDING: FOXES, FITNESS AND FUN IN 2010

By ARRL ARDF Coordinator Joe Moell, K0OV

<http://www.arrl.org/news/features/2010/02/24/11358/?nc=1> "Geeks in the woods!" That's how Jay Hennigan, WB6RDV, of Goleta, California, describes Amateur Radio Direction Finding (ARDF). Several times a year, Jay gets together with friends for a session of this international Amateur Radio sport -- also called foxtailing and radio-orienteering. As they set out, five 2 meter "foxes" are somewhere in the woods, transmitting for one minute each in sequence. Armed with a special ARDF set or just a handheld transceiver with a measuring-tape Yagi and attenuator, they see how fast they can run or walk from the start to

each transmitter in optimum order and then back to the start, or perhaps to a separate finish point. To help them navigate, they carry compasses and special orienteering maps, but they aren't allowed to have GPS displays or other high-tech navigation aids. Standardized ARDF courses provide a good test of equipment performance and hunter skill. It's friendly competition combined with great exercise. It attracts "techies" and "jocks" of all ages who don't need a ham license to get started. And for some, it leads to medals at national and international competitions. Read more here <http://www.arrl.org/news/features/2010/02/24/11358/?nc=1>.

==> INTERNATIONAL NEWS: ICELAND AMATEURS RECEIVE NEW PRIVILEGES

As of Friday, February 19, Iceland's Post and Telecom Administration (PTA <http://www.pta.is/Default.aspx?cat_id=101>) granted temporary experimental access to the 4 and 600 meter bands at least through the end of 2010, according to Islenzkir Radioamatorar (IRA <http://www.ira.is/pages/viewpage.action?pageId=4194372>) President Jonas Bjarnason, TF2JB; the ITA is Iceland's IARU <http://www.iaru.org/> Member-Society. After obtaining a special license from the PTA, Bjarnason said that TF stations with "N" or "G" class licenses may now operate between 493-510 kHz and 70.000-70.200 MHz running 100 W. Amateur operations on both bands are granted on a secondary basis.

==> W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

Beginning Monday, March 15, W1AW <http://www.arrl.org/w1aw.html>, the Hiram Percy Maxim Memorial Station, will alternate the digital modes used for its digital bulletin transmissions. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, W1AW Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16. "Because of time constraints and the varying lengths of digital bulletins, there were many instances where only Baudot was used," he said. "With the new schedule, amateurs preferring either PSK31 or MFSK16 will no longer find these modes secondary." Read more here <http://www.arrl.org/news/stories/2010/02/16/11343/?nc=1>.

==> SOLAR UPDATE

Tad "Late lies the wintry Sun a-bed <http://www.poemhunter.com/poem/winter-time/>" Cook, K7RA, reports: The unbroken string of sunspots continues. Two new groups -- 1050 and 1051 -- appeared in the past two days, and we've now had 36 continuous days with sunspots. Prior to that, there is just a single day once in a while with no spots. The last time we had more than one day of no sunspots was a few months ago, November 23 through December 8. Look for more information on the ARRL Web site on Friday, February 26, including a discussion about an increase in reports of 10 meter activity, and a "reverse beacon network" that uses CW skimmers to automatically check many frequencies from many locations, and then list the calls heard on

a Web site. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Robert Louis Stevenson's Winter Time <http://www.poemhunter.com/poem/winter-time/>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> W1AW NEWS: MARCH W1AW/WEST COAST QUALIFYING RUN SCHEDULE

The March schedules for the W1AW and West Coast Qualifying Runs were inadvertently left out of the March issue of QST. The March schedules for W1AW are as follows: Friday, March 5 at 10 PM EST (Saturday, March 6 at 0300 UTC) for 10-25 WPM and Tuesday, March 16 at 7 PM EDT (2300 UTC) for 10-40 WPM. The West Coast Qualifying run will be transmitted by station K6KPH on Saturday, March 13 at 2 PM PDT (2200 UTC) for 10-35 WPM. The run will be transmitted simultaneously on 3581.5, 7047.5, 14047.5, 18097.5 and 21067.5 kHz.

==> THIS WEEK ON THE RADIO

This week, look for an NCCC Sprint Ladder on February 26. The Russian PSK WW Contest and the CQ 160 Meter Contest (SSB) are on February 26-27. The REF Contest (SSB), the EPC WW DX Contest, the UBA DX Contest (CW), the Mississippi QSO Party and the North American QSO Party (RTTY) are all on February 27-28. The High Speed Club CW Contest is February 28. The North Carolina QSO Party is February 28-March 1. The ARS Spartan Sprint and the AGCW YL-CW Party are both on March 2. Next week, look for the ARRL International DX Contest (SSB) <http://www.arrl.org/contests/rules/2010/intldx.html> on March 6-7. The Wake-Up! QRP Sprint is March 6 and the DARC 10 Meter Digital Contest is March 7. The CLARA HF Contest is March 9-10 (continuing on March 13-14) and the CWops Mini-CWT Test is March 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1698 - February 26, 2010

Amateur Radio Newsline report number 1698 with a release date of
Friday, February 26th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. RACES is reborn in Illinois, the FCC puts a
rescue radio robot right in the middle of the 70cm ham band, an HT call
leads to a rescue in a skiing accident, a ham radio hero from India to
meet with the United Kingdom's Royal Family, Iceland gives its hams 4
meters and I-A-R-U Region 3 decides to adopt the Japanese Yen as its
only exchange currency. Find out the reason why on Amateur Radio
Newsline(tm) report number 1698 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: RACES IS REBORN IN ILLINOIS

Rescue radio using ham operators has been given a new lease on life in
Illinois. This, with a compact between the Illinois Emergency
Management Agency and amateur radio operators throughout the state for
them to provide an additional layer of emergency communications during
disasters. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the
details:

--

Illinois Emergency Management Agency director Andrew Velasquez III is
praising the agreement and those who will become part of it. Velasquez,
quoted in a news release issued jointly by Governor Patrick Quinn's office
and the IEMA, says the state is "very fortunate to have a dedicated group
of volunteer amateur radio operators who are willing to donate their time
and expertise to help make Illinois safer." Velasquez noted the agreement
will further strengthen the state's communications interoperability plan -
which includes layers of redundant communications.

Brad Pioveson, W9FX, of Benton, has been appointed volunteer state officer
for the reconstituted Radio Amateur Civil Emergency Services program.
According to the IEMA, he'll be serving as a single point of contact
between the state office and the state's amateur radio community.

In addition to throwing its support behind amateur radio as an integral
part of emergency communications in Illinois, the state EMA also agreed to
equip a RACES station with equipment and resources needed to maintain both
wired and wireless communications with the state emergency operations

center in Springfield - this during emergencies. Pioveson says there are some 20-thousand licensed hams in the state, many of whom are part of what he called "a very rich history of providing emergency communications" for Illinois.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Illinois ARRL Section Manager Thomas Ciciora, KA9QPN, gave his personal thanks to W9FX, K9DUE, N9LQF, and the other folks whom he may have inadvertently forgotten but who helped to make this dream into a reality. (KA9QPN)

**

RADIO LAW: FCC TO PERMIT RESCUE RADIO ROBOT IN THE 430 TO 450 MHz BAND

The FCC has issued a waiver of the Part 90 rules to permit a company called Reconrobotics Incorporated to sell a remote controlled security robot that will operate in the 430 to 448 MHz band. This is spectrum that is primary to the Federal Radiolocation Service but also encompasses the Amateur Service weak signal, satellite and repeater subbands.

The waiver permits Reconrobitics to manufacture and sell a device called the Recon Scout. This is described as a device designed for state and local law enforcement and firefighting agencies, and security personnel in critical infrastructure industries. The Recon Scout can be thrown, dropped, or launched into potentially hazardous areas and can provide real-time video to an operator located a safe distance away. Typical applications will include such things as checking a building prior to forced entry, searching vehicle undercarriages for explosives and searching for survivors in a burning structure.

The Recon Scout transmits the analog video signal to the operator on one of three six megahertz channels. These are 430 to 436 MHz, 436 to 442 MHz, and 442 to 448 MHz. Reconrobotics says that multiple channels are necessary in order to avoid interference during incidents where multiple Recon Scouts are in use, but that such situations should be rare.

The company's now approved proposal is that the first unit sold to a responding organization would operate on 442 to 448 MHz. That happens to be where thousands of ham radio repeaters operate. The 436 to 442 MHz version being sold only to entities that already own the 442 to 448 MHz version, and the 430 to 436 MHz version being sold only to entities that already own both of the others.

In approving the waiver, the FCC told Reconrobotics . the Recon Scout will have to operate on a secondary basis where it cannot cause interference and is not protected from interference to all Federal users and licensed non-Federal users including radio amateurs. The FCC also warned prospective users that operation of the Recon Scout in an unauthorized manner will subject licensees to Commission enforcement action and license

revocation. It also said that widespread improper use of the device could lead the Commission to stop granting or renewing Recon Scout authorizations. More on this next week.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles. (FCC, QRZ.com)

**

RESCUE RADIO: HT CALL BRINGS HELP TO DOWNED SKIIER

A Colorado backcountry skier who injured himself in a fall west of Eldora Mountain Resort was rescued. This, after using a handheld amateur radio transceiver to call for help.

Boulder County sheriff's officials say 60-year-old Steve Priem, N0YIV, of Boulder used the radio after falling Friday afternoon, Friday, February 19th. According to the on-line Colorado Connection, another unidentified ham radio operator about 120 miles away heard Priem's request for assistance and called 911. Rescue teams were dispatched with part of the coordination taking place using amateur radio simplex frequencies and area repeaters.

N0YIV was able to provide rescuers with GPS coordinates for his position and had with him a rescue whistle. He was treated at a hospital for non-life-threatening injuries. Sheriff's officials described Priem as an experienced backcountry skier who was well prepared for almost any emergency. (ColoradoConnection, ARNewsline(tm))

**

RESCUE RADIO: HAM HERO VU2RBI TO MEET WITH UK ROYAL FAMILY

One of the worlds most decorated hams has been invited to meet with the British Royal Family. Steve Herman, W7VOA, is in New Deli, with the details:

--

VU2RBI, Bharathi Devulapalli Prasad, announced on her Facebook page (Feb. 22) that she has been invited to speak at the Commonwealth Day Observance in London in March 8th in the presence of HM The Queen, HRH Duke of Edinburgh, the Prince of Wales, the Duchess of Cornwall and all Commonwealth High Commissioners. She says she will be talking to the distinguished group about science technology and society, which she says will include her personal experiences on ham radio.

Bharati, one of ham radio's most prominent YL's, has won several significant international awards related to her service to society by using amateur radio. She was part of the Andaman DX'pedition team that won the ARRL's 2005 International Humanitarian Award. The December 2004 earthquake and resulting tsunami that devastated South Asia coastal areas swiftly shifted the role of the DX operation into an emergency communication link with India's mainland.

For the Amateur Radio Newsline, I'm Steve Herman, W7VOA, in New Deli.

--

VU2RBI is active on HF CW and SSB from her shack in New Delhi. Her husband and two children are also licensed radio amateurs as well. (W7VOA)

**

RESTRUCTURING: ICELAND ON 4 METERS AND 600 METERS

Hams in Iceland now have access to both the 4 meter and 600 meter bands. On February 19th the Icelandic Post and Telecom Administration granted a temporary experimental access to the 70.000 to 70.200 MHz through December 31st. Access is on secondary basis with a maximum bandwidth is 16 kHz and power limit is 100 watts.

At the same time, the Post and Telecom Administration granted a temporary experimental access to the 600 meter band also valid until December 31st. The allotted frequency span is 493 to 510 kHz. On a secondary basis using CW only at a power limit of 100 watts.

In both cases current amateur licensees need to apply to the Post and Telecom Administration for a special experimental permit. This is open to both Icelandic "N" and "G" license classes. (TF2JB)

WORLDBEAT: IARU REGION 3 ADOPTS YEN ONLY ACCOUNTING

No more US dollars for International Amateur Radio Union Region 3. At the last IARU Region 3 Conference, it was voted that all accounts of the Region would now be maintained only in Japanese Yen and not in the two currency system of US Dollars and Japanese Yen as has been done for many years. The reasoning was that all accounts are maintained in Tokyo and the old system involved a double currency conversion that in many cases resulted in losses before it was credited to the IARU Region 3 banks. All subscriptions to Region 3 from member societies will also now be calculated in Japanese Yen only. (Southgate)

RADIO LAW: STUDY SAYS MOBILE CELLPHONE BANS WORK BEST IN URBAN AREAS

A new study on the effectiveness of banning mobile operation of non hands free cellphone use has concluded that they work best in urban areas. Bruce Tennant, K6PZW, has more:

--

A new investigation aimed at analyzing the impact of hand-held cell phone legislation on driving safety concludes that usage ban laws are having more of an impact in densely populated urban areas with a higher number of licensed drivers than in rural areas where there are fewer licensed drivers.

The study, conducted by Sheldon Jacobson, a professor of computer science and the director of the simulation and optimization laboratory in Illinois, analyzed the relationship between pre- and post-law automobile accident rates using public data from 62 counties in New York. He and his team found that after banning hand-held cell phone use while driving, 46 counties in New York experienced lower fatal accident rates. 10 of these did so at a statistically significant level, while all 62 counties experienced lower personal injury accident rates.

Jacobson and his team of researchers also discovered that the personal injury accident rate decrease was more substantive in counties such as Bronx and Queens New York. These are also boroughs in New York City proper where there was a high density of licensed drivers rather than in sparsely populated areas of upstate New York.

Jacobson and co-researchers published their results in an article titled "Evaluating the Impact of Legislation Prohibiting Hand-Held Cell Phone Use While Driving," which will appear in a forthcoming issue of the journal Transportation Research Part A: Policy and Practice.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Now, we do not want to sound like know it all's nor belittle the word of these researchers, but it does seem reasonable to assume that where there are more people using cellphones that banning their hand held use while in motion will result in fewer accidents. Also that the rates of decrease would be greater where there are more cars, more cellphones and more people using both. (Science OnLine)

RESCUE RADIO: FCC SAYS YES TO 97:113 WAIVER REQUEST FROM SONAMA COUNTY HEALTH SERVICES

The waivers to Section 97:113 of the Amateur Service rules to permit paid employees to take part in disaster training exercises continues. This with a February 16th letter from the FCC granting a request from the County of Sonoma Department of Health Services in Santa Rosa, California to utilize about a half dozen hams in its employ to take part in monthly radio-check disaster preparedness drills. Specifically, the FCC says that the County of Sonoma Department of Health Services can use the services of the ham radio volunteers in its employ. This for events slated for on March 10, April 14, May 12, June 9, July 14, August 11, September 8, October 13, November 10, and December 8th of this year.

The County of Sonoma Department of Health Services filed the waiver request for these exercises back on November 25th, 2009. In granting the request the Scot Stone, who is the Deputy Chief of the FCC's Mobility Division concluded that the waiver request was appropriate under the circumstances presented. Each drill is scheduled to last two hours. (FCC)

**

ENFORCEMENT: COURT TO RE-EXAMINE WARDROBE MALFUNCTION FINE

A federal appeals court says that it will re-examine the FCC fine it threw out against CBS over Janet Jackson's "wardrobe malfunction" during the 2004 Super Bowl halftime show. The 3rd U.S. Circuit Court of Appeals in Philadelphia issued a statement on Tuesday, February 23rd saying that it will consider whether the FCC's $550,000 fine against the broadcaster over the breast-baring performance was a punishable violation of the Commissions rules.

In 2008 the lower court threw out the penalty saying the FCC acted arbitrarily and capriciously in issuing the fine for the half-second of nudity. However in 2009 the Supreme Court on appeal from the FCC ordered the lower court to consider reinstating the fine, following a ruling in another case that said the FCC could threaten fines even for fleeting profanity. (Published news reports)

RESTRUCTURING: A SNEAK PEAK AT THE FCC NATIONAL BROADBAND PLAN

With the FCC scheduled to deliver its long awaited National Broadband Plan to Congress next month, the FCC released a sneak preview of the plan. It reveals what can best be described as a group of sweeping and ambitious proposals it hopes Congress will support.

The recommendations released in a 56 page report cover a variety of proposals ranging from efforts to spur job creation and improve energy independence to improving healthcare and controlling its costs. The plan also calls for constructing an interoperable nationwide wireless public safety network.

Other proposals seek to improve the delivery of education services and enhance government performance. The preview document provides details of what may be included in the massive report the FCC plans to deliver to Congress on March 17th. (Information Week)

ELECTRONIC HAPPENINGS: ALL LION BATTERIES MAY BE BANNED FROM CHECKED AIRLINE BAGGAGE

Traveling by air with spare Lithium Ion batteries for your H-T could soon become impossible. This as Computer World reports that the United States Department of Transportation may prohibit the transport of all spare batteries in checked luggage, regardless of their physical size or capacity.

Lithium-ion cells rated at 100 watt-hours and smaller were previously exempt, but new proposed rules would eliminate the exception. The tighter rules would affect smaller professional video cameras along with a host of consumer electronics devices, from the P-D-A's to audio players and even some hearing aides. Basically any device that uses Lithium Ion cells as a power source.

Computer World dug further into incidents of Lithium Ion battery-related accidents reported on aircraft. It found that based on the number of batteries shipped, injuries during a flight due to battery-related accidents were about one in 28 million in 2008. While not very many in number, still enough percentage wise to concern the Department of Transportation and likely prompt the proposed ban. (Computer World, TV Business, others)

THE CHANGING OF THE GUARD: BILL GORDON -DESIGNER OF ARECIBO RADIO TELESCOPE - SK

The designer of the giant radio-telescope at Arecibo, Puerto Rico, has passed away. This with word that astronomer and engineer who Bill Gordon, who designed the array that spotted the first planets beyond our solar system and lakes on one of Saturn's moons died February 16th in Ithica, New York, at age 92.

Gordon designed the Arecibo Observatory's radio telescope in the 1950's as a 1,000-foot-wide dish set in a sinkhole surrounded by forested hills. Within a year of opening, it was used to determine the planet Mercury's period of rotation.

After radio pulsars were discovered in 1967 the observatory played a prominent role in studying their properties Astronomers Joseph Taylor, K1JT, and Russell Hulse used the Arecibo telescope to discover the first binary pulsar in 1974 and leading to their 1993 Nobel Prize in physics. In 1990, Polish astronomer Aleksander Wolszczan used the telescope in the discovery of a pulsar in the constellation Virgo that was shown to be orbited by the first known planets beyond Earth's solar system.

Bill Gordon was born in Paterson, New Jersey. He earned a bachelor's degree from Montclair State Teacher's College, a master's degree from New York University and his doctorate at Cornell. He was a professor and administrator at Rice University in Texas from 1966 until his retirement in 1985. (Southgate, others)

EMERGING TECHNOLOGY: HIGH EFFICIENCY ORGANIC SOLAR CELLS DEVELOPED

Scientists at the Department of Microsystems Engineering and the Freiburg Materials Research Center have succeeded in developing a method for treating the surface of nanoparticles which greatly improves the efficiency of organic solar cells. The researchers were able to attain an efficiency of 2 percent higher than previously expected by using so-called quantum dots composed of cadmium selenide.

Organic solar cells belong to the so-called third generation of solar cells and are still in the developmental stage. The world record for purely organic solar cells in which both components of the photoactive layer consist of organic materials is currently at 7 percent through wet chemical methods.

Organic solar cells have many advantages over the conventional silicon cells typically used for large-scale energy production. Not only are they are considerably thinner and more flexible but are also less expensive and quicker to produce. As such, they are well suited for powering everyday devices which are not in constant use such as sensors or electrical appliances.

The procedure to produce these new cells has been patented and the results were published in a recent issue of the journal Applied Physics Letters. (ScienceDaily)

WORLDBEAT - USA: W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

The ARRL says that beginning Monday, March 15th tat its W1AW digital bulletin transmissions will alternate the modes used. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16.

The digital bulletin times remain at 6 and 9 p.m. daily Eastern Time. More on this change is on-line at www.arrl.org/news/stories/2010/02/16/11343/?nc=1 (ARRL)

**

HAM RADIO IN SPACE: ARRISAT DESIGN MEETING HELD IN ORLANDO

Turning to ham radio space related news, word that an ARISSat Design Review meeting was held in Orlando, Florida on February 15th and 16th. The gathering was reportedly successful in identifying areas that need additional work and definition. The major items are the Max Power Point Tracker, the interconnect board, finding ways of creating a warmer environment for the battery and power management software and internal housekeeping software. Thirteen members attended the meeting and gave 23 presentations concerning the status of ARISSat-1. Links to the presentations will be posted soon. See: http://www.amsat.org/amsat-new/index.php (ARISS)

**

HAM RADIO IN SPACE: COLLEGE SATELLITE NIGHT

Something new on the ham sats for those in institutions of higher learning. College Satellite Night is planned for all available satellites on the first Thursday of each month. College club stations should consider on being on AO51, SO50, AO7, VO52, HO-68 and FO-29 to welcome student operators and enjoy QSO's with them. It's a great way to introduce newcomers to the fun of working the ham radio birds.
(ANS)

**

HAM RADIO IN SPACE: SCOTLAND ON ALL THE HAMSATS

Scotland is going to the birds, at least figuratively speaking. This as 2E1EUB will once again be active as 2M1EUB from March 20th to the 27th operating every ham radio satellite that he can reach from the Cairngorms National Park. Also, look for him on 160 and 80 meters. Checkout QRZ.com under 2M1EUB for more information on this high in the sky operating event. (OPDX)

**

HAM RADIO IN SPACE: SATELLITE OPERATION FROM THE DRY TORTUGAS

And still with our eyes to the sky, word that the upcoming K4T DXpedtion to the Dry Tortugas web page says the team plans to include satellite operations. Team leader Mike Forsythe, AC2V says that one of the primary stations will be dedicated to satellite operations on a 24 hour basis. Mark Hammond, N8MH will be heading up K4T satellite operations. The The DXpedition is slated for March 11th to the 15th. More information and QSL routing is at aroadventures.org. (via e-mail)

**

ON THE AIR: THE REVERSE BEACON NETWORK

More down to Earth, a new amateur radio reverse beacon network has been established as a new way to observe and report on propagation conditions world-wide. Unlike the most DX alerting beacons that transmit at set time intervals the reverse beacon network relies on volunteer stations to monitor various bands and report what they hear over the groups website.

Currently, there are a few dozen stations involved. Some monitor around the clock while others up only occasionally. More on the network, how it operates and how you can become a part of it is on line at www dot reversebeacon dot net. (Southgate)

**

ON THE AIR: A FERRY GOOD IDEA

And you might also want to listen out for special event call GB2EI standing for Great Britain to Ireland. Its on the air to celebrate the reintroduction of the Swansea to Cork Ferry service. The original service

commenced in 1896. A similar station, EI2GBW, will also be operating from Cork. Both special event callsigns will be operational until March 31st of 2010. QSL details are available at qrz.com. (Southgate)

**

DX

In DX, word that UA3DJY, who was has been operating as 5I3A from the DIT Communications Club station in Dar Es Salaam, Tanzania, has finally received his own callsign. He is now active as 5H3ACR and will be there until March 1st and says that he will try to be active on all bands. QSL via RK3AOL.

A DXpedition is being planned to operate from the Laguna Grande de la Sierra, Columbia. The callsign will be 5K7SNC. Announced dates are April 1st and 2nd on 7140 kHz only. QSL via HK3OCH. For more details and possible updates please visit QRZ.com under the callsign 5K7SNC.

IK5ZUI, will be active as 5R8UI from Nosy Be Madagascar starting early March. He will be there up to a year. No QSL information as we go to air.

DJ7RJ will be active portable SV5 from the island of Kos through March 17th, He is operating 160 through 6 meters using CW and SSB, QSL direct to his home call.

HA5AO, will once again be active as 7P8AO from Lesotho between March 8th and the 22nd. His operation
will be on 80 through 10 meters using CW, SSB and RTTY. QSL electronically via Logbook of the World or via HA5AO direct or through the bureau.

UX4UL will be active as 8Q7IA from the Maldives through May 18th. Activity is mostly CW and PSK.. QSL via UY5ZZ.

A German team of operators will be active from Burundi through March 6th. Operations will be on CW, SSB and RTTY. QSL as directed on the air.

Lastly, members of the Malaysia Amateur Radio Transmitters Society will activate the "Southern Most Tip of the Asia Mainland" between February 26th and the 28th using the call 9M4STE. Activity will be on 40 through 6 meters using CW and SSB. For more details and updates, visit their Web page at dxpeditionmalaysia.blogspot.com.

(Above from various DX news sources)

**

THE SOCIAL SCENE: A HAM RADIO FAS-DO-DO IN LOUISIANA IN MARCH

And speaking of true ham radio social events, there's one coming soon to Louisiana that you will not want to miss. Newsline's Don Wilbanks, AE5DW, lives near-by and tells us why:

--

It's party time down the bayou! The combined ARRL Louisiana State Convention and 50th Acadiana Amateur Radio Association Hamfest is slated for Friday and Saturday, March 12th and 13th at the Rayne Civic Center in Rayne, LA.. This years special guest is ARRL Headquarters Club Coordinator Norm Fusaro, W3IZ. And as always this event will host the annual Friday Crawfish Boil with the popular Fais-Do-Do and dancing afterwards.

For those who've never been to South Louisiana, a Fais-Do-Do is a party held in the evening after the kids go to bed. "Do do" is Cajun French slang
for sleep, as in telling the kids to "go do do" and "fais" is a negative in
Cajun French, so Fais-Do-Do literally means "no sleep".

As the locals say, "you'll pass a good time, cher!"

More on this Louisiana style fun ham radio event is on-line at www dot w5ddl dot org slash hamfest.

From bayou country I'm Don Wilbanks, AE5DW for the Amateur Radio Newsline.

--

Now this sounds like the kind of ham radio gathering that should be fun all day and all night long. (NA5Q, AE5DW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot

com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson,
KQ6FM, saying 73 and we thank you for listening.

>Maybe. It's only been three years.

The no-code-test Technician class license existed since 1991.

>Note that after the changes of 2000, we had three years of growth, and
>then four years of decline. Hopefully that pattern won't repeat, and
>the growth will continue.

The growth of USA amateur radio licensing has been miniscule since
2006. Using www.hamdata.com statistics for the period of 18 May 2006
through 18 Nov 2009, there were a total of 95,465 NEW licensees and a
total of 95,702 EXPIRATIONS. That is from referece material for an
e-ham.net article published at the endof 2009.

>But also note that the predictions of lots of growth have been
>unwarranted as well.

I have yet to see a specific quote from anyone who "predicted lots of
growth." At best there were a few who optimistically wanted more
growth. I was not one of those nor in the habit of "predicting"
anything, only trying to show TRENDS.

>The Cold War may have been a factor in the 1950s, but I suspect that
>the oh-wow factor was still very big then. There was also the
>increasing affluence of middle-class Americans plus inexpensive WW2
>surplus and kits to boost amateur radio. Yet during the 1960s, US ham
>radio hardly grew at all.

The "Cold War" existed from 1948 to 1991 and the dissolving of the
Soviet Union. The first wide release of WWII surplus electronics to
local electronics stores was 1947. There was also the factor of the
meteoric rise of Television beginning in 1947, drawing
consumer-electronics manufacturers into that market. Even Hallicrafters
and National Radio Co. were making TV receivers in that time. By about
1959 established radio makers and many start-ups were entering the

Class D CB market which would almost equal TV receiver production.

>> The current growth is due to "good publicity" concerning the
>> role Amateur Radio has in emergencies.
>
>Certainly a factor, but not the only one. Another is the large number
>of baby boomers approaching retirement age. Yet another is the
>maturation of the internet - it's an appliance now, not the golly-whiz-
>bang new thing of a few years ago.

The Internet went public in 1991, 19 years old, not "a few years ago". Compuserve and other network message providers were in existance before the Internet and Personal Computers were in existence on them by 1978 (text-only for the most part).

Back in 30 December 1990 Richard Hoffbeck, N0LOX, made a study of the amateur radio license classes and ages as of the FCC database of November 1988. That data was sent to Fritz Anderson, WT9T (no relation) over what I think was Compuserve (or another network). Both N0LOX and WT9T were in the FCC database as of 13 Dec 2009. Of the (then) 5 classes in the USA, the average age of Novices was 42.19, the oldest average age was Advanced with 56.26. The total number of licensees was 480,191 in Nov 88. Note: A birthdate was required by the FCC in 1988.

>Plus there are so many different things to do in ham radio today!

Except that the code test for all licensees except the no-code- test Technician was KEPT until 23 Feb 07 and the Technician class currently has the GREATEST population of all despite its start in 1991.

>> As long as we don't come across as a bunch of buffoons or
>> cranky old men, we should continue to grow.
>
>Hopefully. Another thing that's needed is continued publicity.

Publicity isn't generated by sitting around in amateur radio venues congratulating one another. There is MINISCULE publicity generated in mass media to inform the PUBLIC. New licensees aren't all coming from "ham families." Hobbyists in electronics are enjoying all sorts of activities besides amateur radio. One out of three Americans have cell phones, one out of five has some Internet access. Both of those can reach around the world (or in the neighborhood) 24/7. They don't need to out-guess the ionosphere to use a 160-year-old telegraphic technique.

The ARRL has existed since before WW One yet it has not caused a blip in any Mass Media TV or Radio markets with all of its "prepared high-quality broadcast material." Look in cable TV program listings. Most of us in the Public are asleep in the 1 AM to 6 AM "public service" time slots.

>But we're still not keeping up with the growth in the US population.
>Yet.

USA amateur radio license numbers are STATIC, essentially un- changing
down in "statistical noise" or random variations.

Len, K6LHA

237. Emergency Frequencies for Chile Relief

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-01 18:51:21 UTC
From: Dick Grady AC7EL <rng@richbonnie.com>

Source record: 1459

http://www.arrl.org/?artid□53

IARU Region 2 and Radio Club de Chile Request Amateurs to Keep Emergency Frequencies Clear (Feb 27, 2010) -- A massive 8.8 magnitude earthquake hit Chile today at 0634 UTC, triggering a potential tsunami. IARU Region 2 and the Red Chilena Nor Austral de Servicio (RECNA) have suggested Amateur Radio operators monitor the following emergency communications frequencies for traffic pertaining to the earthquake and tsunami: 3.738, 3.750, 7.050, 7.100, 14.200, 14.350, 21.200, 21.350, 28.300 and 28.500 MHz. IARU Region 2 Area Emergency Coordinator Jorge Sierra, LU1AS, reports that there is now traffic at frequencies of 40 meters from people seeking information from people in Chile: ï¿½We would appreciate if amateurs would leave free the frequencies used by RECNA, as well as the usual IARU Region 2 frequencies on in 20, 40, and 80 meters.ï¿½ In addition to the above frequencies, you may also want to listen to the worldwide emergency communication Center of Activity frequencies: 14.300, 18.160 and 21.360 MHz. Other suggested monitoring frequencies are 3.720, 7.045 and 7.060 MHz. Hawaiian Amateur Radio operators on the lookout for a possible tsunami are monitoring 7.088 and 3.888 MHz. -- Thanks to Radio Club de Chileï¿½s (RCC) Emergency Coordinator Aldo Oppici, CE3WAD, and W2VU, KI6SN, K3ZO, PY2ZX, PY5YA and El Grupo Argentino de Radiotelegrafia for the information.

239. Tiny antennas from new technology?

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-03 14:45:12 UTC
From: Howard Lester <howardxtlester@verizon.net>
Message-ID: <hmlsl7$bq3$1@news.eternal-september.org>
Source record: 1461

"Engineered metamaterials enable remarkably small antennas"

Check this out. Although the experiments were, um, conducted at UHF, I wonder if this development will have any implications for future HF antennas, especially for those who have to live with CC&R's!

http://www.physorg.com/news183753164.html

The text is provided below.

Howard N7SO

NIST engineers are working with scientists from the University of Arizona (Tucson) and Boeing Research & Technology (Seattle, Wash.) to design antennas incorporating metamaterials—materials engineered with novel, often microscopic, structures to produce unusual properties. The new antennas radiate as much as 95 percent of an input radio signal and yet defy normal design parameters. Standard antennas need to be at least half the size of the signal wavelength to operate efficiently; at 300 MHz, for instance, an antenna would need to be half a meter long. The experimental antennas are as small as one-fiftieth of a wavelength and could shrink further.

In their latest prototype device, the research team used a metal wire antenna printed on a small square of copper measuring less than 65 millimeters on a side. The antenna is wired to a signal source. Mounted on the back of the square is a "Z element" that acts as a metamaterial—a Z-shaped strip of copper with an inductor (a device that stores energy magnetically) in the center (see photo).

"The purpose of an antenna is to launch energy into free space," explains NIST engineer Christopher Holloway, "But the problem with antennas that are very small compared to the wavelength is that most of the signal just gets reflected back to the source. The metamaterial makes the antenna behave as if it were much larger than it really is, because the antenna structure stores energy and re-radiates it." Conventional antenna designs, Holloway says, achieve a similar effect by adding bulky "matching network" components to boost efficiency, but the metamaterial system can be made much smaller. Even more intriguing, Holloway says, "these metamaterials are much more 'frequency agile.' It's possible we could tune them to work at any frequency we want, on the fly," to a degree not possible with conventional designs.

The Z antennas were designed at the University of Arizona and fabricated and partially measured at Boeing Research & Technology. The power efficiency measurements were carried out at NIST laboratories in Boulder, Colo. The ongoing research is sponsored by the Defense Advanced Research Projects Agency.

Well, the old saying "you cannot change physics" will still apply.
Getting something to launch energy into space is not that hard, even
dummy loads do that. Making it an efficient process is a bit more
difficult. The ISOTRON antennas do "work" (I own three of them) but
they are really poor devices for launching energy into space (unless
you count heating the attic). They work better than my dummy load,
but not by that much considering what they cost.

Don't we already have 1/4 wavelength verticals that are pretty good at
launching energy into free space? The article says they can cut that
down to 1/5 wavelength. That takes a 10 Meter antenna and makes it
into an 8 meter antenna, whatï¿½s the big deal with that?

Does somebody know the maximum efficiency of a 1/4 wave vertical and
how does that compare to 95%? (Even with almost perfect ground
resistance?)

I'm thinking they may have succeeded in making a low resistance
material that cuts down on IR losses, but I got a feeling the advanced
materials will be way to expensive to use for your average HF rig
running 100 W given the efficiency and cost of what we already have.

It's right up around there.

Anyhow, if they have managed to make this antenna extremely efficient, what they must have done is make the RF resistance not become much lower as the physical size goes down. Some other possibilities are that they somehow managed to make the Velocity factor really low, maybe 25 percent.

Seems like once a year or so, some outfit makes some claims like this. A couple years ago it was a University on the east coast announcing a antenna that was so efficient that the original one burned up when they sent a hundred watts through it. I personally think that is speaking to inefficiency, but I'll note that statement was removed from the press release.

I'll believe it when I see it.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- held later
this year in El Salvador -- brings together delegations from the
national Amateur Radio Societies in the Western Hemisphere. One of the
topics on the agenda will be the Region 2 HF band plan. This band plan
is "harmonized with" -- spectrum management-speak for "very similar to"
-- the IARU Region 1 and Region 3 band plans. At this year's
conference, the IARU Member-Societies will consider possible changes to
the Region 2 band plan. The ARRL is cooperating with this procedure by
inviting input to be sent to the ARRL Board of Directors' Band Planning
Committee. The committee will review the existing Region 2 band plan,
```

consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> PUBLIC SERVICE: RADIO CLUB DE CHILE ACTIVE AFTER EARTHQUAKE

On Monday, March 1, IARU Region 2 <http://www.iaru-r2.org/> President Reinaldo Leandro, YV5AMH, spoke via telephone with Radio Club de Chile (RCCH <http://www.ce3aa.cl/>) President Dr Galdino Besomi, CE3PG, regarding the 8.8 magnitude earthquake that struck the South American nation on Saturday, February 27. "He informed me that soon after the earthquake, an Emergency Net was activated in the whole country -- first on VHF and then on HF. All the RCCH Board and club members are actively working in close coordination with civil and military authorities," Leandro posted to the IARU Region 2 e-mail reflector. "Three days after the earthquake, the requests for news about people in the affected areas is one of the main activities occupying the Chilean radio amateurs."

==> PUBLIC SERVICE: HAWAII HAMS SPURRED TO ACTION BY CHILEAN EARTHQUAKE

On Saturday, February 27 -- in reaction to a tsunami warning triggered by the Chilean earthquake -- 60 Amateur Radio operators participated in a tsunami radio net that operated throughout the island State of Hawaii. More than 25 real-time reports from observers around the state were relayed simultaneously to the State Emergency Operating Center (EOC) and the four county EOCs, providing timely information via Amateur Radio on sea level changes to emergency management officials. Read more here <http://www.arrl.org/news/stories/2010/03/01/11368/?nc=1>.

==> FCC NEWS: FCC SEEKS COMMENTS FOR BLANKET WAIVER TO ALLOW AMATEUR RADIO IN HOSPITAL EMERGENCY DRILLS

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored."Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Read more here.

==> FCC NEWS : FCC DENIES ARRL'S REQUEST FOR DECLARATORY RULING

In 2005, after the State of Florida adopted statutes aimed at pirate broadcasters and making it a felony to make a radio transmission

without Commission authorization or to interfere with a licensed public or commercial radio station, the ARRL -- through General Counsel Chris Imlay, W3KD -- filed a Request for Declaratory Ruling (Request) with the FCC, seeking a declaratory ruling on portions of that statute. The ARRL argued that the statute was written so broadly that one could infer that Commission-licensed Amateur Radio stations in Florida would be subject to felony prosecution if their transmissions interfered with broadcast or other radio receivers. In 2006, New Jersey adopted a similar statute and the ARRL's Request was modified to include that state. Five years and one day after the original Request was filed with the Commission, the FCC denied the Request. Read more here <http://www.arrl.org/news/stories/2010/02/28/11365/?nc=1>.

==> FCC NEWS: FCC REAFFIRMS STATEMENT ON ROS

In mid-February, European amateurs first used a new, experimental digital mode known as ROS. On February 23, 2010 -- after FCC review of the original documents provided from the developer's Web site -- the FCC made a statement on ROS. The ARRL supports -- as one of the basic purposes of Amateur Radio -- the experimentation and advancing the technical skills of operators. The development and use of any new mode is exciting to many amateurs, and the League encourage amateurs to experiment within the parameters of the rules; however, the ARRL also reminds US licensees that according to Section 97.307, spread spectrum communications are only permissible in the US on frequencies above 222 MHz. Read more, including what the FCC had to say about ROS, here <http://www.arrl.org/news/stories/2010/03/04/11377/?nc=1>.

==> PUBLIC SERVICE : AMATEUR RADIO OPERATORS WRAP UP COMMUNICATIONS SUPPORT IN HAITI

After the 7.0 magnitude earthquake struck the island nation of Haiti on January 12, many Amateur Radio operators asked how they could volunteer their time and service to assist with communications support. When Project Medishare <http://projectmedishare.org/> -- a partnership between the University of Miami Medical School (UM) and physicians and health officials in Haiti -- needed help with their communications, Amateur Radio operators were quick to respond. According to Jack Satterfield, W4GRJ/AFA4DG, Medishare has constructed several health clinics in Haiti over the years -- all of which were destroyed in the earthquake. "Medishare was able to rapidly deploy medical teams and assets to begin the overwhelming task facing the post earthquake medical needs," he told the ARRL.

"UM Vice President for Facilities and Operations Ron Bogue was the Director in Charge of the Haiti operations. His concern about the unreliable communications caused him to contact Julio Ripoll, WD4R, with whom he has worked for years as the architect for UM Medical facilities. Ron knew that Julio is a ham radio operator and very involved with the National Hurricane Center in Miami and its Amateur Radio station, WX4NHC. Ripoll then contacted ARRL to request help in soliciting volunteers. ARRL immediately sent down an HF Go Kit --

through the ARRL's Ham Aid Program -- and put Ripoll in touch with ARRL West Central Florida Section Emergency Coordinator and Navy MARS Florida State Deputy Director Neil Lauritsen, W4NHL/NNN0TFH. Read more here <http://www.arrl.org/news/stories/2010/03/03/11371/?nc=1>.

==> ARRL IN ACTION : WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including holding elections for and appointing people to League leadership positions, preparing for WRC-12, legislative actions, providing equipment for communications support in Haiti through the ARRL's Ham Aid program, developing on-the-air events, investigating power line noise and more. This installment covers the month of February. Read more here <http://www.arrl.org/news/features/2010/03/01/11366/?nc=1>.

==> ARRL EXECUTIVE COMMITTEE MEETING AGENDA NOW AVAILABLE

At its January 2010 meeting, the ARRL Board of Directors decided to make the agendas of Board and Executive Committee meetings available on the ARRL Web site. The first opportunity to do so is for the Executive Committee meeting to be held March 13. The agenda is available here <http://www.arrl.org/news/files/20100313_EC_agenda.pdf>.

==> AMATEUR RADIO IN SPACE: A CLOSE ENCOUNTER FOR AMSAT-OSCAR 51

While many in North America were fast asleep Monday morning, March 1, the AMSAT-OSCAR 51 (AO-51) satellite had a potentially dangerous encounter with another spacecraft known as Formosat 3D. OSCAR 51 is a popular Amateur Radio satellite that often functions as a crossband FM repeater, relaying brief conversations over hundreds of miles. Formosat 3D is part of a constellation of six remote sensing microsatellites that collect atmospheric data for weather prediction and for ionosphere, climate and gravity research. Both orbit at an altitude of approximately 500 miles. Read more here <http://www.arrl.org/news/stories/2010/03/03/11373/?nc=1>.

==> W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

Beginning Monday, March 15, W1AW <http://www.arrl.org/w1aw.html>, the Hiram Percy Maxim Memorial Station, will alternate the digital modes used for its digital bulletin transmissions. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, W1AW Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16. "Because of time constraints and the varying lengths of digital bulletins, there were many instances where only Baudot was used," he said. "With the new schedule, amateurs preferring either PSK31 or MFSK16 will no longer find these modes secondary." Read more here <http://www.arrl.org/news/stories/2010/02/16/11343/?nc=1>.

==> SOLAR UPDATE

Tad "The Sun shines hot and the wind blows cold
<http://en.wikipedia.org/wiki/Great_Expectations>" Cook, K7RA, reports:
The sunspots just keep coming: Two new sunspot groups appeared on March
1, numbered 1052 and 1053. This brings the total number of sunspot
groups appearing over the last month at 11. Looking at our 3-month
moving average of daily sunspot numbers, the latest for
December-January-February is 22.4, for the period centered on January.
The 3-month moving averages for the periods centered on July through
January were 4, 4, 4.64, 7.1, 10.16, 15.15 and 22.4. The average
sunspot number for the month of February was 31, up from 21.3 for
January and 15.7 for December. The February average being 8.6 points
higher than the trailing three month average (22.4) is a good trend.
Look for more information on the ARRL Web site on Friday, March 5,
including more news from happy radio amateurs commenting on improved
conditions on the higher part of the HF spectrum. The vernal equinox
occurs in a little over two weeks, ushering in good spring conditions.
For more information concerning radio propagation, visit the ARRL
Technical Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. This week's "Tad
Cookism" brought to you by Charles Dickens' Great Expectations
<http://en.wikipedia.org/wiki/Great_Expectations>.

==> SILENT KEY : TAPR PRESIDENT EMERITUS DR DAVID TOTH, VE3GYQ (SK)

Dr David Toth, VE3GYQ -- President Emeritus of Tucson Amateur Packet
Radio (TAPR) -- passed away Friday, February 26 after a long battle
with cancer. He was 55. A resident of Spencerville, Ohio, Toth served
as a Director and Executive Vice President of TAPR in the 1980s and was
elected President of the organization in September 2005. With his
advancing illness, he decided not to stand for re-election last October
and was instead named President Emeritus with Steve Bible, N7HPR,
taking the reins as TAPR President. Read more here
<http://www.arrl.org/news/stories/2010/03/01/11367/?nc=1>.

==> W1AW NEWS: MARCH W1AW/WEST COAST QUALIFYING RUN SCHEDULE

The March schedules for the W1AW and West Coast Qualifying Runs were
inadvertently left out of the March issue of QST. The March schedules
for W1AW are as follows: Friday, March 5 at 10 PM EST (Saturday, March
6 at 0300 UTC) for 10-25 WPM and Tuesday, March 16 at 7 PM EDT (2300
UTC) for 10-40 WPM. The West Coast Qualifying run will be transmitted
by station K6KPH on Saturday, March 13 at 2 PM PDT (2200 UTC) for 10-35
WPM. The run will be transmitted simultaneously on 3581.5, 7047.5,
14047.5, 18097.5 and 21067.5 kHz.

==> THIS WEEK ON THE RADIO

This week, look for the ARRL International DX Contest (SSB)
<http://www.arrl.org/contests/rules/2010/intldx.html> on March 6-7. The
Wake-Up! QRP Sprint is March 6 and the DARC 10 Meter Digital Contest is
March 7. The CLARA HF Contest is March 9-10 (continuing on March 13-14)
and the CWops Mini-CWT Test is March 10-11. Next week, the Feld Hell
Sprint is March 13. The RSGB Commonwealth Contest, the Elecraft QSO

Party and the Idaho QSO Party are March 13-14. The North American Sprint (RTTY) and the SKCC Weekend Sprint are March 14. The Wisconsin QSO Party is March 14-15 and the NAQCC Straight Key/Bug Sprint is March 18. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.
Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL RECOGNIZES: PAUL CHRISTENSEN, W9AC, WINS FEBRUARY QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for February is Paul Christensen, W9AC, for his article "An SWR Null Meter." Congratulations Paul! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the March issue by Wednesday, March 31.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

244. ARNEWSLINE SPECIAL BULLETIN: HAMVENTION 2010 AWARD NOMINATIONS DUE BY MARCH 15

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-05 05:39:52 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>
Message-ID: <5.2.0.9.2.20100304213554.03753948@popd.ix.netcom.com>
Source record: 1466
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.info

There are only a few days left to nominate individuals and clubs for the Hamvention 2010 awards. While the Special Achievement Award, Technical Excellence Award, and Amateur of the Year Award have been given for many years, Awards Chairman Frank Beafore, WS8B, said this a year a special award with be given for Club of the Year. That award is tied to this year's Hamvention theme, Amateur Radio Clubs Worldwide: The Lifeline.

March 15 is the deadline for nominations for all four awards and winners will be notified in April and publicly honored at Hamvention 2010 in May. Information on how to nominate for these awards is available at www.hamvention.org <http://www.hamvention.org>. This is an opportunity recognize that individual or club for efforts in behalf of amateur radio.

245. Amateur Radio Newsline(tm) Report 1699 - March 5, 2010

Amateur Radio Newsline(tm) Report 1699 - March 5, 2010

Now, Amateur Radio Newsline report number 1699 with a release date of Friday, March 5th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds to an earthquake in Chile and a tsunami it causes across the Pacific Ocean. Find out the details on Amateur Radio Newsline(tm) report number 1699 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CHILEAN HAMS ACTIVATE FOLLOWING FEBRUARY 27 QUAKE

Radio Club de Chile President Dr Galdino Besomi, CE3PG says that hams in Chile took to the air shortly after a magnitude 8.8 earthquake that rattled his nation in the early morning hours of February 27th. Norm Seeley, KI7UP, has the latest:

--

In a March 1st telephone conversation with IARU Region 2 President Reinaldo Leandro, YV5AMH, Dr. Bensomi said that soon after the earthquake hit, an Emergency Net was activated across the entire country. Initial activation was on VHF followed by nets on the HF bands.

CE3PG says that all Radio Club de Chile members are actively working in close coordination with civil and military authorities. Also that requests health and welfare news about people in the affected areas is one of the main activities occupying the Chilean radio amateurs these days.

As we reported in last weeks breaking news bulletin, the massive 8.8 magnitude shaker caused widespread devastation across Chile. It also triggered a tsunami alert from the West coast of North and South America to as far away as New Zealand, Australia and the nations of the Pacific Rim..

Ham radio will likely be involved in post quake disaster communications for some time. The IARU Region 2 and the Chilean national ham radio society have requested that monitor a number of emergency communications frequencies for traffic pertaining to the earthquake and its aftermath. These are 3.738, 3.750, 7.050, 7.100, 14.200, 14.350, 21.200, 21.350, 28.300 and 28.500 MHz.

In addition to these frequencies, hams may also want to listen to the worldwide emergency communication Center of Activity frequencies. These are 14.300, 18.160 and 21.360 MHz. Other suggested monitoring frequencies are 3.720, 7.045 and 7.060 MHz.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

As we go to air, the Chilean government confirmed 799 people had been killed by the quake, and at least 2 million made homeless. But that number could rise because others including tourists camping on the coast may have been dragged out to sea by the 40ft-high tsunami that followed. (Various Sources)

**

RESCUE RADIO: HAWAII HAMS WERE PREPARED TO FACE TSUNAMI

The shaker that caused massive devastation across Chile also triggered a tsunami alert from the West coast of North and South America to as far away as New Zealand, Australia and the nations of the Pacific Rim. One of the first places to go on tsunami watch was Hawaii. Bill Pasternak, WA6ITF, has been following that part of the story from our newsroom in Los Angeles:

--

"Did I hear any more stations trying to check in, KH6IB with the emergency response communications net for the impending tsunami headed into Honolulu as well as the Hawaiian Islands and actually California."

--

That's the voice of Ralph Young, KH6IB, who was part of a Hawaii state wide tsunami alert on Saturday, February 27th. This as some 60 Hawaiian hams participated in a tsunami radio net that operated throughout the island state. Over two dozen real-time reports from observers around the state were relayed simultaneously to the State Emergency Operating Center and the four county EOC's. Reports like this one provided up to the minute information on sea level changes to emergency management officials.

--

"Just an update from the Big Island of Hawaii. Its been reported the water is receding in Hilo too on the breakwaters as well as on a couple of the beaches. I'm on the Southern end and that's the report from Hilo, Hawaii. Back to net, KH6RFB."

--

Ron Hashiro, AH6RH, is the Hawaii State Civil Defense ARES and RACES Coordinator. He says that emergency managers in his state have long been preparing for a tsunami from Chile. Planning began in 1960 shortly

after an earthquake in Chile created a tsunami that all but destroyed the city of Hilo on the Big Island.

According to AH6RH, the 14 hour travel time for the tsunami to reach Hawaii provided ample time for radio amateurs to put in place their response plan.

Hashiro said that activity started on Friday, February 26 when key Amateur Radio operators were alerted to the 8.8 magnitude earthquake in Chile. Then he and Kevin Bogan, AH6QO began receiving messages from the Pacific Tsunami Warning Center that lead to the activation of RACES and ARES. Coordination was handled on radio via the AH6CP UHF repeater. Also utilized were text messages, phone calls as well as postings to Facebook and tweets on the Twitter social networking websites. But it was mobile operations over the state wide repeater network that Hashiro said would prove to be of the greatest value as the tsunami approached:

--

"We were very fortunate with the tsunami net during this event because both islands have exempted amateur radio from their mobile cellular telephone bills. As a result hams can still operate with their radios in their vehicles and it was that element that provided real time reporting to the state EOC"

--

Radio operations began with the sounding of the warning sirens across the state at 6 AM. The 6:01 AM net was a bulletin-only with instructions for starting operations at 7 AM. Meantime, amateur radio operators reported to the State and County EOCs. Hashiro, Robin Liu, AH6CP, and Mitch Pinkerton, KH6MP, were stationed at the State Civil Defense EOC in Diamond Head crater From there they operated nets on the State RACES VHF Repeater network and 7.088 MHz on 40 meters.

The state-wide tsunami net commenced operation at 10:45 AM with check-ins and position reports. Everything was ready for the tidal surge. When it began, so did the reports from the hams in the field:

--

"The water is still receding on the Big Island of Hawaii in Hilo. Its going back out again and going out more this time than it did the first time and we've heard that the Marquises Islands have been hit with a 6 foot wave."

--

As the event continued, hams traced the ocean changes around the Big Island, then to the harbors and rivers on Maui, Oahu and Kauai. Receding water levels on the order of 2 to 6 feet were reported as the various waves moved through the island chain. And as the hours passed the hams also passed along other information including one dealing with the water supply on one of the islands:

--

"They have turned off all the water to Hilo as well as Kona, I think as a precautionary measure so that they don't get contamination. So they have shut down all the water to both of those cities. Back to net, Ill be monitoring. KH6RC."

--

According to AH6RH check-in nets were run at the top of each hour to monitor the availability of operators and their locations. Thankfully the tidal surge was minimal. As a result, real-time reporting ended at 1:08 PM and the tsunami warning for Hawaii was canceled at 1:38 PM.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles

--

Ron Hashiro AH6RH, says that Hawaii State Civil Defense Vice Director Ed Teixeira was extremely pleased and grateful for these reports and extended his thanks to the Hawaiian amateur radio community for another outstanding job well done. (ARNewsline(tm), AH6RH)

**

BREAK 1

Coming to you this week from Los Angeles, California and Auckland, New Zealand we are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB0QXW repeater serving Saint Louis, Missouri.

(5 sec pause here)

**

RESCUE RADIO: SOCAL HAMS READY BUT NOT CALLED OUT FOR TSUNAMI

While public officials in Hawaii were in full alert for the Chilean earthquake generated tsunami, the same cannot be said for the political leadership in Southern California. This according to Gordon West, WB6NOA, who says that after all the hours of training volunteers in the various cities that comprise the Southern California region, not one politician nor their staff members had the courtesy to let them know what was going on:

--

West: "We had ham radio operators in Dana Point, Newport Beach, Huntington Harbor, Catalina Island, Long Beach Harbor, L.A. Harbor. Hams were all over the place but no one to make a report to. The hams were not mobilized in Southern California, and that seems strange because here in Southern California we've offered a lot of free classes to municipalities wanting to get their CERT groups going in disaster preparedness."

--

West speculates that the uncertainty over the use of volunteers caused by the FCC's strict interpretation of rule 97.113 might be one of the reasons that the political leaders shied away from calling out or using the services of ham radio volunteers:

--

West: "Well, maybe it was 97.113 and the worry by cities that this would be an exercise that the FCC might not approve. This was not an exercise. This was an actual tsunami with the waves coming into the Los Angeles area."

--

Even though there was no official callout some Southern California's rescue radio hams took the initiative to use the event as a training exercise. Some nets did put themselves into operation and properly equipped operators like Jason Gant,W6AUX, on Catalina Island were able to provide accurate tidal surge reports. Reports that sadly went nowhere:

--

"This is W6AUX reporting from Avalon. We had an approximate one foot surge come in at 12:18 P.M. Pacific Standard Time. The tidal situation is that we are two hours from an extreme low tide of minus 1.2 feet so this helped us in managing this very low surge. This is W6AUX, out."

--

According to West, its beginning to appear as if the political leadership of the region really has no idea of the free expert communications talent at their fingertips:

--

West: "They don't realize the resources that the ham operators could bring, such as we had one ham, Richard, K6RBS, that was monitoring the DART Buoys and was giving an up to date count as to how high or not high the tsunami would reach here in Southern California."

--

As we go to air its unclear if any other California, Oregon, Washington, Alaskan or Canadian coastal communities put their ham radio response groups on alert. What we do know is that in Southern California that was not the case.

And less we forget, to hear more of what Gordon West has to say regarding this issue just tune into this weeks RAIN Report, Its on line all this week at www.therainreport.com. (ARNewsline(tm))

**

RADIO LAW: FCC REFUSES TO ISSUE DECLARATORY RULING TO PROTECT HAMS FROM NEW JERSEY AND FLORIDA ANTI PIRATE RADIO LAWS

The FCC has turned down a request filed in 2005 by the American Radio Relay League for a declaratory ruling. One that would have indemnified ham radio operators from prosecution under anti pirate radio laws in two states.

In a letter dated February 25th, the FCC responded to a Request for Declaratory Ruling Request filed by attorney Christopher D. Imlay, W3KD, on February 25, 2005 on behalf of ARRL. In it the ARRL asked the FCC for a declaratory ruling that Section 877.27 of the Florida Criminal Statutes and Section C.2C:33-23.1 of the New Jersey Statutes be preempted by federal law. Both of these statutes make it a felony to make a radio transmission without Commission authorization or to interfere with a licensed public or commercial radio station.

In its filing, the ARRL acknowledged that the statutes were enacted to address unlicensed pirate broadcasting facilities. But the League was concerned that these laws could be applied to Commission-licensed amateur radio stations.

In declining the ARRL request the FCC noted that the Florida legislation has now been in effect for over five years and the New Jersey law has been in effect for over four years. It says that in that time the agency has not received any reports of any amateur operators being prosecuted or threatened with prosecution under either statute.

The FCC decision did leave the door open in case a ham somewhere winds up under the gun of one of these two state laws. It said that the ARRL may file a new petition for declaratory ruling in the event of changed circumstances. Read that to mean its going to take a test case in New Jersey or Florida before the FCC gives any consideration to preempting either state law. (FCC)

**

RADIO SAFETY: FLORIDA MAN ELECTROCUTED INSTALLING ANTENNA TO TALK TO HAITI

A Lauderdale Lakes, Florida, man who was electrocuted on February 28th. This, while trying to install an antenna that authorities said would have been used to communicate with Haiti.

Police spokesman Sgt. Frank Sousa said Mackenson Mareus died when he touched a live power line at a home in the 1100 block of Northwest 18th Court. Police said the antenna Mareus was helping install was intended to set up communication with Haiti.

According to experts in South Florida that is something ham radio operators would be able to do with relative ease. But Mareus was not a radio amateur and according to his cousin Louikenson Arne he did not know what the antenna was for.

Arne said that the 27 year old Mareus, was from Haiti and had lived in South Florida for less than three years. He ran an Internet-based radio station called Radio Tendresse, and the Web site boasted the frequency of 97.7 FM but was not on the air anywhere in the United States.

According to the police report on the accident ham radio operators are supposed to be licensed with the Federal Communications Commission. However it was unclear who, if anyone, held a license to use the antenna and any radio gear connected to it at the time of the accident that took Mackenson Mareus life. (Published news reports)

**

RADIO BUSINESS: GRE TO ASSUME ALINCO SALES AND SERVICE

GRE, Inc, best known as an original electronics manufacturer and Alinco, Inc. have announced an new marketing agreement. One under which G-R-E America, Inc. will distribute, offer customer support, and provide warranty and non-warranty repair for radios and amplification equipment under the Alinco brand for all of North America.

Under the agreement, GRE, Inc. will be the exclusive distributor of Alinco products in Canada, USA, and Mexico and will handle all warranty service and parts orders. GRE will also provide out-of warranty service as will other currently authorized Alinco service centers. (GRE)

**

NEW PRODUCTS: MORSE CODE TIE FOR PILOTS

A new way to learn the Morse code if you fly. Wear it. And no we are not kidding as we hear from Frank Lusa, VK2FJL of the WIA National News has the story from down-under:

--

Aviators have Morse code all tied up. How, Well you might ask? Well it's a neck tie that has the code printed on it.

Presumably pilots can check their tie if they're a bit rusty on the code and want to verify what beacon they're receiving. These beacons transmit a two to five letter callsigns at 5-words per minute. Lets hope that coffee stains do not obliterate too many dits and dahs.

Im VK2FJL reporting for the WIA National News.

--

Now all someone has to make these new aviators Morse code ties, self cleaning. (WIA News)

**

THE SOCIAL SCENE: THE DUTCH NATIONAL RADIO FLEAMARKET MARCH 13

Turning to the international social scene, the Dutch National Radio Fleamarket takes place on March 13th at the Autotron at

's-Hertogenbosch, just off A59 motorway in Holland. The event opens at 9.00 A.M. local time and runs until 15.30. Details can be found on the website at www.radiovlooienmarkt.nl. (GB2RS)

**

BREAK 2

This is ham radio news for today's radio amateur. We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed around the globe by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: DR. DAVID TOTH, VE3GYQ - SK

Some sad news to report. This with word of the February 26th passing of former Tucson Amateur Packet Radio President David Toth, VE3GYQ at his home in London, Ontario, Canada. Toth who was only age 55 served as Tucson Amateur Packet Radio President from 2005 to 2009 and was twice as a member of its Board of Directors. At the time of his passing he held the title of President Emeritus of the organization.

In addition to amateur radio, Dr. Toth's other passions were flying his Piper Twin Comanche and astronomy. He established the London, Ontario, Astronomy Club and served as its president. He was also a member of the Royal Astronomical Society of Canada and belonged to the Lima, Dayton and Columbus Astronomy Clubs.

During his career VE3GYQ traveled to Chile and Australia for NASA to fix telescope problems. He also worked closely with Software Bisque to develop computer programs to operate telescopes.

Dr. Toth graduated from the University of Western Ontario Medical School in 1978. He practiced family medicine in London, Ontario but moved to the U.S. in 1993 to began a career in emergency medicine. He was a partner of Premier Health Care Services, in Dayton, Ohio, and worked at Lima Memorial Health System and St. Rita's Medical Center until the time of his illness. (WB9QZB)

**

CHANGING TECHNOLOGY: SONY TO CLOSE ALABAMA MAGNETIC TAPE PLANT

Call it a true sign of the times. This with word that Sony Corporation plans to close its tape-manufacturing plant in Dothan, Alabama. This as the need for magnetic tape products dwindles to a trickle world-wide.

As recently as five years ago most recording of video and audio was done to tape. But as magnetic disc drives, flash memory and electro-optical recording technology made rapid advances, the need for magnetic tape products quickly declined.

Now it has finally reached a low where the demand for magnetic tape products like those produced at the Sony Dolthan, Alabama, plant has reached the point where keeping it open is no longer economical. According to Sony, operations at the plant will be phased out starting in April with the closure planned to be completed by September.

The facility was opened in 1977. Termination of its operation will lead to the loss of 300 jobs. (Birmingham News, RW, others)

**

HAMS IN THE NEWS: MATTHEW ARTHUR KA0PQW NAMED TO RECEIVE PRESIDENTIAL AWARD

Some names in the news. Handiham World reports that Matthew Arthur, KA0PQW, of Ellendale, Minnesota, has been selected to receive a President's Volunteer Service Award. Arthur is being recognized for his work with the Community Emergency Response Team in Steele County, Minnesota. That's where he volunteered and handled communications during a flood in 2007.

According to Handiham World, this was a nine hour non-stop stint that lasted until the National Guard could relieve him. During that time he handled traffic into and out of the flood zone, passing messages to authorities in the city of Winona.

Handiham World says that a story on Matthew Arthur's selection to receive the award appeared in the February 18, 2010 edition of the Star-Eagle newspaper that also featured a photo of his well equipped amateur station. KA0PQW is also a Handiham leader and volunteer. (WA0TDA, Handiham World)

**

NAMES IN THE NEWS: DIANA ENG KC2UHB JOINS ARRL PUBLIC RELATIONS COMMITTEE

Diana Eng KC2UHB, well known for her amateur radio articles and videos for MAKE magazine, will be joining the ARRL Public Relations Committee. Eng who is a fashion designer who is known to integrate electronics into the attire she designs says that she is very excited to join the committee because she wants to help connect the maker and hacker community to the ham radio community.

Phil Torrone is the senior Editor of MAKE magazine. He describes Diana Eng as a fashion nerd, hacker, maker and ham radio ambassador. He says that KC2UHB is one of those people who inspire us all to hack, mod, and learn new skills.

Eng herself notes that it is an exciting time because there is a huge growth in the maker and hacker community. She says that it is hip to tinker and that ham radio operators were the original makers and hackers.

Diana Eng maintains her own website. It's a fun place in cyberspace to visit at http://fashionnerd.com/ (Southgate)

**

EMERGING TECHNOLOGY: CHILE QUAKE MAY HAVE SHORTENED THE DAYS

Scientists at NASA say that the 8.8 magnitude earthquake that struck Chile on Saturday, February 27th may have shifted Earth's axis and created shorter days. If their preliminary calculations are correct each day should be 1.26 microseconds shorter/

According to Science OnLine, large earthquakes cause massive amounts of rock to shift and alters the distribution of mass on the planet. That distribution change causes the rate at which the planet rotates to alter and it is the rate of rotation rate determines the length of a day.

Richard Gross is a geophysicist at NASA's Jet Propulsion Laboratory in Pasadena, California. He used computer modeling to determine how the magnitude 8.8 quake that struck Chile may have affected Earth. He found that the quake should have moved Earth's figure axis about 8 centimeters. That shift in axis is what may have lead to the minutely shortened days. (Science Daily)

**

RADIO COOPERATION: ROS FREQUENCIES MOVED ON 20 METERS

ROS is changing channel. Josï¿½ Alberto Nieto Ros, the originator of the new amateur radio data mode ROS, has agreed to move the suggested 20 meter frequencies for this mode to 14.0972MHz and 14.102MHz. This following a mounting number of complaints that the mode was accidentally causing massive world-wide interference to the international beacon frequency of 14.100 MHz.

The original frequencies recommended for the mode had been 14.098MHz and 14.1011MHz. This sandwiched the decades old propagation advisory system between the original frequencies for ROS and making it impossible to hear the beacon propagation broadcasts.

You can find out more about ROS at http://rosmodem.wordpress.com. More about the International Beacon Project at www.ncdxf.org/beacons.html. (Southgate)

**

DX

In DX, we start with word from ARRL Awards Branch Manager Bill Moore, NC1L, that the 3V3S operation from Tunisia and the D2CQ operation in Angola have been approved for DXCC credit. The 3V3S operation took place in 2009 while D2CQ is ongoing.

On the air now is G3LZQ active as 3B9WR from Rodrigues Island through April 2nd. His operation is on all bands 160 to 10 meters, mainly CW, but with a focus on the 160 through 40. Also look for him to be in the RSGB's 73rd Commonwealth Contest (March 13-14th). QSL via his home callsign.

And lastly, DF7ZS, will be on the air from Madeira Island signing portable CT9. This. between March 24th and the 31st. Activity will be holiday style and will focus on the WARC bands. QSL via DF7ZS. To which we can only add the line: "Have some Madiera my dear." OK. Bad joke unless you know the music of the Limeliters.

(Above from various DX news sources)

**

THAT FINAL ITEM: NEIGHBOR SUES NEIGHBOR OVER ELECTROMAGNETIC ALLERGY

And finally this week the story of a Santa Fe, New Mexico, man who is suing his neighbor because he claims that her cellular telephone, her WiFi and even her lamp dimmers are making him ill. Once again, here is Amateur Radio Newsline's Bruce Tennant, K6PZW, who takes a look at this rather strange case:

--

The Santa Fe Reporter and Huffington Post newspapers says that a New Mexico resident who alleges he suffers from electromagnetic allergies is has filed a tort action against neighbor because she refuses to turn off her home electronic equipment. According to the news stories, Arthur Firstenberg of Santa Fe, has been sleeping at friends' homes or in his car to avoid what he claims are the electromagnetic waves created by his neighbor's cell phone, wireless network, computer, compact fluorescent light bulbs and lamp dimmer switches.

Firstenberg claims that the low-level electromagnetic radiation emitted by cell phones and other modern gadgets makes him, and others sensitive to radio waves suffer terribly. He believes that the side-effects of exposure, include nausea, vertigo, ringing in the ears, severe headaches and body aches. He also credits crippling joint pains, insomnia, impaired vision, impaired muscular control and other ailments to electromagnetic sources.

The suit claims that when Raphaela Monribot moved in next door, she refused to keep her phone, computer and wireless network turned off when not in use. When asked if she could use a landline instead of her iPhone, Firstenberg claims the neighbor flatly refused.

Firstenberg suit demands that a judge to stop his neighbor from using her iPhone, her wireless internet and her laptop charger, saying the radiation has forced him from his home. He also wants $530,000 in damages, including $100,000 for pain and suffering.

The lawsuit was filed January 4th in First Judicial District Court in Santa Fe. Firstenberg's attorney is Lindsay Lovejoy, Jr, who is a graduate of Harvard and Yale, as well as a former Assistant New Mexico Assistant Attorney General who has argued cases alongside now US Senator Tom Udall. With such a high power attorney, its doubtful that this case will disappear anytime soon.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, In Los Angeles.

--

The battle against WiFi in Santa Fe isn't one Firstenberg is fighting alone. He's part of a group of city residents who are pursuing legal means to remove all WiFi hotspots from public locations because they claim the wireless internet waves aggravate their electromagnetic allergies. NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk in Los Angeles, I'm Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand, saying 73 and we thank you for listening.

If I might be a little contrary here (only a little)

I would have to say that I really prefer what we are having now, a slow growth, as compared to some sort of tracking of general population growth with ours.

We have some pretty finite operation bandwidth, and if we had a huge number of people trying to operate, it would be pretty bad.

At least for my setup, I turn on the radio and there are a lot of Hams operating. The only empty places are the higher frequencies which are only slowly coming back, and even 80/75 has local traffic during the day. 40 and 20 are pretty wall to wall, and 30 and 15 are busy enough to keep an Op happy.

If we had a lot more Hams getting on the air, it would be worse than contest weekends. We've done fairly good in getting more frequencies to operate on, 60 meters was a mixed success, and 40 opening up a bit is nice. I don't know that there will be much more room to spread out though.

Manfred, DL5CC, sent me the following email:

****

Hello OM,

We are a clubstation near Rostock North Germany and very interested to work the award WAS.

It is very difficult to work Nebraska. Nothing in ARRL-DX-Contest 2009 and 2010.

Can you help us with Mail address from active OM in CW 20m with a good rig?

Best 73 - Manfred DL5CC 1st OP on clubstation DL0VV

****

I thought the best way to handle this was to let as many NE CW operators as possible know about it. Please email Manfred at dl5cc@gmx.de and "cc" me to let me know that you are working to set up the schedule.

Nice to be in a state where DX requests us for contacts!

Thanks and 73,
Art, K&#65533;AIZ

248. FCC Seeks Comments for Blanket Waiver to Allow Amateur Radio in Hospital Emergency Drills

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-10 15:34:29 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100310143403.14CA22044F@bmail.arrl.org>
Source record: 1470

You may have received this from another source. I thought it important enough to use our section email list to get the word out:

SB QST ARL ARLB008
ARLB008 FCC Seeks Comments for Blanket Waiver to Allow Amateur Radio in Hospital Emergency Drills

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored." Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer."

Given the public interest in facilitating government-sponsored emergency preparedness and disaster drills, the Wireless Telecommunications Bureau and Public Safety and Homeland Security Bureau have provided a process for requesting a waiver of Section 97.113(a)(3) to permit named Amateur Radio operators to participate in specified government-sponsored drills by transmitting messages on behalf of identified employers. The waiver must be requested prior to the drill, and employees may not transmit amateur communications on their employer's behalf unless the waiver request has been granted by the FCC.

According to AHA, waiver relief should be available for these non-government-sponsored exercises "because it is in the public interest to ensure that hospital communications operate effectively during emergencies." The FCC noted that in its blanket waiver request, the AHA also stated that requiring separate waiver requests would be administratively burdensome on hospitals and the Commission. "AHA thus requests a blanket waiver for hospitals seeking Joint Commission accreditation, until such time as the Commission adopts a final order in response to a forthcoming Notice of Proposed

Rulemaking that will seek comment on potential changes to Section 97.113(a)(3)," the FCC said.

"AHA states that hospitals seeking accreditation from the Joint Commission (formerly the Joint Commission on Accreditation of Healthcare Organizations) must prepare an emergency operations plan setting forth how the hospital will communicate during emergencies, and establish back-up communications links (which, among other means of communications, may include amateur radio stations) to communicate essential information if primary communications systems fail," the FCC pointed out in its Public Notice. "AHA states that hospitals seeking accreditation also are required to test their emergency operations plans twice annually."

As such, the FCC has opened up the matter for public comment. Not only are comments in favor of or against the issue of amateur operators -- who are hospital employees -- to participate in emergency drills conducted by hospitals for accreditation purposes that are not government-sponsored welcomed, the Commission is also seeking comments addressing "whether, if blanket relief were to be granted, there would be some benefit from requiring hospitals to provide notice to the Commission concerning emergency drills they perform, and what such notice should entail."

Comments are due by Friday, April 2; reply comments are due no later than Monday, April 19. All filings should reference the docket number of this proceeding, WP Docket No 10-54. In the Public Notice, the FCC noted that this proceeding has been designated as a "permit-but-disclose" proceeding in accordance with the Commission's ex parte rules: "Parties making oral ex parte presentations in this proceeding are reminded that memoranda summarizing the presentation must contain the presentation's substance and not merely list the subjects discussed. More than a one- or two-sentence description of the views and arguments presented is generally required."

Instructions on how to paper file or file electronically are listed in the Public Notice.

249. Nebraska LB719 "Indefinitely Postponed" (was Re: LB719 Hearing)

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-10 15:35:05 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100310142802.CE1BA203C6@bmail.arrl.org>
Source record: 1471
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.policy,rec.radio.info

I am sorry to report that LB719, the bill to allow storm spotters to use flashing amber lights on their vehicles was "indefinitely postponed" in an executive session of the Transportation Committee.

Here is an email that was forwarded to me by Jim Winney, KD6MXE:

James:

I just spoke with the Transportation Committee counsel about the status of LB719. Unfortunately, the bill was indefinitely postponed during an executive session of the Committee last night. Among the Committee's concerns were how voluntary declarations of "weatherspotter" could be determined and enforced under the language of the bill. I thought that the Nebraska Association of County Officials did a nice job of addressing that issue during the hearing, however, the Committee remained apprehensive about it.

I will talk to Senator Avery about bringing this back in the next session, as I think we can overcome the Committee's concerns with tighter language. Thanks for your interest in this legislation.

Thanks,
Nicole

Nicole Kanne
Legislative Assistant
Senator Bill Avery
District 28
(402) 471.2633

****

I will be working with the people involved to get this bill reintroduced at the next session. In the meantime, we will try to work up an acceptable definition of "weather spotter" and a way to identify them to law enforcement officials.

I'm sorry that the bill didn't make it this time. But we all owe a lot of thanks to the hams and emergency management officials who initiated this process in this session.

That's entirely understandable.

There are two basic kinds of people that put flashing lights
etc. on their vehicles.

1. People that understand the need for visibility to avoid an
an accident.

2. Those that use any excuse possible to maintain a vehicle
that can be confused with a public safety vehicle.

It's the people in number 2 that give us a bad name.

I know this is only tangentially connected to amateur radio.
But a majority of us still do a bit of bench work now and
then.

I thought this was a perfect use of a soldering iron.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S 1755

<http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> Senate
Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act
of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT)
and Susan Collins (R-ME) -- has unanimously passed the US Senate and
has been sent to the US House of Representatives for consideration and
now sits in the House Committee on Energy and Commerce. The ARRL is
asking its membership to contact the leadership of the Energy and
Commerce committee, requesting support and action on moving S 1755
through the committee. S 1755 accomplishes the same things as HR 2160;
HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee
(D-TX-18). Since S 1755 has already been approved by the Senate, moving
it forward in the House will simplify the process. Click here
<http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more
information, including instructions on how to encourage the committee's
leadership to support S 1755.
```

==> FCC NEWS: FCC SEEKS COMMENTS FOR BLANKET WAIVER TO ALLOW AMATEUR RADIO IN HOSPITAL EMERGENCY DRILLS

<http://www.arrl.org/news/stories/2010/03/04/11375/?nc=1> In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored." Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Instructions on how to paper file or file electronically are listed in the Public Notice. Read more here <http://www.arrl.org/news/stories/2010/03/04/11375/?nc=1>.

==> ARRL RECOGNIZES: BOB SCHROEDER, N2HX, AWARDED 2009 BILL ORR, W6SAI, TECHNICAL WRITING AWARD

<http://www.arrl.org/news/stories/2010/03/08/11383/?nc=1> H. Robert "Bob" Schroeder, N2HX, of Ewing, New Jersey, has been named the winner of the ARRL Foundation's 2009 Bill Orr, W6SAI, Technical Writing Award for his article "Electromagnetic Pulse and Its Implications for EmComm" that appeared in November 2009 issue of QST. The editorial staff commented on Schroeder's article, saying that "the topic of nuclear EMP is somewhat esoteric by itself, let alone discussing its impact on Amateur Radio, yet the author did an outstanding job of making the subject matter understandable even to the relatively non-technical ham. His writing is clear and to the point, offering practical advice not only for EMP mitigation as it applies to the unlikely event of a nuclear burst, but also extending the same principles to mitigation for lightning damage." Read more here <http://www.arrl.org/news/stories/2010/03/08/11383/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here

<http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> COMING UP IN QST : LOOK FOR YOUR APRIL ISSUE TO ARRIVE SOON!

<http://www.arrl.org/news/stories/2010/03/10/11387/?nc=1> The April issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting -- including the official ARRL Rookie Roundup announcement and a report on how hams responded to the crisis in Haiti -- the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest articles, as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/03/10/11387/?nc=1> to discover what's in store for you in the April issue of QST, the official journal of the ARRL.

==> FCC NEWS : ADMINISTRATIVE LAW JUDGE SAYS WASHINGTON STATE LICENSEE CAN KEEP HAM LICENSE

In January 2007, the FCC issued an Order to Show Cause <http://www.arrl.org/?artid=7170> to David L. Titus, KB7ILD, of Seattle, Washington, to justify why his General class Amateur Radio license should not be revoked and initiated a hearing process to determine whether Titus "is qualified to remain a Commission licensee" in light of a 1993 felony conviction at the age of 18 for "communicating with a minor for immoral purposes." According to the FCC order, Titus received a 25-month prison sentence for this act, and the Seattle Police Department has identified him as a registered sex offender. On March 9, Administrative Law Judge Richard L. Sippel issued his Initial Decision <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.pdf> -- saying that Titus " has been a law-abiding member of his community for many years" and ordered that Titus' license should not be revoked based on the evidence presented by the defendant and witnesses on his behalf, as well as the FCC's Enforcement Bureau failure to meet the burden of proof necessary for revocation. The FCC has said that The Communications Act of 1934, as amended <http://www.fcc.gov/Reports/1934new.pdf> provides that the Commission may revoke any license if conditions come to its attention that would warrant a denial of the licensee's original application. In the past, the Commission has said that felony convictions, "especially those involving sexual offenses involving children," raise questions regarding a licensee's character qualifications. Sippel's Initial Decision shall become effective "and this proceeding shall be terminated 50 days after its release if exceptions are not filed within 30 days thereafter, unless the Commission elects to review the case on its own motion."

==> FCC NEWS : FCC AMATEUR RADIO ENFORCEMENT CORRESPONDENCE POSTED

The FCC has posted new Amateur Radio enforcement correspondence on its "Amateur Radio Service Enforcement Actions

<http://www.fcc.gov/eb/AmateurActions/Welcome.html>" Web page. Laura Smith, Special Counsel in the FCC's Enforcement Bureau, sent a letters to the Sacramento (California) Municipal Utility District and to Northwestern Energy of Helena, Montana; Northwestern Energy also received letters voicing these same matters in March and September 2009. These letters concerned received complaints that equipment operated by these utilities may be causing harmful interference to Amateur Radio operators. Direct all questions about the Amateur Radio Service Enforcement Actions Web postings via e-mail <fccham@fcc.gov> only to the FCC Enforcement Bureau.

==> HINTS AND KINKS: PAINTING LETTERS

This idea comes to us from Dave Price, K4KDP <daveprice@nc.rr.com>, of Goldsboro, North Carolina.

As I get older, I find it is harder to read some of the smaller print on my radios. The ICOM 706 is a good example. The radio connectors are marked ANT 1, ANT 2, MIC and DC 13.8V, just to name a few. These are marked by either raised letters or letters that are indented into the radio housing. I found that if I paint these letters white, they show up much better on the black metal case. There is a fairly easy way to paint the letters white using cotton swabs with wooded sticks.

<http://www.arrl.org/news/files/Price_Paint.pdf> Break off the cotton tip on some of the swabs until you have about six of them with sharp points at the break area. Throw away the cotton tip and use only the wooden stick to paint with. Now spray a small puddle of white paint onto a piece of cardboard. The cardboard will absorb some of the moisture. Just as the paint starts to thicken dip the pointed end of the stick into the paint and then gently tap the paint into the indented area of the radio housing. On raised letters I use the blunt end of the stick, repeating the same process. It is best to use very little paint and repeat the process of dipping into the paint and tapping the paint onto the letters many times (see Figure 1).

You will find you have to replace the stick several times and spray a new puddle of paint when the old puddle gets too thick. You will also need to have some small paper towels and rubbing alcohol close by to quickly clean up any mistakes. I strongly recommend you practice this on some junk metal before attempting this on your expensive radios. I have also used this same trick on unpainted numbers for my Chevy truck 4 wheel drive shift mounted on the truck floor and for my watch bezel to make the unpainted numbers easier to read.

Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint in QST, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call

sign, complete mailing address, daytime telephone number and e-mail address.

==> SOLAR UPDATE

<http://sohowww.nascom.nasa.gov/data/realtime/realtime-update.html>
Tad "Here, as I point my sword, the Sun arises
<http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=julius caesar&Act=2&Scene=1&Scope=scene&LineHighlight=723>"
Cook, K7RA, reports: We experienced a bit of a scare this week when four days went by with no sunspots. That's right -- for the first time in three months, we saw more than a single day with a sunspot number of zero. The previous period was back in 2009, November 23-December 8. Until March 6, there were just three days since then with no sunspots, each a bit less than two weeks apart, December 25, January 6 and January 19. On Wednesday, sunspot 1054 emerged in the northeastern quadrant of the visible solar disc, and just south of the center of the field another sunspot is emerging. Observation via the STEREO mission reveals possibly a third spot that may appear over the eastern limb on Friday or Saturday. Currently STEREO can view a little more than 88 percent of the Sun. Sunspot numbers for March 4-10 were 40, 35, 0, 0, 0, 0 and 12, with a mean of 12.4. The 10.7 cm flux was 81.3, 79.5, 78.3, 76.6, 76.3, 77.9 and 80.3, with a mean of 78.6. Look for more information on the ARRL Web site on Friday, March 12, including more information on emerging spots, as well as some reported unseasonable sporadic-E propagation. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Shakespeare's Julius Caesar (Act II, Scene 1)
<http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=julius caesar&Act=2&Scene=1&Scope=scene&LineHighlight=723>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=ef23lvpmWro> This week, the Feld Hell Sprint is March 13. The RSGB Commonwealth Contest, the Elecraft QSO Party and the Idaho QSO Party are March 13-14. The North American Sprint (RTTY) and the SKCC Weekend Sprint are March 14. The Wisconsin QSO Party is March 14-15 and the NAQCC Straight Key/Bug Sprint is March 18. Next week, the 10-10 International Mobile Contest is March 20. The Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party are March 20-21. The Virginia QSO Party and the BARTG HF RTTY Contest are March 20-22. The Run for the Bacon QRP Contest is March 22 and the SKCC Sprint is March 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.
Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page

<http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.info

Amateur Radio Newsline(tm) Report 1700 - March 12, 2010

The following is a closed circuit advisory and not necessarily for air. With a financial update here is our Producer, Bill Pasternak, WA6ITF:

--
Its been almost two months since I last brought you an update on the financial picture for Amateur Radio Newsline. Well, while its not bleak, its not very rosy either.

But first I and our entire Board of Directors want to thank each and every one of you who has donated to keeping Amateur Radio Newsline going. Especially in this rather hard transition period since Andy's passing.

In our view you are as much a part of the team as those of us who research, write and report the news. And to each of you our heart felt gratitude for your support.

And that brings us to today where a peak at the bank account shows a balance of $482.62. The only problem is that we just paid our long distance service to bill to Verizon of $237.04. Doing the math that will leave us with only 245.58 in the bank and that simply will not be enough to cover the February bills that are due over the next two weeks.

So we once again must turn to you. We will do our part to keep the newscasts coming, but we do need your financial support to make it happen. And it looks as if we need that help rather quickly.

As you know, Amateur Radio Newsline is a 501(c)(3) not for profit corporation and your donations are tax deductible. The easiest way to donate is by Pay Pal. Just go to our website at www.arnewsline.org and click on the link to Pay Pal if you want to donate electronically. Otherwise you can send a check to us at the address you will hear at the end of this weeks newscast.

Whichever way you choose, the all volunteer staff here at Amateur Radio Newsline will be eternally grateful for your support

Now its time for this weeks Newscast. I'm Bill Pasternak, WA6ITF.

--

Thank you Bill. Now, Amateur Radio Newsline report number 1700 with a release date of Friday, March 12th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. The American Hospital Association asks for a blanket waiver covering all employee hams who want to take part in emergency training drills, New Zealand gives its hams spectrum at 500 kilohertz, an FCC Administrative Law Judge rules that the agency cannot revoke a ham radio license for a crime committed years ago and t ham in France hears and records the Mars Express fly-by of the moon Phobos. Hear the sound and find out the details on Amateur Radio Newsline(tm) report number
1700 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: AMERICAN HOSPITAL ASSN. FILES FOR BLANKET 97.113(a)(3) WAIVER

It's the waiver request to rival all other such requests to permit hams in the employ of hospitals to take part in disaster training drills. Amateur Radio Newsline's Norm Seeley, KI7UP, is here with the details:

--

The FCC has issued a Public Notice in WP Docket 10-54 that seeks comments on weather or not the Commission should grant a request American Hospital Association. This, for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored.

As most know, last year the FCC began taking a very strict interpretation of Section 97.113(a)(3) of the Amateur Service rules. This rule specifically prohibits amateur stations from transmitting communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. This has already lead to a pair of rules change requests. One filed by educator Gordon West WB6NOA and two other hams. The other from CQ Magazine. Both essentially request that 97.113(a)(3) be changed to permit hams to volunteer their services for any emergency drill conducted by an employer, whether or not the employee is on the clock. And at its January Board meeting the ARRL said it too plans to file its own proposal to modify Rule 97.113(a)(3) as well.

Late last year the FCC began granting waivers to various entities in need of using hams in their employ as a part of emergency preparedness drills. Now, the American Hospital Association says that it is time for a single across the board waiver so that individual hospitals can hold drills without having to file for specific exemptions to 97.113(a)(3).

Comments on WP Docket 10-54 are due by Friday, April 2nd with reply comments are due no later than Monday, April 19th. All filings should reference the docket number of this proceeding, WP Docket No 10-54.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

As we go to air a check of the FCC's electronic comment filing system shows those responding to be about 3 to 1 in favor of granting the American Hospital Association waiver request, but those numbers are subject to change as more comments are filed. (FCC)

**

RADIO LAW: ALJ SAYS FCC CANNOT REVOKE HAM LICENSE FOR PAST CRIME

An FCC Administrative Law Judge has sided with a ham who claimed that the revocation proceeding against his license for a crime committed years ago was unjust. In his March 9th decision, FCC Chief Administrative Law Judge Richard L. Sippel ordered that that the Amateur Radio Operator License of Amateur Radio Station KB7ILD held by David L. Titus should not be revoked and that the License Revocation Proceeding be dismissed. Bill Pasternak, WA6ITF, is in the newsroom with more on what the Administrative Law Judge decided:

--

First some background on this matter. Back in January of 2007 the FCC issued a Show Cause Order to determine whether David L. Titus, KB7ILD, was qualified to remain a Commission licensee. This, in light of a 1993 felony conviction involving a minor and whether his authorization should be revoked. The offense in question took place on April 16, 1993 and he was sentenced to serve 25 months in prison.

At that time the FCC noted that Titus' felony conviction for at least one sexual-related offense involving children raised material and substantial questions as to whether he possesses the requisite character qualifications to be and remain a Commission licensee. It also noted that while the felony conviction occurred more than 10 years earlier that the nature of his criminal misconduct and the fact the amateur radio service is particularly attractive to children called into serious question whether he should be permitted to retain his amateur radio authorization.

Titus decided to move forward with the hearing process and hired noted Washington D.C. attorney George L. Lyon, Jr. to represent him. At the hearing attorney Lyon produced numerous witnesses who testified on Titus behalf. These included a clergyman, a police officer, a corrections officer, a school counselor, a government contractor, a Red Cross worker, and a lab engineer. Each of them attested to Titus' successful integration into the community as a law-abiding citizen. Several of these witnesses are also active in Amateur Radio and approved of Titus' conduct in operating Amateur Radio. There was no rebuttal. Nor was any negative character testimony or other evidence bearing on character offered.

But Titus license was not without challenge from within the ham community. The President of the Lake Washington Amateur Radio Club appeared in person at the hearing. In his testimony he expressed concern that a convicted sex offender, who is licensed, could use his amateur radio station to contact children for immoral purposes. His concern was

heightened by the fact that Titus operates a repeater thereby affording wider coverage.

But in his finding, A-L-J Sippel stated there is no evidence of Titus mentoring a minor on ham radio procedures. Nor is there evidence of Titus communicating with a minor through his amateur radio directly or on his repeater frequency. Also, there is no credible or reliable evidence in the record to support
a finding that he would use his FCC license to solicit minors.

Lastly, A-L-J Sippel stated that David L. Titus, KB7ILD has held an Amateur Radio license for 20 years. He added that there is no credible or reliable evidence even suggesting that he ever has used or ever would dare to use ham radio communication as a means to contact minors for illicit purposes.

Administrative Law Judge Richard L. Sippel's decision carries a tag that it is issued "with prejudice." That's a legal term meaning that when a case is dismissed for good reason that the plaintiff - in this case the FCC -- is barred from bringing an action on the same claim.

For the Amateur Radio Newsline, I'm Bill; Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

The decision in this case runs thirteen pages. You can read the entire text at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.pdf or
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.txt (FCC)

RADIO LAW: FCC REAFFIRMS ROS ONLY LEGAL ABOVE 222 MHZ

The FCC says that a new digital mode developed in Europe and being used world-wide is not legal for United States hams to transmit below 222 MHz. This because it uses frequency hopping technology which the regulatory which the agency considers to be spread spectrum and bans hams from using below that frequency. Amateur Radio Newsline's Frank Haas, KB4T, has more.

--

According to the ARRL, back in mid-February, European amateurs first used a new, experimental digital mode known as R-O S. On February 23, 2010 -- after FCC review of the original documents provided from the developer's website -- the FCC made the following statements on R-O-S. We quote:

"Section 97.305 is the rule that specifies where different emission types are allowed to be transmitted on different bands. 'R-O-S' is viewed as 'spread spectrum,' and the creator of the system describes it as that. We assume that he knows what he created.

Section 97.305 authorizes spread spectrum emission types defined in Section 97.3 to be transmitted by FCC licensed amateur stations at places we regulate communications only on 222-225 MHz and higher frequency amateur bands. European telecommunication regulatory authorities may authorize amateur stations in Europe to use spread spectrum on the High Frequency bands, but this is of no concern to us.

"The Commission does not determine if a particular mode 'truly' represents spread spectrum as it is defined in the rules. The licensee of the station transmitting the emission is responsible for determining that the operation of the station complies with the rules. This would include determining the type of emission the station is transmitting and that the frequencies being used are authorized for that type of emission." End quote

Since that initial FCC review, several Internet sites have reported a claim -- attributed to the FCC -- that the original statements made had been reconsidered and that the regulatory agency's view was now that -- quote: "R-O-S cannot be viewed as Spread Spectrum and it would be encompassed within Section 97.309 which covers RTTY and data emissions codes."

The ARRL says that when queried about this new statement, the FCC's Consumer Assistance Office stated that -- and again we quote: "The information contained on the R-O-S website was not provided by the FCC."

The agency then reaffirmed the original statements that came from the FCC's Wireless Bureau, which handles Amateur Radio rules for the United States. In other words, as far as the FCC is concerned, the R-O-S mode can only be used by the hams that it licenses on frequency bands above 222 MHz. And that's where it stands with the FCC as we go to air.

For the Amateur Radio Newsline. I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

In its closing statement on the matter, the ARRL says that it supports the experimentation and advancing the technical skills of operators. But the League also reminds US licensees that according to Section 97.307, spread spectrum communications are only permissible in the US on frequencies above 222 MHz. (ARRL)

**

RADIO LAW: ROS CREATOR SAYS HES DEVELOPED A NEW NARROWBAND VERSION

As if this situation was not complicated enough, the creator of ROS, one Josï¿½ Alberto Nieto Ros, has announced the creation of a narrowband version of ROS that requires only 500 Hz. To operate.

He says that a technical description of this new version will be sent to FCC with the aim of gaining the agency's approval their approval for its use in the United States. Until then, the author says that he will not make public any technical explanation about this mode.

But here's where there may be a conflict. In his blog posting he claims that if you are a U.S. citizen, that you are in your perfect right to experiment with this new digital mode, until the FCC says otherwise. What he might not understand is that here in the United States hams must abide by the FCC Part 97 rules currently in place as well as any standing FCC declaration regarding the use of any mode. Also, that violating either could lead to anything ranging from a warning letter to a Notice of Violation or even a monetary fine. So while U-S hams can sit all day and receive and decode using any version of ROS, that they cannot transmit with it until they get a go ahead from the FCC. (Various sources)

**

RESTRUCTURING: NZ HAMS GRANTED TEMPORARY 600 METER ALLOCATION

Based on a request filed by New Zealand Association of Radio Transmitters that nations telecommunications regulator has agreed to grant New Zealand Amateurs temporary access to a slice of the 600 meter spectrum.

Beginning on March 1st, 505 to 515 kHz has been granted to them on a temporary basis pending an international allocation to radio amateurs and includes some restrictions. These involve a maximum radiated power not to exceed 25 watts effective radiated and a maximum bandwidth of 200 Hertz.

As in other parts of the world where hams have use of this band, these frequencies are, or may be, allocated for use by other services. As such, amateur operators must accept interference from, and must not cause interference to these other services.

On the international scene, work continues to gain a world-wide allocation in this area through the International Amateur Radio Union. If and when this is approved, it is likely that the New Zealand Amateurs will be granted a permanent allocation in the 600 meter area. (NZART)

**

RESCUE RADIO: TELECOMMUNICATIONS AND BROADCASTING RETURNING TO HAITI

Telecommunications and broadcasting are both slowly returning to earthquake ravaged Haiti. This according to Federal Communications Commission officials who went to Port-Au-Prince in January to assess communications damage and help that country's communications regulators with their restoration efforts.

--

As previously reported here on Newsline, the team was deployed in response to a request from Director General of Conatel, the communications agency in Haiti, in coordination with the U.S. Agency for International Development. In an update delivered to commissioners, FCC staffers Mindel Del La Torre, and Jamie Barnett, detailed the states of Haiti's communications and the ongoing efforts by the FCC to assist.

According to the two officials, hard-wired phones were heavily damaged. There were 108,000 telephone lines in the country in 2008. But the quake lead to a total loss of its wire-line infrastructure and those phones are still not working.

Wireless service fared better in the quake. De La Torre noted that Haiti had 2.5 million cell users before the quake. Now, with new equipment having replaced destroyed cell sites and cellular coverage is nearly back to 100%,

In the area of broadcasting some definite strides have been made. Before the earthquake Haiti had some 50 radio stations and 18 TV stations operating. Now, about 30 radio stations as well as six TV stations are back on the air.

For the Amateur Radio Newsline, I'm Jim, Meachen, ZL2BHF.

--

The FCC has said that it intends to help with the restoration of Haiti's telecommunications and broadcast infrastructure over the long term. Meantime a limited ham radio response is still at work aiding in quake relief efforts. (RW)

RADIO AND THE NET: NEW VERSION OF SDR-RADIO.COM RELEASED

A new version of SDR-Radio.com has been released by developer Simon Brown HB9DR. This is a Windows console for software defined radios developed specifically for the amateur radio and short-wave listener communities and provides a powerful interface for the rapidly growing number of SDR enthusiasts. This free software can be downloaded from www.sdr-radio.com. (SDR-RADIO)

**

NAMES IN THE NEWS: TWO FORMER SPACEHAMS LEADING COMMERCIAL SPACEFLIGHT

Two former space shuttle and space station commanders are now competitors in the start up world of commercial human spaceflight. Ken Bowersox, KD5JDP, and Frank Culbertson, KD5OPQ, are now respectively vice presidents at Space Exploration Technologies Corp. and Orbital Sciences Corporation which are two United States based companies at the forefront of the private space industry.

Space Exploration's Dragon capsule and Orbital Science's Cygnus spacecraft have already been selected by NASA to ferry cargo to the International

Space Station starting in 2011. Both companies are now vying for a NASA contract to begin developing vehicles capable of carrying humans to the International Space Station. Commercial providers could take up the job of carrying astronauts to and from the complex if President Obama directs NASA to revamp its current exploration program. (Spaceflight Now)

**

NAMES IN THE NEWS: THREE HAMS ACHIEVE HIGH SPEED CW RECORD

And talk about high speed Morse code. The latest High Speed Telegraphy Honor Roll has been published with three amateurs, LZ4UU, DJ1YFK and EW8VK, achieving an amazing 1231 characters per minute. For full details check out www.rufzxp.net. (Southgate)

HAMVENTION 2010: WEAK SIGNAL DINNER MAY 14th

The 2010 VHF Weak Signal Group Banquet held during the Dayton Hamvention will be on Friday evening May 14th, at the Doubletree Dayton Downtown Hotel at 11 South Ludlow Street, in Dayton. Anyone with an interest in weak signal VHF, UHF and Microwave is invited to attend. Seating is limited to 125 and reservations are required. Cost per person is $35. Reservation requests with full payment and an SASE go to Tony Emanuele WA8RJF, 7156 Kory Court, Concord Township, Ohio 44077-2221. And please include the names and calls of all attendees as well as an e-mail address if you have one. (VHF Group)

**

HAMVENTION 2010: LAST CALL FOR HAMVENTION 2010 AWARD NOMINATIONS
And if you are hearing this before March 15th it means that you only have a few days left to nominate individuals and clubs for the Hamvention 2010 awards. While the Special Achievement Award, Technical Excellence Award, and Amateur of the Year Awards have been given for many years, Awards Chairman Frank Beafore, WS8B, said this a year a special award will be given for Club of the Year. That award is tied to this year's Hamvention theme of "Amateur Radio Clubs Worldwide: The Lifeline."
Judging will begin as soon as the nominating March 15th deadline passes. Winners will be notified in April and publicly honored at Hamvention 2010 in the weekend of May 14th, 15th and 16th.
Information on how to file nominations is on line at www.hamvention.org. Just scroll down and click on the word awards on the right side of the screen. (Hamventionï¿½)

ON THE NET: NEW F1 MALWARE BUG DISCOVERED IN INTERNET EXPLORER

If you are a Windows XP user, listen up. Microsoft as well as the urban legends research service Snopes dot com both say that Windows XP users should not to press the F1 key when prompted by any website that they might visit. This due to an unpatched vulnerability that hackers could exploit to hijack PCs running certain versions of Internet Explorer. Amateur Radio Newsline's David Black, KB4KCH, has the details:

--

According to Microsoft, the vulnerability exists in the way that V B Script interacts with the Windows Help files when using Internet Explorer. If a malicious website displays a specially crafted dialog box, and if you press the F1 key, an arbitrary code could execute in the security context of the currently logged-on user.

Microsoft says the bug affects Windows 2000, Windows XP and Windows Server 2003. Plus, any supported versions of Internet Explorer on those operating systems could be leveraged by attackers. Users running IE6 on the XP operating platform plus IE7 and IE8 are said to be at risk.

Microsoft says--even if your windows system is up to date with all security patches--you should still avoid pressing F1 on dialog boxes presented from web pages or other Internet content.

The prompt can appear repeatedly when dismissed, nagging the user to press the F1 key. But Microsoft says not to pay attention to this demand and if it persists try closing and then re-opening Internet Explorer. The company says simply avoiding any website where a dialogue box tells you to press F1 is a good idea.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East Bureau in Birmingham, Alabama.

--

For those not aware, snopes.com is the Internet's best known urban legend debunking website. If it says that a story making the rounds of the World Wide Web is true, you can pretty much be certain that it is. And our thanks to Hap Holly, KC9RP, of RAIN for bringing this one to our attention. The full story with all reference material is at s.com/computer/virus/f1key.asp (RAIN)

RADIO RECORDS: GERMAN HAM CLAIMS 8.97 KILOHERTZ RECORD

An interesting record is being claimed by a German radio amateur. Markus Vester, DF6NM, of Nuremberg has been able to receive his test transmissions on 8.97kHz at a distance of 12.1 kilometers.

According to Vester, the transmitter was a 35 watt car radio audio amplifier offering up an Effective Radiated Power was about 1.3 microwatts using a relatively small antenna with 1.4 Henry loading coil. The receiving system consisted of a six meter long antenna feeding SpecLab software. (Various)

**

HAM RADIO IN SPACE: A CLOSE ENCOUNTER ON-ORBIT

The Amsat Oscar 51 ham radio satellite has survived a close encounter with the FORMOSAT-3 constellation of satellites. The close call took place on Monday, March 1st at 10:56 UTC. This as all of the satellites were over the Eastern United States.

According to AMSAT-NA Vice President of Operations, Drew Glasbrenner, KO4MA, the predicted miss distance was 953 meters, which is over 3000 feet. But the overall but the radial difference between the two orbits was only 39 meters. Given the orbital uncertainties of both satellites, an orbit separated by only 39 meters could mean that distance may become eaten up rather quickly.

As noted earlier, FORMOSAT-3 is a constellation of satellites launched on April 15, 2006. AO-51 is a bit older having been put into orbit on June 29, 2004. (ANS)

**

HAM RADIO IN SPACE: ARISS WINS BOSELLI PRIZE

The Italian radio listeners' society A-I-R has awarded the prestigious 2010 Boselli prize to ARISS, the Amateur Radio in the International Space Station project. In its announcement, A-I-R says that the award recognizes how ARISS has shown the importance of radio communications to hundreds of young students in Europe and beyond. A-I-R says that ARISS has spread the use of radio from the forefront of science in outer space to classrooms around the world. The Boselli prize will be presented at the A-I-R Annual General Meeting on May 8th in Faenza, Italy. (GB2RS)

**

ON THE AIR: UK HAM OPERATION TO HELP SAVE VULCAN BOMBER

Members of Newbury And District Amateur Radio Society in the United Kingdom will be activating GB0VUL during the month of March. This special event is to increase the awareness of the "Vulcan to the Sky Trust" and its efforts to save the only flying Vulcan XH558 bomber.

Operation is 80 through 10 meters using CW and SSB. While activity may take place all month, the main event of the month will be on the weekend of 20th and 21st. QSL via the RSGB Bureau, eQSL preferred or via G8JIP. More information on the Vulcan bomber is at www.nadars.org.uk/vulcan.asp (Southgate)

**

HAM HAPPENINGS: INTERNATIONAL MARCONI DAY AWARDS PROGRAM

The 23rd International Marconi Day will take place on April 24th. Although not a contest, awards can be obtained if you pre register for the event. Also, in order to qualify as an award station, operations should take place from a site that either used Marconi equipment prior to his death in 1937 or from which Marconi carried out experiments during the same period. Full details can be found at www.gb4imd.org.uk. (GB2RS, Southgate)

**

ON THE AIR: FRENCH HAMS CELEBRATE CONVENTION OF HUMAN RIGHTS

On the air, F6FQK reports that members of the "Council of Europe Radio Amateur Club will be active as
TP60CE between March 12th to the 14th. This to celebrate the 60th anniversary of the "Convention of Human Rights. Operations will be on CW, SSB, PSK and the Satellites. QSL via F5LGF. An online log search will be available at http://ewwa.free.fr (Southgate)

**

ON THE AIR: CELEBRATING ST. PATRICK'S DAY FROM ERIN'S ISLE

And Ireland's Foyle and District Amateur Radio Club, has been granted the special event callsign GB5SPD to celebrate St. Patrick's Day. The callsign will be used over several days, from March 15th until March 17th.

While most of the contacts will be SSB operators hope to also use digital modes as well. A special QSL card has been printed for the occasion and reports from SWL's are also welcome. More details can be found under GB5SPD on the qrz.com. (IRTS)

**

DX

In DX, word that WE9V will be active as from Jamaica as 6Y9V through March 14th. His activity will be on 160 through 10 with emphasis on 160, 30, 17 and 12 meters using CW, SSB and RTTY. QSL via WD9DZV.

G3RWF as 5X1NH will be on the air from Uganda until March 21st. QSL via his home callsign.

Also from Uganda, 5X7JD will be on the air until 25 May. QSL as directed on air.

HA5AO will be on the air from Lesotho as 7P8AO through March 28th using all modes and bands. QSL only via his home callsign.

DL7AFS and DL7ZG will sign V21ZG from Antigua for 18 days starting 16 March. They will concentrate on RTTY, PSK and SSB. This is another one to QSL as directed on the air.

And 5R8UI will be on the air from Madagascar until the end of the year. QSL to IK4ZUI.

DL7BC, will be active March 27th and 28th from Morocco as CN2BC during the CQ WW WPX SSB Contest. This, as a Single-Op/All-Band/Low-Power entry. QSL via DL7BC.

Lastly, NP3D will be active portable HR2 from Honduras between March 19th and the 29th. He will operate on all of the High Frequency bands using all modes, but will focus on 160 meters. QSL via W3HNK, RW6HS, or via Logbook of the World.

(Above from various DX news sources)

**

THAT FINAL ITEM HAM HEARS AND RECORDS MARS EXPRESS FLY-BY

And finally this week, talk about a true accomplishment for ham radio. This as the European Space Agency website reports that a radio amateur was able to receive and record the Mars Express mission on its recent flyby of the Martian moon Phobos. Bertrand Pinel, F5PL, from near Castelnaudary, France, used his 3.5 meter dish throughout the flyby to monitor the signal from Mars Express. Heres a sample of what he heard:

--

Actual fly-by audio.

--

The recording of the tone of Mars Express shifts from high to low because, at the time of the recording, Mars Express was traveling away from the Earth with a speed of 39 000 km/hr - accelerating as it went. This is the same Doppler effect as the sound of an ambulance siren changing as it passes you.

More on this story and F5PL's complete audio recording is on-line at http://webservices.esa.int/blog/post/7/1058 (Southgate)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard

Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

Source record: 1480

Hi,

I have a question, but first a few things I've been told:

I have a WRT54G that has been modified to operate just slightly off
the standard frequency for 802.11g.

It has been loaded with specially built software that allows these
devices to form an ad-hoc mesh network.

I'm told that this work was being done by a club in Austin Texas.

Does anybody out there know which club is doing this and/or where I
can find additional information about this?

I'd ask the guy I got the router from, but he is currently very ill
and unable to respond to my request and Google doesn't seem to be
turning up much information that is current. It sure sounds like a
useful thing to me.

Well, that was simple enough. EARCHI had a testing session this AM, and
I passed! I've been listening in to a couple of the local repeater nets,
getting a feel for local practices and personalities. Now comes decision
time...Yaesu or Icom? I'm leaning to the Icom dual band HT's right now.

For the home portable/base, would a mag mount on the corrugated metal carport roof work pretty well (vs. rooftop mag on the car)?

Congratulations! Now, that wasn't so hard, was it? ;-)

Very smart: listen first, talk later.

> Now comes decision time...Yaesu or Icom? I'm leaning to the Icom dual band
> HT's right now.

Everyone has an opinion.... and of course there are multiple models from
each. Others with experience with them might chime in.

> For the home portable/base, would a mag mount on the corrugated metal
> carport roof work pretty well (vs. rooftop mag on the car)?

Either should work well, though the corrugated metal might not give enough
of a mechanical grip or enough capacitance for a good RF ground (have I got
that right?) ;-) There are three common antenna lengths (that I know of)
for mobile antennas: 1/4 wave, 1/2 wave, and 5/8 wave. The 1/2 wave and 5/8
wave antennas will give you a lower angle of radiation (i.e., gain over a
1/4 wave). Your QTH sounds like it's well above Honolulu proper, and you
could probably take good advantage of the longer antennas. And if you can
see other islands, you shouldn't have any trouble working stations on them,
too.

Congratulations.

Put a cookie tin under the mag mount on the roof, it will stabilize
things.

Both companies make good products, but I suggest you wait a few weeks.
Attend a ham club meeting, and tell the members you're looking for a
rig: someone may have a loaner you can try out, or even one that
they'll part with for a good price to get you started.

If not, there are a lot of used rigs out there, that can be had for
reasonable money. Frankly, the trick is to go slowly and build your
"dream" station a little at a time, so that you don't spend your whole
slush fund on one mode or one rig and then find you don't want to keep
using it. Field Day and Emergency Communicaitons drills (EMCOM) are an
excellent way to see various modes and rigs in action. If possible, try
out all the modes your license covers, and find out if you'd be more
comfortable with hilltopping, or packet, or EmCom, or even microwave,
or whatever: try _before_ you buy.

> For the home portable/base, would a mag mount on the corrugated metal
> carport roof work pretty well (vs. rooftop mag on the car)?

The only way to know is to try it, so buy an antenna that will work
with your car and then give it a chance on the roof. Repeaters make up
for most of the antenna issues that used to plague VHF operators, and
so long as you're "Full quieting" into the machines you want to use,
you win.

If not, tell your XYL that the new DTV standard requires a tower, and
go from there. ;-)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

- A list of News Service Providers maintained by the Big-8 Management Board:

http://www.big-8.org/dokuwiki/doku.php?id=faqs:news_providers&s=news%20service%20providers

- A list of Public News Servers at the Open Directory Project:

http://www.dmoz.org/Computers/Usenet/Public_News_Servers/

- An article with links and reader suggestions at Broadband Reports:

http://www.broadbandreports.com/shownews/96318

- Google Groups:

http://groups.google.com

The rec.radio.amateur.moderated Moderation Team does not endorse or recommend any particular News Service Provider (NSP). We encourage our readers to choose the free or subscription service that best meets their own personal needs based on their own evaluation of the available alternatives.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

If you are an educator or if you know of one who might be interested in learning more about wireless technology, here is an announcement from ARRL HQ.

73, Art K&#65533;AIZ

****

We are currently accepting enrollments for the 2010 sessions of the Teachers Institute on Wireless Technology. Word of mouth has often been our best recruiting method so we invite the ham radio community to recruit teachers in their local schools who would find this opportunity interesting and rewarding.

The Teachers Institute is an exceptional professional development opportunity for teachers who want to explore the fundamentals of wireless technology, basic electronics, robotics and use amateur radio as a tool for learning in the classroom. The four day expenses paid seminar is funded by ARRL Education & Technology Fund donors. Teachers can also apply for graduate credit for the seminar.

The schedule of dates and locations for this year's sessions, as well as an agenda of topics, a downloadable brochure and applications are available on our website at www.arrl.org/ti. If you would like to request copies of the printed brochure, please contact the Education Services Dept. at ead@arrl.org.

This is EXCELLENT news!

When the ARRL announced this idea I was not to optimistic about the chances of getting this bill passed. We had just tried to get a simple set of exceptions from CC&Rs passed for ham radio antennas (and flag poles) here in Texas and failed so I didn't think we'd have much chance of getting this at the federal level. Not that this bill directly addresses the challenges of CC&Rs, which is why I'm guessing it has made it this far, but it is a step in the right direction.

IF we can get this bill though the house and signed into law, then we stand a chance at an impartial review of how ham radio's value to the country's security could be enhanced by a limited pre-emption of CC&R's. Although it's not a given, I welcome the chance of side stepping the lobbyist and effect of big money on the political landscape and have the issue studied.

Write your congressman..

> <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more
> information, including instructions on how to encourage the committee's
> leadership to support S 1755.

It may not make it possible for me to force the HOA to accept an antenna in my backyard legally, but it can only help ham radio in the USA to have this study done.

Thanks!

I would also suggest looking at mobile VHF radios. While larger than a handheld, they are also more powerful. You can run them off battery power in the house for an emergency fixed station or off your car batter for a mobile station.

Eventually you will probably want one of each if you want to get seriously involved in emergency communications.

If you used the ARRL study guide (not the shorter question/answer book), I believe that it contains instructions for a 2 meter J-pole. This is a very useful antenna for fixed station use as it doesn't need the ground plane like a standard vertical does. So basically you can connect where you like (although you might want to get it away from other metal objects for best results).

Dee, N8UZE

Mahalo, I'll look into that antenna. I do have the ARRL Level 1 Ham
Manual. I've got a couple of options on where/how to set up antennas.

I have definitely checked out the mobiles, but have decided to start
with the HT. When I get a better feel for various bells/whistles, and
limitations (or not) of my QTH, I will no doubt get a bigger rig. I also
anticipate upgrading to general within a short time, and will need to
consider HF.

271. Foundation for Amateur Radio Scholarships

Newsgroup: rec.radio.amateur.moderated
Date: 2010-03-16 19:54:18 UTC

I received the following email from Jim Cross, WI3N, Section Manager for
Maryland-DC.

The deadline is pretty close. Please consider nominating one of the
young hams in your area.

73,
Art K&#65533;AIZ
****

Hello SMs,

I know a number of sections have recipients of these scholarships.

Sorry about the timing, but perhaps you could alert your constituents.

The deadline of March 31 for The Foundation for Amateur
Radio scholarship applications is fast approaching.

Scholarships are open to all licensed amateurs who are
pursuing a full-time course of studies beyond high
school and are enrolled in or have been accepted for
enrollment at an accredited university, college or
technical school.

If you or someone you know fits the above description,
please go to the F.A.R. website,
http://www.farweb.org/scholarships/index.php, download
the application and directions, get signatures from
organizations where applicable, and mail it in time to
meet the March 31 cut-off date.

The Foundation for Amateur Radio administers scholarships
on behalf of Amateur Radio Clubs, organizations, and
private individuals. The Foundation administers these
scholarships without cost to the applicants or sponsors.

73, Jim Cross WI3N
SM MDC

ARRL Nebraska Section
Section Manager: Arthur I. Zygielbaum, K0AIZ

==> REGIONAL CONFERENCE ON AMATEUR RADIO 2010 (RCAR 2010)

The following information is from Ole Garpestad, LA2RR, IARU Vice-President.

The Regional Conference on Amateur Radio will be held April 4 - 6, 2010 in Doha, State of Qatar and will be the biggest Regional Symposium on Amateur Radio in the Middle East in 2010.

The Conference is organized by the QATAR AMATEUR RADIO SOCIETY (QARS) jointly with the International Amateur Radio Union (IARU). So far the kind invitation from the QARS Chairman <http://tinyurl.com/ybecgf6> H.E. Abdullah bin Hamad Al-Attiyah, A71AU, has been accepted by a number of IARU societies in the Middle East as well as one from Region 3 together with Telecom Regulators and Administrations from the GCC area. Participation is also expected from ITU officials as well as local Qatar officials. The IARU team will consist of: IARU Vice President Ole Garpestad, LA2RR, IARU Region 1 President Hans Blondeel Timmerman, PB2T and IARU Region 1 EC-member Hani Raad, OD5TE.

The symposium gives the delegates the opportunity to exchange information related to the Amateur Radio Service in the Arab World along with the regulatory aspects in connection with the Amateur Radio Service. The program consist of presentations on Regulatory issues, preparation for WRC-12, Amateur Radio Emergency and Disaster Communication, national regulations of Amateur Radio in the GCC States combined with panel discussions and workshops with the aim to assist in building and maintaining good working relationship between the National Regulators and the Amateur Radio Societies.

Doha has been launched by UNESCO as the capital of the Arab culture and a celebration of "Al-Doha Capital of Arab Culture 2010" with H.E. Minister of Culture, Arts and Heritage will take place during the RCAR 2010 event.

More information on the invitation, program, hotel and visa may be found in related documents available on the IARU Region 1 web or obtained from any of the IARU team members listed above.

==> WIRELESS INSTITUTE OF AUSTRALIA CELEBRATES 100 YEARS

The Wireless Institute of Australia (WIA) is celebrating 100 years of organized amateur radio in Australia.

On 11 March, 1910 a meeting of like-minded people in the Hotel Australia, Martin Place, Sydney, formed the Institute of Wireless Telegraphy of Australia, and soon after dropped the word 'telegraphy' from its name. Chairman of the founding meeting, George Taylor, proposed "the formation of an institution amongst experimenters and enthusiasts in wireless for their mutual benefit."

A similar organisation was formed in Melbourne - the Amateur Wireless Society of Victoria, on 30 November 1911 at a meeting attended by 50 enthusiasts. In 1913 it changed its name to the Wireless Institute of Victoria, and then became the Wireless Institute of Australia, Victorian Division. Then followed The Wireless Institute of Queensland (1912), the West Australian Radio Club (1913) became the Wireless Institute of Australia, Western Australia Section.

In May 1924 the Institute at a federation meeting held in Melbourne resulted in a nation-wide organisation to represent the experimenters, an outcome that had been desired for some time by the Postmaster General who had responsibility for wireless. Exactly 100 years on from that first meeting in Sydney, the experimenters, now known as radio amateurs, can legitimately celebrate the establishment of their representative organisation, the Wireless Institute of Australia - the oldest such group in the world.

A range of initiatives and activities are to happen in 2010 providing an opportunity for every radio amateur to be involved in what will be a memorable celebration. Special event callsign VK100WIA will be very popular. Make it a personal aim to make contact this station, consider your plan to achieve the WIA Centenary Award and if a club member support its involvement in the celebration. A commemorative logo is now available for use by WIA members on their QSL cards. Want to know more? Full details are available on the WIA website through its homepage at www.wia.org.au and look under the 'WIA Centenary Celebrations' section. It contains a lot of information including activities, the commemorative logo, Centenary Award, the VK100WIA special event callsign -its roster, online log and QSL card - plus a range of affordable centenary merchandise. Credit-WIA web site.

==> BILL WILSON, VE3NR, SK

The International Amateur Radio Union expresses its profound regret of the recent passing of Bill Wilson, VE3NR. Bill was a strong supporter of the amateur radio service with his work for the

Canadian regulator at the International Telecommunications Union. He provided support and guidance to the Canadian IARU member society for many years. Bill mentored a number of prominent individuals including Robert Jones VE7RWJ, the former Director of the Radiocommunication Bureau at the ITU.

IARU President Tim Ellam VE6SH remembers Bill was instrumental in assisting Canadian amateurs with planning for WARC-92. "Bill Wilson was one of the best friends amateur radio could have. His guidance and support to Radio Amateurs of Canada and its predecessor societies cannot be underestimated" Ellam said. IARU President Emeritus, Larry Price W4RA, recalled that WARC-92 was a turning point in the future relationship between CARF and CRRL when neither organisation could agree on a single spokesperson for amateurs in Canada and this eventually resulted in proposals to combine the two to have a single national Society, R.A.C. "Bill Wilson was a strong leader who did not lose sight of the eventual goal of representing well the radio amateur's interests, he is sorely missed."

The IARU and its member societies express its deepest sympathies to Bill Wilson's family.

==> IARU REGION 2 ASSISTS MEMBER SOCIETY WITH EARTHQUAKE DAMAGE

At the 2007 Triennial IARU Region 2 Conference, the General Assembly established a Region 2 Relief Fund. Like many other areas around the world, portions of R2 are situated in areas that are subject to numerous hurricanes, severe storms, floods, earthquakes and other types of natural disasters. During some of these natural disasters, Region 2 national amateur radio societies have suffered severe or extreme damage to their society stations and buildings, including antenna systems. The societies in Region 2 felt there was a need for a process of collecting donations and distributing donations to Region 2 Member Societies who have suffered damage to their national society stations or buildings that are due to natural disaster.

The resolution passed unanimously by the Region societies at the conference directed that funds accumulated in the Region 2 Relief Fund shall be distributed by the R2 Executive Committee solely to assist Region 2 Member Societies for repairing or rebuilding stations and buildings, including antenna systems, because of damages resulting from natural disasters. Member Societies that receive funds from the Region 2 Relief Fund must provide a report with the R2 Executive Committee detailing for the use of such funds. The conference set aside an initial 5,000 USD for the fund.

In February of this year, Chile suffered a severe earthquake which registered 8.8 on the Richter scale. The headquarters station for the Chilean member-society, Radio Club de Chile, suffered major damage to its building and its antenna system. RCCH asked the R2 EC for monetary assistance from the R2 Relief Fund and the R2 EC agreed to assist the society with funds to help repair its HQ building and

antenna system.

This is an excellent example of the IARU stepping in to help one of its member-societies in a time of need.

If your national society would like to assist the RCCH with a donation, please contact the Region 2 Secretary, Ramon Santoyo XE1KK at xe1kk@iaru.org.

==> IARU QUESTIONS WHETHER CERTAIN MEMBER-SOCIETIES STILL EXIST

At the IARU Administrative Council meeting in October, 2009, a procedure was adopted to deal with the situation of non-existent or non-functioning member-societies. Under this newly adopted procedure, if the IARU regional organization determines that there is no evidence of the continued existence of the society for a period of 5 years then the regional organization may request that the Administrative Council publish a notice in the IARU /Calendar/ its belief that the society has ceased to exist and calling for the submission of any evidence to the contrary within 180 days of such publication. If no evidence of the continued existence is presented to the AC within the 180-day period then that Member-Society shall be deemed to no longer exist. After that, if there is an amateur organization within the country that believes it can perform the duties of an IARU Member-Society then it can apply for IARU membership.

Three IARU Member-Societies in Region 3 will be listed in the IARU /Calendar/ number 189 that fall within this category of non-existent or non-functioning societies. They are: Papua New Guinea (PNGARS), French Polynesia (CORA) and Burma (BARTS). IARU /Calendar/ number 189 will likely be published about the same time this E-Letter is received.

==> IARU OPERATING AWARD FOR WORKED ALL CONTINENTS (WAC)

The IARU issues Worked-All-Continents certificates to amateur radio stations around the world that work all six continental areas.

Qualification for the WAC award is based on an examination by the International Secretariat, or a member-society, of the IARU of QSL cards that the applicant has received from other amateur stations in each of the six continental areas of the world. All contacts must be made from the same country or separate territory within the same continental area of the world.

All QSL cards (no photocopies) must show the mode and/or band for any endorsement applied for.

Contacts made on 10/18/24 MHz or via satellites are void for the 5-band certificate and 6-band endorsement. All contacts for the QRP endorsement must be made on or after January 1, 1985 while running a maximum power of 5 watts output or 10 watts input.

For amateurs in the United States and in an area without IARU representation, the WAC application forms are available in MS Word <http://www.iaru.org/wac/wac.doc> and Adobe PDF <http://www.iaru.org/wac/wac.pdf> format. Once completed, applications should be directed to the WAC Awards Manager, ARRL, 225 Main Street, Newington, CT USA 06111. After verification, the cards will be returned and the award sent soon afterward. Also, approved DXCC card checkers can verify WAC program applications. For the latest list of DXCC card checkers visit <http://www.arrl.org/awards/dxcc>. There is a $13.00 fee for US applicants. Sufficient return postage, or, a self-addressed stamped envelope, is required for the return of QSL cards. US amateurs must have current ARRL membership. At the present time credits in the ARRL LogBook of The World (LoTW) system cannot be claimed for WAC credit. Applicants who have a current DXCC award in the DXCC computer system can apply for WAC by completing the WAC application form and sending it to the address noted above, listing credits to be claimed on the application form. In this case QSL cards are not required. Send questions to wac@arrl.org.

For all other amateurs, applicants must be members of their national amateur radio societies <http://www.iaru.org/iaru-soc.html> affiliated with IARU <http://www.iaru.org/>, and apply through the society.

If you have any information that would be appropriate to publish in this electronic newsletter, please contact me at w6rod@iaru.org.

Rod Stafford W6ROD
IARU Secretary

The IARU E-Letter is published on behalf on the Administrative Council of the International Amateur Radio Union by the IARU International Secretariat. Editor: Rod Stafford, W6ROD, IARU Secretary.

Material from The IARU E-Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The IARU E-Letter and The International Amateur Radio Union.

==> FCC NEWS: FCC RELEASES NATIONAL BROADBAND PLAN

<http://www.youtube.com/watch?v=QYf2AVCdzZw> On Tuesday, March 16,
the FCC held an Open Meeting to introduce its report Connecting
America: The National Broadband Plan (NBP) that was delivered to
Congress that afternoon. Calling it "an ambitious agenda for connecting
all corners of the nation while transforming the economy and society
with the communications network of the future -- robust, affordable
Internet," the Commission found that nearly 100 million Americans lack
broadband at home today and 14 million Americans do not have access to
broadband. Read more here
<http://www.arrl.org/news/stories/2010/03/16/11393/?nc=1>.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S.1755

Senate Bill 1755 -- The Amateur Radio Emergency Communications
Enhancement Act of 2009 introduced in October 2009 by Senators Joe
Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed
the US Senate and has been sent to the US House of Representatives for
```

consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160; HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee (D-TX-18). Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the process. Click here <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

==> LEGISLATIVE AFFAIRS: COMPANION BILL INTRODUCED IN US HOUSE TO PROVIDE TECHNICAL RESOURCES TO FCC COMMISSIONERS

Following the Senate's lead, Representatives Jerry McNerny (D-CA-11) and Tom Petri (R-WI-6), introduced HR 4809 -- the FCC Commissioners' Technical Resource Enhancement Act -- in the House of Representatives on March 10. Copying the exact language from S 2881 (a bill with the same name) introduced by Senators Olympia Snowe (R-ME) and Mark Warner (D-VA) in December 2009, the bill seeks to provide greater technical resources to FCC Commissioners. Read more here <http://www.arrl.org/news/stories/2010/03/16/11392/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> FCC NEWS: FCC PROPOSES TO ELIMINATE SPREAD SPECTRUM APC REQUIREMENT, REDUCE SPREAD SPECTRUM POWER LIMIT; CLEANS UP PORTIONS OF PART 97

In response to a 2006 ARRL Petition regarding spread spectrum issues, the FCC released a Notice of Proposed Rule Making (NPRM) on March 16 (WT Docket No 10-62), proposing to amend Part 97 to facilitate the use of spread spectrum communications technologies by eliminating the requirement that amateur stations use automatic power control (APC) to reduce transmitter power when the station transmits a spread spectrum (SS) emission and reducing the maximum transmitter power output when transmitting a SS emission. Through an Order attached to the NPRM, the Commission also made "certain non-substantive revisions"

to the Amateur Service rules. Read more here
<http://www.arrl.org/news/stories/2010/03/18/11396/?nc=1>.

==> ARRL PUBLICATIONS: ARRL INTRODUCES UNDERSTANDING BASIC ELECTRONICS,
SECOND EDITION

ARRL's Understanding Basic Electronics, second edition
<http://www.arrl.org/catalog/?item=0823> -- your gateway into the
exciting world of electricity and electronics -- is written in a
friendly, easy-to-understand style that beginners and nontechnical
readers will enjoy. This introductory guide is ideal for students with
basic math skills, as well as radio amateurs and experimenters
interested in gaining a more complete understanding of basic electronic
principles -- anyone eager to unlock the mysteries of electronic
circuits.

Authored by Walter Banzhaf, WB1ANE, this new edition features
student-friendly math made easy -- an inexpensive calculator is all you
need -- and now includes digital electronics. Even if you already have
a foundation in basic electronics, you will enjoy the small module
format of each chapter, allowing readers to digest "bite-sized" chunks
of learning material. Real-world examples and clear illustrations make
the study of electronics interesting and fun! A handful of small
"kitchen table" projects are included to help bring abstract concepts
to life.

Understanding Basic Electronics, second edition includes chapters on
electronics, analog and digital electronic circuits, electrical terms,
conductors, insulators and resistors, electricity and magnetism,
capacitors and inductors, electrical circuits (both series and
parallel), Ohm's law, techniques and tricks on how to solve circuit
problems, energy and power, alternating current (ac), capacitors and
inductors, transformers, impedance, resonant active device concepts,
semiconductors, diodes, transistors and ICs -- and much more.

For a limited time, ARRL members can purchase Understanding Basic
Electronics, second edition for only $29.95
<http://www.arrl.org/catalog/?item=0823> -- that's $3 off the regular
price of $32.95!

==> SOLAR UPDATE

Tad "Doubt that the Sun doth move, doubt truth to be a liar, but
never doubt I love
<http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=hamlet
&Act=2&Scene=2&Scope=scene>"
Cook, K7RA, reports: Solar activity recovered nicely from the March 6-9
frightening absence of sunspots, reminiscent of years prior to the end
of November 2009. For our reporting week -- March 11-17 -- the average
daily sunspot numbers increased relative to the prior week by 17 points
to 29.4; the average daily solar flux was up by 9 points to 87.6. A new
sunspot group -- 1055 -- appeared on March 11, following the appearance

of 1054 the day before. Group 1055 only lasted a couple of days and another new spot, 1056, emerged on March 17 and is still visible and active. On March 11-12, a solar wind met a south-pointing interplanetary magnetic field (IMF) and pushed geomagnetic instability, especially pronounced at higher latitudes. Alaska's college K index at Fairbanks went to 5 during several 3-hour readings over both days. So far in March, the average daily sunspot number is 23.9. Every month of March since the end of the last century, the average (1999-2009) was 100.5, 203.6, 166.7, 154.3, 119.7, 81, 41, 21.3, 9.8, 15.9 and 0.77. Sobering, isn't it? And no, that isn't an error for 2009. March of last year had sunspots on only two days -- March 6-7 -- pushing the average for the month to less than one. This Saturday, March 20, is the vernal equinox, the first day of spring, which begins at 1732 UTC. Both the southern and northern hemispheres are bathed in an equal amount of sunlight; the time around the spring and fall equinox is great for HF propagation. Look for more information on the ARRL Web site on Friday, March 18. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Shakespeare's Hamlet (Act II, Scene 2) <http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=hamlet&Act=2&Scene=2&Scope=scene>.

==> THIS WEEK ON THE RADIO

This week, the 10-10 International Mobile Contest is March 20. The Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party are March 20-21. The Virginia QSO Party and the BARTG HF RTTY Contest are March 20-22. The Run for the Bacon QRP Contest is March 22 and the SKCC Sprint is March 24. Next week, the CQ WW WPX Contest (SSB) is March 27- 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> SILENT KEY: BABY BLINDNESS PIONEER ARNALL PATZ, EX-WA3EVC (SK)

Dr Arnall Patz, ex-WA3EVC -- an ophthalmologist who discovered and eliminated a major cause of blindness in premature infants -- passed away from heart disease on March 11. He was 89. In 1954, Patz proved that treating premature babies with pure oxygen could destroy their eyesight. At the time, this was the most common cause of blindness in premature infants. Although the new understanding came too late for thousands of people who were made blind by oxygen -- including the singer Stevie Wonder, ARRL Connecticut Section Manager Betsey Doane, K1EIC, and her twin sister Barbara Lombardi, K1EIR -- it undoubtedly saved many more from a similar fate. "Barb and I are thrilled to learn

that the doctor who discovered the effect of too much oxygen at birth was a ham. We only wish we had met him or worked him on the air. How exciting that would have been!" Doane told the ARRL. Patz operated a ham radio from his home on behalf of the Maryland Eye Bank. According to his nephew Sam, Patz erected an 80 foot tower at his home and became known to amateurs across the country for putting out the word on the airwaves whenever corneas were needed for transplant. Read more here <http://www.arrl.org/news/stories/2010/03/17/11395/?nc=1>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1701 - March 19, 2010

Amateur Radio Newsline report number 1701 with a release date of
Friday, March 19th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Germany protects its hams from cable
interference by saying no to a cable system that wanted protection from
broadband sharing: the FCC asks for input in preparation for W-R-C
2012, and the ARRL says its time to ask congress to back the Emergency
Communications Enhancement Act. All this and more on Amateur Radio
Newsline(tm) report number 1701 coming your way right now.

RADIO LAW: GERMAN COURT REFUSES TO PROTECT CABLE OPERATOR FROM 800 MHz
BROADBAND

A German court's decision to deny a cablecaster from ingress protection
by wireless broadband turns out to be good news for that nations hams.
Frank Haas, KB4T, has the details:

--

A German cable television operator has failed in its attempt to enjoin that
nation's government from auctioning off spectrum in the 800 MHz range.
This
for fear that signal ingress from new wireless broadband systems might
interfere with the cable system's operations.

The Deutscher Amateur Radio Club, which is Germany's national ham radio
society, reports that the Cologne Administrative Court has rejected the
action brought by Kabel Baden-Wuerttemberg. In its denial order the court
said that if the cable operator was afraid of interference it could take
technical steps to improve its system.

The Deutscher Amateur Radio Club views the ruling positively since it will
encourage cable operators to upgrade leaky cable systems. This it says will
not only keep the cable system from suffering signal ingress of any 800 MHz
transmissions, it should also reduce the interference that leaky cable
systems cause to radio amateurs.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill ,
Florida.

--

For decades cable operators in Germany have claimed their networks are RF tight and there could be no problem with cable interference to any radio bands. This, despite the fact that the audio channel of one station has disrupted the Amateur Radio use of 145.750 MHz for many years. The DARC report can be seen in Google translated English at http://tinyurl.com/yjdcch9 (DARC)

RADIO LAW: FCC PROPOSED LOWERING HAM RADIO SPREAD SPECTRUM POWER IN EXCHANGE FOR DOING AWAY WITH APC RULE

We all know that the use of Spread Spectrum in ham radio has been in the news a lot of late and it is once again. This time the form of a Notice of Proposed Rule Making issued by the Commission on March 16th.

The NPRM is in response to an ARRL petition regarding use of the mode. In 2006, the ARRL petitioned the FCC, requesting that the Automatic Power Control requirement be eliminated , asserting that the provision has proven to be virtually impossible as it requires the operators of the transmitting stations to determine the transmitter power received at distant receivers. This claimed the League that this requirement has proven to be something of a barrier to Spread Spectrum experimentation.

In the new NPRM, the FCC agreed with the ARRL that the Automatic Power Control requirement may be unnecessarily impeding Amateur Radio operators in advancing the radio art,. At the same time the Commission does not propose to simply eliminate the requirement.

Noting that the purpose of the Automatic Power Control requirement is to limit interference to other stations, the FCC pointed out that commercial broadband Internet service providers operating in the 900 MHz and 2.4 GHz I-S-M bands argue that the Automatic Power Control requirement should be maintained. This, in order to prevent interference to other users. They also referred to suggestions maintaining that if the Automatic Power Control requirement is eliminated, the FCC should lower the maximum power limit on amateur stations transmitting Spread Spectrum emissions so that interference is minimized.

And the bottom line: The FCC says that it is proposing to eliminate the Automatic Power Control requirement, but the caveat. The FCC is also proposing to reduce the maximum transmitter power output amateur stations may use when transmitting Spread Spectrum communications from 100 watts to a peak of only 10 watts.

In the Order, the FCC also made amendments to correct the Amateur Service rules or conform them to prior Commission decisions. These revisions will take effect once they are published in the Federal Register. The NPRM is not yet available for comment. Its text can be found on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-38A1.pdf. (FCC, ARRL, Others)

RADIO LAW: FCC ASKS INPUT IN PREPARATION FOR NEXT WRC

The International Bureau of the Federal Communications Commission is seeking input from interested parties to help develop its recommendations to the U.S. Department of State for U.S. proposals and positions concerning possible revisions to the International Telecommunication Regulations. This, at the next World Conference on International Telecommunications to revise the terms of the treaty in 2012.

Specifically, the FCC is looking for input on Article 1, Purpose and Scope of the Regulations; Article 2, which are Definitions; Article 3 on International Networks; Article 4 that deals with International Telecommunication Services and Article 5 that covers Safety of Life and Priority of Telecommunications. Also needed in input on Article 6 covering Charging and Accounting; Article 7, Suspension of Services; Article 8, Dissemination of Information; Article 9, Special Arrangements; and Article 10 which are all of the Final Provisions.

The FCC serves as a technical advisor to the Department of State for ITU meetings and conferences, including the upcoming World Conference on International Telecommunications and other international meetings to prepare for that conference. In that role, the FCC provides expert advice and recommendations to the Department of State on U.S. proposals and positions. (FCC)

**

RADIO POLITICS: ARRL SAYS NOW IS THE TIME TO SUPPORT THE AR EMCOMM ENHANCEMENT ACT

The United States Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman and Susan Collins has been unanimously passed the Senate. Its now been sent to the House of Representatives for consideration and is currently sitting in the House Committee on Energy and Commerce.

Now, the ARRL is asking hams nationwide to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160 which was introduced in April 2009 by Representative Sheila Jackson Lee. Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the overall approval process.

If enacted into law, S 1755 would instruct the Secretary of Homeland Security to undertake a study on the uses and capabilities of Amateur Radio communications in emergencies and disaster relief. It would also limit the Department of Homeland Security to 180 days to report its findings to Congress. (ARRL)

**

RESTRUCTURING: CANADIAN HAMS GRANTED VLF ALLOCATION

Canadian hams now have a Very Low Frequency band. This with word that Industry Canada has approved access by radio amateurs in that nation to the

band from 135.7 to 137.8 kHz, subject to certain conditions.

Canadian hams choosing to use this new band are limited to a maximum radiated power of 1 watt Effective Radiated Power. They also cannot cause harmful interference to stations of other nations that still use this spectrum as a radionavigation service.

According Radio Amateurs of Canada the Revised Canadian Table of Frequency Allocations, announced in December 2009 to incorporate changes from decisions made at World Radiocommunication Conference in 2007.

One of these permits amateur use of this spectrum on a secondary basis to all other users. (RAC)

**

RESTRUCTURING: DENMARK GIVES HAMS 5 MHZ

The Southgate news says that Danish radio amateurs can now apply to operate in 5.250 to 5450 MHz band. Reports are that Bent Christensen, Oh-Zed 0-5-B has already received a 5MHz permit. More on this restructuring is on-line at the Danish national amateur radio society's website. A link to it in electronically translated English is at http://translate.google.co.uk/translate?u=http%3A%2F%2Fwww.edr.dk%2F&slda&tl=en&hl=&ie=UTF-8)

RADIO LAW: FCC'S NATIONAL BROADBAND PLAN GOES TO CONGRESS

The FCC has sent its long awaited National Broadband Plan to Congress. Released on Tuesday, March 16th, the Plan is deemed to be a call for action over the next decade that includes goals.

Among these are to provide affordable access to ultra-high-speed broadband in every American community at a speed of at least 1 gigabit per second at anchor institutions such as schools, hospitals, and military installations. It also recommends connect 100 million households to affordable 100-megabits-per-second service by building the world's largest market of high-speed broadband users and ensuring that new jobs and businesses are created in the United States.

Perhaps the most interesting point to those involved in hobby radio is the proposal to provide every first responder with access to a nationwide,

wireless, interoperable public safety network. One that would multiply redundant and let responders anywhere talk with others directly or through a chain of command.

Other than that there is nothing remotely mentioned that directly affects ham radio, however the devil could be in the details if and when Congress gives the FCC a green light to proceed. And the details we are referring to are in the UHF and microwave spectrum which broadband providers believe is ideal for future service build-outs and expansion of services.

You can read the entire document on-line at www.broadband.gov/plan/ (FCC)

**

RADIO RULES: FCC WANTS TO REVISE EX PARTE PRESENTATIONS

A new way of dealing with the FCC may be on the horizon. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

The FCC has proposed that anyone who gives an oral ex parte presentation before it would have to provide a written description of the discussion. Currently such descriptions are required only when new material is involved.

In its recent notice, the commission is asking for comment on whether to require that companies meeting with the commission should disclose ownership information in meeting summaries or filed pleadings. This, so readers can better grasp the filer's interest in the proceeding.

The agency is thinking of requiring summaries within four hours for an item that's to be on the agenda during its open monthly meeting during the seven-day "sunshine period" immediately before those meetings.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF.

--

For those not aware. ex parte is a Latin legal term meaning from, by or for one party. Ex parte rules are intended to make sure the public is aware of who is possibly influencing the regulators' decision process.
(RW)

**

RADIO LAW: FCC WANTS TO STREAMLINE IT PROCEEDURES

The Federal Communication Commission has put forth several proposals to streamline its procedures.
One of its main objectives is to give bureau and office chiefs the ability to kill defective or repetitive petitions for reconsideration so those don't reach the Commissioners or their staff floor.

By way of background, a defective petition for rule making or for reconsideration is one that contains errors, is untimely, has raised no new arguments, or does not relate to the issue at hand. In ham radio circles this might be one of those regularly filed petitions asking for a ban on closed repeaters or limiting contesters to specific parts of the amateur radio bands. Requests that are either ignored for a long period of time or dismissed using the same language as used to discharge a previous petition making the same request.

The agency has also proposed changing its rule that specifies it can reconsider a decision on its own motion within 30 days. This, to clarify that the Commission has the authority to change a verdict, and not just set it aside or vacate it.

Lastly, the Commission wants to make more use of electronic filing and has upgraded its Electronic Comment Filing System. Now, it is asking for comments on how it can maximize e-filing and minimize paper submissions.

The FCC notes that with over 3,000 dockets open, it has quite a backlog to go through. It also admits that some of those dockets have seen little to no activity in years. (TVT)

**

RADIO LAW: SENATE COMPANION FCC ENGINEER BILL INTRODUCED

A Senate bill that would add an engineer to the staff of each Federal Communications Commission commissioner now has a companion measure in the House. Representative Jerry McNerney of California introduced H.R. 4809 after representatives of the Society of Broadcast Engineers met with his Washington staff a few weeks ago.

SBE's Government Relations Chairman Barry Thomas and General Counsel Chris Imlay, W3KD, visited offices of several House members to garner support for a companion to a Senate bill introduced in January by Senator Olympia Snowe, of Maine, and co-sponsored by Sen. Mark Warner, of Virginia. The bill would authorize an engineering staff person for each of the five FCC commissioners. With a House bill now introduced, the legislation can move through the committee process of both houses of Congress.

SBE President Vinny Lopez said the change would go a long way to ensure technical excellence at the highest levels of the commission.

McNerney is a second-term congressmen representing California's 11th congressional district, which includes a portion of California's Central Valley. He has an engineering background and is a member of the House Commerce Committee and the subcommittee on Communications, Technology and the Internet.

The text of the House bill was not yet available online as we write. (RW)

**

RADIO LAW: LOTS OF AMERICANS HAVE NO BROADBABD

The FCC has determined that about one-third of Americans don't have a broadband Internet connection at home. According to a report from the regulatory agency the main barriers to adoption are cost and literacy.

The agency is working on a plan to deploy nationwide wireless broadband. The usage study, "Broadband Adoption and Use in America," was
released at the Brookings Institution. There appears to be no mention of how many Americans do not want or feel that they have no need for any form of broadband connectivity. (Government report)

**

PUBLIC SERVICE: VOLUNTEERS NEEDED FOR PITTSBURGH MARATHON

About 150 hams will be needed to provide communications for this years running of the Pittsburgh Marathon. Slated for May 2nd, over 6000 participants are expected, including 2000 marathon runners, 2500 half-marathon runners, and 500 relay teams.

According to Jeffrey Hutzelman, N3NHS, there are many positions around the 26.2 mile course that need to be covered, including mile markers, aid stations, buses and sweep vehicles and shadow communicators for race officials. If you plan to be in the Pittsburgh area on that date and want to volunteer, simply take your web browser to marathon.central.org, click on the words "Volunteer Now" and fill out the form.

RESCUE RADIO: RNW SENDS RADIO STATION IN A BOX TO CHILE
Radio Netherlands Worldwide is sending two complete mobile radio stations to the Chilean broadcaster Radio Universidad Tï¿½cnica Federico Santa Maria. This will enable two of its partner stations in the coastal region of Maule to resume their broadcasts as quickly as possible. This is the region was seriously affected by the earthquake on February 27th.

The mobile radio station, often called radio-in-a-box, is specially built to be used temporarily in countries where radio stations are forced off the air by natural disasters. Each station is less than a cubic meter in size, and is equipped with an FM transmitter, mixer, microphones, a CD player and a laptop computer. Radio Netherlands Worldwide has previously provided such stations following the earthquakes in Indonesia in September 2009 and Haiti this past January. The Chilean broadcaster supplied with the portable gear has worked closely with Radio Netherlands Worldwide for many years. (Media Network)

THAT FINAL ITEM: NEW INTEREST IN SILICON NANOWIRES

Silicon nanowires are attracting an increasing level of attention from technologists and industry. This, due to their drive to create ever-smaller electronic devices will depend on these mechanical properties.

New research from North Carolina State University shows that silicon nanowires are far more resilient than their larger counterparts. This is a finding that could pave the way for smaller, sturdier nanoelectronics, nanosensors, light-emitting diodes and other yet to be thought up applications.

According to a recent study, silicon nanowires deform in a very different way from bulk silicon. Bulk silicon is very brittle meaning that it cannot be stretched or warped very much without breaking . On the other hand, silicon nanowires are more resilient, and can sustain much larger deforming before rupturing.

Other properties of silicon nanowires include increasing fracture strength and decreasing elastic modulus as the nanowire gets smaller and smaller. This study was funded by grants from the National Science Foundation and North Carolina State University. (Adapted from Science Daily)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

BREAKING NEWS: DAYTON HAMVENTION(c) ANNOUNCES 2010 AWARD WINNERS

Three amateur radio (ham) operators who have made significant contributions to the Amateur Radio Service, will be honored guests when Hamvention¿½ 2010 opens in Hara Arena on May 14. In addition, a club of the year will be honored in keeping with the 2010 Hamvention theme, Amateur Radio Clubs Worldwide: The Lifeline.

Recipients of this year's Hamvention¿½ awards are:

Special Achievement - Dick Ross/K2MGA for his excellent work over the past number of years on CQ magazine.

Technical Excellence - Simon Brown / HB9DRV for the invention and development of Ham Radio Deluxe.

Amateur of the Year - Jim Stafford / W4QO for 50 years of service to Amateur Radio and his support for public service and unending efforts to recruit and develop hams of all ages.

Club of the Year - North Fulton Amateur Radio League, NFARL, North Fulton, GA - Serving the greater Atlanta Area, the State of Georgia and the US with emergency services, training and the preparation of Amateur Radio in general.

" Choosing the finalists was a difficult process due to the number of fine nominations" said Frank Beafore, Chairman of the Awards Committee. This year, an additional award category was added - Club of the Year. This award honors a ham radio organization that contributes to the good of Amateur Radio.

"Although we narrowed our club choice to North Fulton, GA, we had a number of deserving candidates" stated Beafore. "The winner of this year's award is certainly a great example of the thousands of clubs and organizations around the world perpetuating our avocation".

An intimate dinner on May 15 will be held in downtown Dayton honoring the 2010 Hamvention Award winners.

> Is there a point to presenting the statistics?

Yes there is, If you archive Jim's post then come back a year from now
you can see if the hobby is growing or shrinking, and how it is growing

For example.. A few years ago I was listed in the "Technician with HF"
group... Now I'm not (All other classes, Extra to be specific)

But it is important to know if we are growing or fading into the sunset.

Personally.. I prefer growth

And the stats.. They tell the story

Generally yellow is for "Hazard" (tow trucks, Snow plows and other vehicles that may be on the side of the road and it means "Don't run into me" Red or Blue is what I would call "Public Safety" (police/Fire/EMS) IN some states the use of rotating or flashing lights is regulated by law.. Michigan (Where I'm from) is one such.

Now.. If I'm, for example, sitting on a traffic crash, the use of a YELLOW "Kojack Light" is allowed.. However a co-worker of mine got written up when he used one under those conditions.. He did not violate the law.. but "Company" rules (I'm a retired police dispatcher.. He is still a police dispatcher,, In fact he made supervisor after I retired)

However.. I drive a Lumina APV (if I get it working again) not many vehicles are as "Visible" as a Lumina van or mini-van when in 4-way flasher mode. Thus.. Though I have a "kojack Light" (I think) somewhere.. 1: Not in car and 2: I don't actually know where it is.

I do carry a regulation set of D.O.T. Triangles however... AND the book that tells me how to lay 'em out (What every commercial driver must know, published, in my case, by the Michigan Secretary of State (DMV for Michigan)) a very useful book.

I also drive a 38' motor home towing said Lumina on occasion.

Well.. Congrats on Passing... I kind of recall how you feel..

You see,, I got my first license (novice) back about 1968, Then my second (Fall same year Tech class, and remained stuck there for what, 38 years... Finally I broke tradition and visited Dayton, walked into the testing session and did the paper upgrade to General, bought a TS-2000 and quickly found that unlike the hand held I used as a Tech.. It was able to transmit on frequencies not allowed a General class licensee.

So.. I took a class, well 2/3 of it as I was leaving town, and the Saturday before thanksgiving.. I fixed that TS-2000 so it would not transmit out of band.. I fixed it using a #2 lead pencil and a dollar store calculator.... (I got 2 wrong on the Extra Class Test)

Congrats on joining the ranks of the licensed.. May good fortune follow you all of your days.

Congratulations!

I still remember how nice it felt to say "Temporary AE" for the first
time.

Thank you LEN... I have long forgotten when the internet became public, 1991, good to know.. I first logged on to Compuserve as 73455,43 in 1983 using a VIC-20 and a VIC 1011A modem. 300 baud (well you could push it to 450 for the same price) and folks we paid by the minute for connect time back then so I used a modified "Fast-Doc" to download messages fast as the modem could stream them to memory, then print 'em out and compose replies off line as a script file and upload 'em later. Not easy on a VIC-20, even with full memory expansion (Which I had)

I'm still on what's left of Compuserve under my call (WA8YXM) though the Ham Radio forum is long gone... There are still some good groups left there.. However it's now an AOL-Web Property and farmed out to some folks who have no concept of how a forum should be hosted so many of the features that made classic Compuserve the single greatest service in the world... History. But many of the good people who also helped to make it great... Still there.

But it's nice to know the internet became "live" in 1991 (Public)

Well,, I kind of never did that.. Cause when I did the upgrade to
General, I also got the TS-2000 same day, but rather than end up with
one arm considerably longer than the other from lugging it all over
Dayton Convention center.. I had 'em ship it (I'm serious, that WAS the
reason) and by the time I got back home.. Well.. The license was waiting
and the radio arrived a couple of days later.. No no "Temp" there.

And when I did the upgrade to Extra.. ... Well,, I don't often stray out
of the General bands anyway.. So again, I never needed to sign "Temp"
as... Well.. I just don't use those frequencies much

Usually it's like 2973 or 3995 or x.070 (Many different X's)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Before the Federal Communications Commission Washington, D.C. 20554

In the Matter of

Amendment of Part 97 of the Commission's Rules Regarding Amateur Radio Service Communications During Government Disaster Drills))))))

WP Docket No. 10-72

NOTICE OF PROPOSED RULEMAKING

Adopted: March 18, 2010 Released: March 24, 2010

Comment Date: (30 days after publication in the Federal Register).
Reply Comment Date: (45 days after publication in the Federal Register).

By the Commission:

I. INTRODUCTION

1. In this Notice of Proposed Rulemaking, we propose to amend the Commission's amateur radio service rules with respect to amateur radio operations during government-sponsored emergency preparedness and disaster readiness drills and tests. Although public safety land mobile radio systems are the primary means of radio-based communications for emergency responders, experience has shown that amateur radio has played an important role in preparation for, during, and in the aftermath of, natural and man-made emergencies and disasters. Current rules provide for amateur radio use during emergencies. At the same time, the rules prohibit communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. While there are some exceptions to this prohibition, there is none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for such emergency situations and transmit messages on behalf of their employers during such drills and tests. Accordingly, we propose to amend the rules to provide that, under certain limited conditions, amateur radio operators may transmit messages during emergency and disaster preparedness drills, regardless of whether the operators are employees of entities participating in the drill.

II. BACKGROUND

2. One of the fundamental principles underlying the amateur radio service is the "[r]ecognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications." Further, the rules state that "[n]o provision of these rules prevents the use by an amateur station of any means of radio communication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available." Indeed, amateur radio operators provide essential communications links and facilitate relief actions in disaster situations. While land mobile radio services are the primary means of conducting emergency communications, amateur radio plays a unique and critical role when these primary facilities are damaged, overloaded, or destroyed. For example, during Hurricane Katrina, amateur radio operators volunteered to support many agencies, such as the Federal Emergency Management Agency, the National Weather Service, and the American Red Cross. Amateur radio stations provided urgently needed wireless communications in many locations where there was no other means of communicating and also provided other technical aid to the communities affected by Hurricane Katrina.

3. Since amateur radio is often an essential element of emergency preparedness and response, many state and local governments and public safety agencies incorporate amateur radio operators and the communication capabilities of the amateur service into their emergency planning. In this regard, some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have emphasized the participation of their employees who are amateur station operators in emergency and disaster drills and tests. For example, a representative of the New Orleans Urban Area Security Initiative recently emphasized the importance of conducting emergency drills and the need for amateur participation.

4. The Commission's rules expressly permit operation of amateur stations for public service communications during emergencies, and on a voluntary basis during drills and exercises in preparation for such emergencies. Given, however, that the Amateur Radio Service is primarily designated for "amateurs, that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest," the rules expressly prohibit amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Accordingly, public safety entities seeking to have employees operate amateur stations during government-sponsored emergency preparedness and disaster drills presently must request a waiver.

III. DISCUSSION

5. We seek comment on whether to amend the rules to permit amateur radio operators to participate in government-sponsored emergency and

disaster preparedness drills and tests, regardless of whether the operators are employees of the entities participating in the drill or test. The rules already recognize the importance of amateur radio in emergencies, and permit participation in such drills and tests by volunteers (i.e., non-employees of participating entities). As noted above, experience has shown that amateur operations can and have played an essential role in protecting the safety of life and property during emergency situations and disasters. And as evidenced by recent waiver requests, state and local government public safety agencies and other entities often conduct disaster and emergency preparedness drills to be best-prepared for such eventualities. The proposed rule would obviate the need for a waiver in such instances by allowing employees of public safety agencies and other entities to operate amateur stations for testing and drilling of emergency communications preparedness. We thus tentatively conclude that employee status should not preclude or prevent participation in government-sponsored emergency and disaster tests and drills. Further, we tentatively conclude that extending authority to operate amateur stations during such drills will enhance emergency preparedness and thus serve the public interest.

6. In reaching these tentative conclusions, we do not disturb the core principle of the amateur radio service as a voluntary, non-commercial communication service carried out by duly authorized persons interested in radio technique with a personal aim and without pecuniary interest. Rather, we believe that the public interest will be served by a narrow exception to the prohibition on transmitting amateur communications in which the station control operator has a pecuniary interest or employment relationship, and that such an exception is consistent with the intent of the amateur radio service rules. Accordingly, we propose that amateur operations in connection with emergency drills be limited to the duration and scope of the drill, test or exercise being conducted, and operational testing immediately prior to the drill, test or exercise. 7. Furthermore, we propose that the emergency tests and drills must be sponsored by Federal, state, or local governments or agencies, in order to limit the narrow exception to ensure that drills further public safety. We note, however, that there may be circumstances where conducting emergency drills for disaster planning purposes, even if not government-sponsored, would serve the public interest. Accordingly, we seek comment on whether we should permit employee operation of amateur stations during non-government-sponsored emergency drills, if the purpose of the drill is to assess communications capabilities, including amateur radio, in order to improve emergency preparedness and response.

8. A large number of agencies and organizations at the state and local levels coordinate with their local volunteer amateur radio operators to conduct drills and exercises in concert with other modes of communication. This joint activity is essential to allow for a practiced response on the part of the first responder community.

Because some of those drills and exercises include transmission of amateur communications by employees of participating entities, we believe the proposed rule changes would be in the public interest, consistent with ongoing national emergency preparedness and response priorities. We therefore seek comment on the tentative conclusions contained herein.

III. PROCEDURAL MATTERS

9. Initial Regulatory Flexibility Certification. The Regulatory Flexibility Act (RFA) requires an initial regulatory flexibility analysis to be prepared for notice and comment rulemaking proceedings, unless the agency certifies that "the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities." The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction." In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act. A "small business concern" is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).

10. Because "small entities," as defined in the RFA, are not persons eligible for licensing in the amateur service, this proposed rule does not apply to "small entities." Rather, it applies exclusively to individuals who are the control operators of amateur radio stations. Therefore, we certify that the proposals in this Notice of Proposed Rulemaking, if adopted, will not have a significant economic impact on a substantial number of small entities. The Commission will send a copy of the Notice of Proposed Rulemaking, including a copy of this Initial Regulatory Flexibility Certification, to the Chief Counsel for Advocacy of the SBA. This initial certification will also be published in the Federal Register.

11. The rulemaking shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's ex parte rules. Persons making oral ex parte presentations are reminded that memoranda summarizing the presentations must contain summaries of the substance of the presentations and not merely a listing of the subjects discussed. More than a one or two sentence description of the views and arguments presented generally is required. Other requirements pertaining to oral and written presentations are set forth in Section 1.1206(b) of the Commission's rules.

12. Comment and Reply Comment Filing Instructions. Pursuant to sections 1.415 and 1.419 of the Commission's Rules, 47 C.F.R. ï¿½ï¿½ 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the front page of this document. Comments may be filed using: (1) the Commission's Electronic Comment Filing System (ECFS), (2) the Federal Government's eRulemaking

Portal, or (3) by filing paper copies. See Electronic Filing of Documents in Rulemaking Proceedings, 63 Fed. Reg. 24121 (1998).

ï¿½ Electronic Filers: Comments may be filed electronically using the Internet by accessing the ECFS: http://www.fcc.gov/cgb/ecfs/ or the Federal eRulemaking Portal: http://www.regulations.gov. Filers should follow the instructions provided on the website for submitting comments. ï¿½ For ECFS filers, if multiple docket or rulemaking numbers appear in the caption of this proceeding, filers must transmit one electronic copy of the comments for each docket or rulemaking number referenced in the caption. In completing the transmittal screen, filers should include their full name, U.S. Postal Service mailing address, and the applicable docket or rulemaking number. Parties may also submit an electronic comment by Internet e-mail. To get filing instructions, filers should send an e-mail to ecfs@fcc.gov, and include the following words in the body of the message "get form." A sample form and directions will be sent in response.

ï¿½ Paper Filers: Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number. Filings can be sent by hand or messenger delivery, by commercial courier, or by first-class or overnight U.S. Postal Service mail (although we continue to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Federal Communications Commission. ï¿½ The Commission's contractor will receive hand-delivered or messenger-delivered paper filings for the Commission's Secretary at 236 Massachusetts Avenue, NE, Suite 110, Washington DC 20002. The filing hours at this location are 8:00 am to 7:00 pm. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of before entering the building. ï¿½ Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743. ï¿½ U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street, SW, Washington DC 20554. People with Disabilities: To request materials in alternative formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to fcc504@fcc.gov or call the Consumer and Government Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (tty).

13. Interested parties may view documents filed in this proceeding on the Commission's Electronic Comment Filing System (ECFS) using the following steps: (1) Access ECFS at http://www.fcc.gov/cgb/ecfs. (2) In the introductory screen, click on "Search for Filed Comments." (3) In the "Proceeding" box, enter the numerals in the docket number. (4) Click on the box marked "Retrieve Document List." A link to each document is provided in the document list. Filings and comments are

also available for public inspection and copying during regular business hours at the FCC Reference Information Center, 445 12th Street, SW, Room CY-A257, Washington, DC 20554. Filings and comments also may be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., Portals II, 445 12th Street, SW, Room CY-B402, Washington, DC 20554, telephone 1-800-378-3160, or via e-mail to fcc@bcpiweb.com. This Notice of Proposed Rulemaking also may be downloaded from the Commission's web site at http://www.fcc.gov/.

14. Congressional Review Act. The Commission will send a copy of this Notice of Proposed Rulemaking to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. ï¿½ 801(a)(1)(4).

15. Paperwork Reduction Act Analysis. This Notice of Proposed Rulemaking does not contain proposed information collection(s), subject to the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, therefore, the Notice of Proposed Rulemaking does not contain any proposed new or modified "information collection burden for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, see 44 U.S.C. ï¿½ 3506(c)(4).

16. Federal Rules that May Duplicate, Overlap, or Conflict with the Proposed Rules. None.

17. For further information, contact Jeffrey Cohen, Senior Legal Counsel, Public Safety and Homeland Security Bureau, (202) 418-0799, or via e-mail at Jeff.Cohen@fcc.gov.

IV. ORDERING CLAUSES

18. Accordingly, IT IS ORDERED, pursuant to sections 4(i), 303(r), and 403 of the Communications Act of 1934, 47 U.S.C. ï¿½ï¿½ 154(i), 303(r), and 403, that this Notice of Proposed Rulemaking is HEREBY ADOPTED.

19. IT IS FURTHER ORDERED that the Commission's Consumer and Governmental Affairs Bureau, Reference Center, SHALL SEND a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analyses, to the Chief Counsel for Advocacy of the Small Business Administration.

Federal Communications Commission Marlene H. DortchSecretary

APPENDIX

Proposed Rules

Part 97 of Chapter 1 of Title 47 of the Code of Federal Regulations is amended as follows:

The authority citation for part 97 continues to read as follows:

AUTHORITY: 48 Stat. 1066, 1082, as amended; 47 U.S.C. 154, 303. Interpret or apply 48 Stat. 1064-1068, 1081-1105, as amended; 47 U.S.C. 151-155, 301-609, unless otherwise noted.

1. Section 97.113 is amended by revising paragraph (a)(3), adding new paragraphs (a)(3)(i) and (a)(3)(ii), redesignating paragraphs (c) and (d) as new paragraphs (a)(3)(iii) and (a)(3)(iv) respectively, and redesignating paragraphs (e) and (f) as (c) and (d) respectively, to read as follows:

ï¿½ 97.113 Prohibited transmissions.

(a) ***

(3) Communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer, with the following exceptions:

(i) A control station operator may participate on behalf of an employer in a government-sponsored emergency preparedness or disaster readiness test or drill, limited to the duration and scope of such test or drill, and operational testing immediately prior to such test or drill.

(ii) An amateur operator may notify other amateur operators of the availability for sale or trade of apparatus normally used in an amateur station, provided that such activity is not conducted on a regular basis.

>Amendment of Part 97 of the Commission's Rules Regarding Amateur Radio
>Service Communications During Government Disaster Drills))))))

I have been expecting this. Apparently the FCC is being deluged with
waiver requests.

But they are not going far enough. The NPRM (and the waiver system)
only deals with hams who work for government entities. It also should
apply to hams who work for other disaster relief organizations, like
the Red Cross and the Salvation Army.

Dick AC7EL

==> ARRL EXECUTIVE COMMITTEE EXAMINES PROPOSED VANITY CALL SIGN
CHANGES, LEGISLATIVE, REGULATORY ISSUES, MORE

The ARRL Executive Committee (EC) held its first 2010 meeting
Saturday, March 13 in Denver. The EC worked through a lengthy agenda
that for the first time had been shared in advance with ARRL members --
the result of an ARRL Board action at its January meeting intended to
increase transparency in the governance of the organization.

The EC administers the League's affairs in between Board meetings. It
consists of the President (Kay Craigie, N3KN), five Directors elected
annually by the Board, and - without vote - the First Vice President
(Rick Roderick, K5UR) and Executive Vice President (David Sumner,
K1ZZ). For 2010 the Director members are Tom Frenaye, K1KI (New
England), George R. Isely, W9GIG (Central), Brian Mileshosky, N5ZGT
(Rocky Mountain), Bob Vallio, W6RGG (Pacific) and Dr David Woolweaver,
K5RAV (West Gulf). Also in attendance at the meeting were General
Counsel Chris Imlay, W3KD; Vice President Bruce Frahm, K0BJ, and
International Affairs Vice President Jay Bellows, K0QB. Read more here

```

==> FCC NEWS: FCC ISSUES NOTICE OF PROPOSED RULE MAKING ON GOVERNMENT DISASTER DRILLS AND AMATEUR RADIO

On March 24, the FCC released a Notice of Proposed Rule Making (NPRM) proposing to amend the Commission's Amateur Radio Service rules "with respect to Amateur Radio operations during government-sponsored emergency preparedness and disaster readiness drills and tests." While current rules provide for Amateur Radio use during emergencies, the rules prohibit communications where the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. In October 2009, the FCC released a Public Notice clarifying the Commission's rules relating to the use of Amateur Radio by licensed amateurs participating in drills and exercises on behalf of their employers. To date, the FCC has granted several dozen waivers under this new policy.

The FCC notes that while there are some exceptions to this prohibition, "there is none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for such emergency situations and transmit messages on behalf of their employers during such drills and tests." Based on that, the Commission proposes to amend the rules to provide that, under certain limited conditions, Amateur Radio operators may transmit messages during emergency and disaster preparedness drills, regardless of whether the operators are employees of entities participating in the drill. Read more here <http://www.arrl.org/news/stories/2010/03/25/11405/?nc=1>.

==> GLITCH DELAYS LAUNCH OF NEW ARRL WEB SITE

The ARRL's launch of a new Web site has been delayed following problems that appeared as the huge computer programs were being transferred to their main Web server. Normally the Web site connects ham radio operators around the world, dynamically presenting the services that ARRL offers the ham radio community at www.arrl.org. "When we tried to switch over to the new Web site on Wednesday, we encountered unanticipated technical issues during the process of transferring to the new Web site," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "It appears that with all of the new technology and vast simultaneous hits to the site, the code had problems keeping up. We are working to fix the issues and should be online very soon. We have temporarily switched back to the old Web site until these issues are resolved. Obviously, we are trying to complete this transfer as quickly as possible and we will keep you informed of our progress."

==> DAYTON HAMVENTION(R): ANNOUNCING THE 2010 DAYTON HAMVENTION AWARD WINNERS

Three Amateur Radio operators who have made significant contributions to the Amateur Radio Service will be honored guests when the 2010 Dayton Hamvention(R) opens in Hara Arena on May 14. In addition, Hamvention organizers will recognize a Club of the Year in keeping with the 2010 Hamvention theme: Amateur Radio Clubs Worldwide: The Lifeline.

"Choosing the finalists was a difficult process due to the number of fine nominations," said Hamvention Awards Committee Chairman Frank Beafore, WS8B. Click here <http://www.arrl.org/news/stories/2010/03/25/11403/?nc=1> to read more about these three deserving individuals and a club that personifies what Amateur Radio is all about.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S 1755

Senate Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed the US Senate and has been sent to the US House of Representatives for consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160; HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee (D-TX-18). Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the process. Click here <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan.

The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Be sure to get your comments in by Monday, April 5. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> SOLAR UPDATE

Tad "We are too much like oysters observing the Sun through the water, and thinking that thick water the thinnest of air <http://www.classicreader.com/book/309/7/>" Cook, K7RA, reports: The average daily sunspot numbers were down nearly 5 points this week from last week -- 24.6. A new sunspot group 1057 appeared on March 23, and by March 24, it was 25 times its original size. It covered 10 one-millionths of the solar hemisphere on Tuesday; on Wednesday, it

grew to 25 one millionths. This is the largest area seen since February 11. Just past the Northern Hemisphere's spring equinox, radio conditions are good and geomagnetic indices are still quiet. In fact, the mid-latitude A index for March 21-23 was 0 for all days. Look for more information on the ARRL Web site on Friday, March 26. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Herman Melville's Moby Dick <http://www.classicreader.com/book/309/7/> (Chapter 7, "The Chapel").

==> THIS WEEK ON THE RADIO

This week, the CQ WW WPX Contest (SSB) is March 27- 28. Next week, look for the Lighthouse Spring Lites QSO Party on April 1-11. The QRP ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest are April 3-4. The Missouri QSO Party is April 3-5 and the Low Power Spring Sprint is April 5. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

HAMVENTION 2010: DAYTON AWARD WINNERS ANNOUNCED - PART 1

The Emmy, Oscar and Tony awards of amateur radio have been announced, and this year there's a ham radio Grammy as well. But its not for music. Rather its for being for what the Dayton Hamvention Awards Committee considers the club most representative of the hobby. Bruce Tennant, K6PZW, is here with the story of this years Dayton award winners:

--

W4QO: "Well it was a total shock. In fact I almost got weak in the knees and fell to the floor because I didn't think they got the right guy. So it was a big shock to me."

**

That's 2010 Dayton Radio Amateur of the Year Jim Stafford, W4QO, telling Amateur Radio Newsline how he felt when he received the call from the Hamvention Awards Committee. A call telling him that he had been selected as this years top honoree.

According to the Hamvention Awards Committee, W4QO was selected for this honor based on his half century of dedication to the hobby during which he has accomplished so much that we have no time to list them all, but here ate some of them.

Stafford is a founding member of the North Georgia QRP Club, he is the past president of the North Fulton Amateur Radio League, the past president of the Metro Atlanta Telephone Pioneer Amateur Radio Club, and is a member of several other ham radio organizations. And back in 1993 he was named as the recipient the prestigious Herb Brier Instructor of the Year award by the American Radio Relay League. . He tells Amateur Radio Newsline that he enjoys just about all aspects of ham radio from DXing to home-brewing to working with youngsters who want to get to know the thrill of ham radio. He also says that it all began when he himself was just a kid:

--

W4QO: "I grew up on a farm as farm-boy in Indiana and I discovered amateur radio when I was about 15 and got my license when I was 16. And that really shaped my entire life because that lead me into looking into things like Electrical Engineering and colleges and universities that taught that. So I feel as though ham radio has played a big role in my life and anything I have done to help other people has been kind of motivated by saying '-hey it worked for me and maybe it will work for you.' "

--

The Hamvention says that it is honoring Stafford for his 50 years of service to amateur radio, his support for public service and unending efforts to recruit and develop new hams of all ages. Among his other accomplishments the Awards Committee noted was his service to the 14000 member QRP Amateur Radio Club International. Better known as QRP ARCI this group is the world-wode organization promoting the construction and operation of low powered amateur radio gear.

--

W4QO: "QRP is kind of misunderstood in a way. Most QRP'ers are tinkerers. They like to build things. And its easier to build a 5 watt radio or transceiver than it is to build a 100 watt or a 1000 watt transceiver and it costs a lot less and you can do a lot more of them if you build small transceivers. And so most people who are QRP'ers are really -- I would say -- first into construction -- build things -- build kits -- make kits -- and so on. So the organization is promoting -- as their magazine says -- it's the QRP construction and operating sourcebook."

--

The recognition of Jim Stafford, W4QO, has been greeted with enthusiasm by the Georgia ham radio community. In a posting to Q-R-Zed dot com, Bob Ross,WA2EXZ, of Roswell says that this is most deserving recognition to a great amateur radio operator as well as a wonderful man. He says that Jim Stafford gives so much of his time and energy to the hobby and service of amateur radio. He adds that Stafford has a tremendous passion for teaching others and especially the younger crowd. A group that W4QO seeks out to learn about and enjoy amateur radio.

And in a related item, the first ever Hamvention Radio Club of the Year Award will be presented to the North Fulton Amateur Radio League of Atlanta Georgia. This for both its resurgence as a major as a major provider of emergency communications as well as its work in public service and training. Wes Lamboley,W3WL, is a club spokesman. He tells Newsline that the success of the rebirth of the club is really about its members:

--

W3WL: "Its about a whole bunch of people that are really inspired to pass the word about what a great hobby amateur radio is. And our leader in getting all of this going is the ham of the year. So we are very pleased with his being the awardee this year and we are very pleased about our club being recognized as well. But we couldn't have done it without Jim Stafford's leadership".

--

By way of background, in 2006 the North Fulton Amateur Radio League was on the verge of extinction. It had only 6 to 12 people attending its regular low budget dinner and rag chew. Today, the club has grown to 260 very active members. 81% of the membership belong to the ARRL and 15% are youth. As a result, the North Fulton Amateur Radio League is now considered a truly exciting and dynamic organization, and one that proves that amateur radio clubs can change to meet the times.

HAMVENTION 2010: DAYTON AWARD WINNERS ANNOUNCED - PART 2

The 2010 Hamvention Special Achievement Award winner is Richard Ross, K2MGA. He is being honored for his half century career dedicated to serving ham radio through CQ Magazine. Better known as Dick Ross to his many friends world-wide, K2MGA began his career at CQ in 1960. He became Editor of CQ in July, 1964, when the magazine's then owner, Cowan Publishing, moved its offices from New York City to Long Island. By 1979, he was General Manager and Controller for all of Cowan Publications, which back then consisted of seven magazines. CQ was not the strongest of them, and Publisher Richard Cowan, WA2LRO, was considering shutting it down. Sensing an opportunity, K2MGA and his successor as CQ Editor, the late Alan Dorhoffer, K2EEK, bought the magazine from the Cowan family and set out to build it into a totally new publication that would instill a new vitality to the ham radio hobby. And it did.

Dick and Al quickly got the new CQ on a solid footing and within three years, they were ready to start expanding. Popular Communications was introduced in 1982. In the years since then, CQ has published a variety of magazines and books. In 1992, the company added videos to its product line, followed by CDs, DVD's calendars and more. Today, CQ Communications publishes CQ, Popular Communications, CQ VHF and WorldRadio Online. The latter, acquired in late 2008, is the first major on-line-only ham radio magazine.

But that's not where the K2MGA story ends. Over the course of the past 50 years, Dick Ross has also become a respected leader in the ham radio community. He works closely with the many businesses that make up the ham industry, as well as with contesters, DXers and other active hams through oversight of the CQ contest and award programs. He is also responsible for starting the CQ DX, CQ Contest and CQ Amateur Radio Halls of Fame. Each of these honors outstanding amateurs in various areas of the hobby.

Dick Ross is keenly aware that the real future of amateur radio lies in the next generation of hams. As such he is a fervent supporter of bringing more youth to our hobby. He dedicates space in CQ and Worldradio Online to the achievements in ham radio by its youngest members through the "Kids Korner" column in CQ written by teenager Brittany Decker, KB1OGL. Worldradio OnLine features the longtime popular "Youth Column" penned by 1987 Hamvention Radio Amateur of the Year, Carole Perry, WB2MGP.

In yet another youth oriented undertaking, since 1996, Dick and CQ have been one of two key corporate underwriters -- the other being Vertex-Standard / Yaesu -- of the "Amateur Radio Newsline Young Ham of the Year Award." As a result, beginning in 1996 everyone selected to be a Young Ham of the Year Award recipient has been offered the opportunity to attend Spacecamp-Huntsville and take the course of his or her choice.

Last but by no means least, this years Technical Achievement Award winner is Simon Brown, HB9DRV. Brown is being honored for his for the development of Ham Radio Deluxe. Ham Radio Deluxe or H-R-D is a suite of free Windows-based programs providing computer control for commonly used transceivers and receivers. It also includes the mapping, satellite tracking and the digital mode program called Digital Master 780.

Simon Brown was first licensed GD8IQM in February 1974. He became GD4ELI in September 1975. He now resides in what he describes as the beauty of the Swiss Alps, near Laax, Switzerland. After taking a break of 17 years from amateur radio he became licensed as HB9DRV and his interest in applying digital technology to amateur radio lead to the creation of Ham Radio Deluxe.

For the Amateur Radio Newsline, I'm .Bruce Tennant, K6PZW, in Los Angeles.

--

This years Hamvention Awards winners will be honored at Hamvention 2010 slated for the weekend of May 14th to the 16th at the Hara Arena in suburban Dayton, Ohio. In the meantime we at Amateur Radio Newsline join with the Hamvention Awards Committee and the world wide amateur radio

community in congratulating this years honorees. (ARNewsline(tm) with some information provided by Hamvention 2010)

**

MANES IN THE NEWS: FCC HAM RADIO ENFORCER TO ATTEND GREATER BALTIMORE HAMBOREE

If you hear this before the weekend of March 27 & 28th then be aware that the Greater Baltimore Hamboree and Computerfest will be held rain or shine, at the Maryland State Fairgrounds. One of those speaking will FCC chief ham radio rules enforcer, Laura Smith. For more information go to www.gbhc.org on the World-Wide-Web. (KB3JQQ)

RESCUE RADIO: FCC ISSUES NPRM TO PERMIT HAM EMPLOYEES TO TAKE ART IN DRILLS

The FCC has issued a Notice of Proposed Rule Making to permit limited use of hams in their employ to take part in emergency and disaster preparedness drills. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

The FCC is proposing a limited amendment the amateur radio service rules. This, with respect to operations during government-sponsored emergency preparedness and disaster readiness drills and tests.

Current rules provide for amateur radio use during emergencies. At the same time, the rules -- specifically section 97.113 (a)(3) -- prohibits communications in which the station licensee or control operator has a pecuniary interest. This includes any communications on behalf of an employer, whether direct or indirect. Translated it means that even if a ham employee is off the clock he or she cannot take part in emergency training exercises.

The FCC says that while there are some exceptions to this prohibition, there is currently none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for emergency situations. Nor may they transmit messages on behalf of their employers during such drills and tests.

The FCC notes that public safety land mobile radio systems are the primary means of radio-based communications for emergency responders. But it goes on to add that experience has shown that amateur radio has played an important role in preparation for, during, and in the aftermath of natural and man-made emergencies and disasters.

The FCC says that amateur radio is often an essential element of emergency preparedness and response. Because of this, many state and local governments and public safety agencies incorporate amateur radio operators and their communication capabilities into their emergency planning. In this regard, some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have emphasized the participation of their employees who are amateur station operators in emergency and disaster drills and tests.

Based on what it terms as a public need, the FCC is proposing to amend Section 97.113 of the Amateur Service rules to provide that, under certain limited conditions, amateur radio operators may transmit messages during emergency and disaster preparedness drills.

This, regardless of whether the operators are employees of government entities participating in the drill. It also seeks comments on whether certain other drills that are not sponsored by government agencies -- such as those conducted by hospitals -- should be included in the proposed exemption as well.

WP Docket No. 10-72 will carry a commentary cutoff date of 30 days after publication its publication in the Federal Register. Reply comments will be due no later than 45 days after publication in the Federal Register. As we go to air those dates have not yet been announced.

In the Newsroom in Los Angeles, I'm Bill Pasternak, WA6ITF.

--

The full text of FCC W P Docket No. 10-72 can be read at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf (FCC)

**

RESCUE RADIO: CHILIAN HAMS DRAW PRAISE FOR RESPONSE TO QUAKE

There has been high praise for the Radio Club of Chile and its members following the recent earthquake and its aftershocks. At least one television news report describes the Chilean radio amateurs as a group of dedicated operators scattered across the country, proving to be an information lifeline during recent events.

According to news reports, while telephones and the internet largely failed, many of the radio operators had back-up power and were able to provide vital lines of communication. These were picked up by National Radio Chile and rebroadcast, giving status information of the various affected areas. The report went further to say that claims that ham radio is dying were put to rest as these operators provided some truly vital communication links.

For its part, the Radio Club of Chile has expressed its thanks to the world's radio amateurs for keeping emergency frequencies free during their nation's time of need. (GB2RS)

**

RADIO LAW: CEPT TO MEET IN ISTANBUL

The International Amateur Radio Union Region 1 website reports that LZ1US will represent ham radio interests at the annual European Conference of Postal and Telecommunications Administrations or C-E-P-T Civil/Military meeting of the Frequency Management Working Group. That gathering takes place over the 30th and 31st of March. It will be followed by a meeting of the CEPT WRC 12 Conference Preparatory Group Project Team C running from April 6th to the 9th.

While there are no immediate matters to concern the amateur services during the Civil/Military meeting the IARU believes that it is always a good opportunity to have a presence. This, just in case matters arise that could affect amateur radio.

But the second meeting could affect amateur radio interests. The Project Team C meeting will discuss, among other things, WRC 12 Agenda Item 1 point 23. This is the International Amateur Radio Union proposal for a secondary frequency ham radio allocation around 500 kHz. (GB2RS)

**

NAMES IN THE NEWS: VE4JS RETURNED TO MANATOBA SM OF RAC

Some names in the news. First a word of congratulations to Jan Schippers, VE4JS, who was recently returned as Section Manager for Manitoba, Canada. This, for a two year term of office that will begin on July 1, 2010. Schippers was unopposed eliminating the need for a balloted election. (RAC)

**

HAMVENTION 2010: YOUTH FORUM ADDS PRIZE FOR ADULT ATTENDEES

Carole Perry, WB2MGP, reports that Icom has offered to donate a radio as a prize for the adults attending her three hour extended Youth Forum at Hamvention 2010. This, in addition to the gear it donates to reward the young speakers taking part in the session.

According to WB2MGP, this is the first time the adults can have a chance for a prize at the Youth Forum. She adds that Ray Novak, N9JA, of Icom America has been just terrific in supporting the session through the donation of prizes for the kids and now one for the adults as well.

This years Hamvention Youth Form will be on Saturday, May 15th, 9:15 a.m. to 12:15 p.m.. The session will be held in Meeting Room 1 at the Hara Arena in suburban Dayton, Ohio. (WB2MGP)

**

NAMES IN THE NEWS: THE YOUNG IN DXCC

And congratulations also to 8 year-old William Ferguson, KJ4EYZ. This after formally being presented his DXCC certificate at a Virginia DX Century Club meeting on March 16th.by the club's Vice President, Ron Young, W8RJL.

Bill Moore, NC1L, is the ARRL's Awards Branch Manager. He says that William's achievement makes him the youngest full member of the Virginia DXCC, and one of the youngest members of the DX Century Club.

William is the son of Rich Ferguson,, N2XQM. His 10-year old sister Carissa, KJ4EZA, already has 82 countries worked. (Southgate)

**

NAMES IN THE NEWS: KF4KWW REDESIGNS 2010 YHOTY NOMINATING FPRM

And a big thank-you to Dave Crawford, KF4KWW, who maintains the Dayton Hamvention website. Dave recently offered to redesigned our 2010 YHOTY nominating form. Thanks to his effort, the form in Microsoft Word is now a download, fill in the blanks, and mail or e-mail back. Go to our website, www.arnewsline.org -- scroll down to the words "2010 Young Ham Of The Year Nominations Now Being Accepted," right click on the word "Here" and have a look at Dave's creativity. Then print it out, fill it in and nominate a worthy youngster in your area. (ARNewsline(tm))

EMERGING TECHNOLOGY: NEW FORMAT OF HARD DRIVE STORAGE COMING IN 2011

Hard drives are about to undergo one of the biggest format shifts in 30 years. Amateur Radio Newslines Norm Seeley, KI7UP, has more:

--

By early 2011 all magnetic hard drives will use an advanced format that changes how they go about saving the data people store on them. The move to the advanced format will make it easier for hard drive makers to produce bigger drives that use less power and are more reliable. However, it might also mean problems for Windows XP users who swap an old drive for one using the changed format.

According to Science On-Line, since the days of the original DOS operating system, the space on a hard drive has been formatted into blocks 512 bytes

in size based on the floppy disks of that era. Each 512 byte sector has a marker showing where it begins and an area dedicated to storing error correction codes. In addition a tiny gap has to be left between each sector.

While 512 bytes made sense hard drives were only a few megabytes in size, its of less significance when drives can hold a terabyte or more of data. As a result, in large drives this wasted space where data cannot be stored can take up a significant proportion of the drive.

Drive makers say that moving to an advanced format of 4 kilobyte sectors means about eight times less wasted space. This will allow drives to devote twice as much space per block to error correction technology.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

Through the International Disk Drive Equipment and Materials Association all hard drive makers have committed to adopting the 4 Kilobyte advanced format by the end of January 2011. These manufacturers same have begun an education and awareness campaign to let people know about the introduction of the news advanced format. Also, to warn about the problems it could cause for users of older operating systems such as Windows XP or ME. This is because Windows XP, ME, 2000 and the like were all released well before the new 4 kilobyte format was decided on. (Science OnLine)

HAM RADIO IN SPACE: AO-51 FM REPEATER TO BE DEDICATED TO SCOUT JAMBOREE

AMSAT North America will be supporting the Boy Scouts of America 100th Anniversary Jamboree. This, by dedicating an AO-51 VHF UHF FM repeater in space for the event.

From Friday April 16th, at 15:00 UTC until Sunday April 18th at 19:00 UTC, an AO-51 repeater will be allocated for Jamboree use. The frequencies used will be 145.880 MHz uplink, and 435.150 MHz downlink. The mode will be narrowband FM and no tone access will be required.

All regular AO-51 users are requested to give priority to Jamboree stations or QSO's with Jamboree stations.

AMSAT adds that it wishes the Scouts good luck operating via the AO-51 satellite for this milestone event and so do we. (AMSAT)

HAM HAPPENINGS: INTERNATIONAL LIGHTHOUSE AND LIGHTSHIP WEEKEND NOW PLANNING

A total of 100 registrations have been received so far at the website collecting entries for the 2010 International Lighthouse and Lightship weekend. The event is slated for the weekend of August 21st and the 22nd.

This will be the 11th annual outing of this event sponsored by Scotland's Ayr Radio Group and its station GM0AYR. The registrations to date are from 19 countries with nearly half of them from Germany and Australia who always strongly support this fun event. Other countries taking part include Argentina, Belgium, Chile, Denmark and England to name only a few.

To register or check out the lighthouses already registered, visit the official website at illw dot net on the World-Wide-Web (ILLW)

**

DX

In DX, two operations from Mauritius make the news this week. The first is by DL6UAA and operating as 3B8MM beginning on April 4th, The duration of his stay will be 3 weeks operating 160 through 10 meters mostly CW with some SSB and digital possible. QSL via DL6UAA, either direct or via the bureau.

And SP2JMB, will be active from Mauritius between April 7th through the 14th as 3B8SC/ His operation will be on all of thr High Frequency bands operating C-W only. QSL via his home callsign.

The Mongolian Radio Sport Federation has opened a QSL Bureau. Its address is MRSF QSL Bureau, PO Box 573, Ulaanbaatar 16092, Mongolia.

DL3OCH will be active from the Maldives as 8Q7QX through April 4th. Operation will be mainly on
40 through 12 meters mostly on CW and possibly some RTTY and PSK31, QSL via his home callsign.

Lastly, G0SGB will be active from Malta portable 9H3 between June 12th and the 25th. He will also be active from Gozo through no specific dates for this part of the operation has been announced. His activity will focus on lighthouse activation's. QSL via his home callsign, direct only.

(Above from various DX news sources)

**

THAT FINAL ITEM: 600 METERS ALIVE DOWN UNDER

And finally this week, an old Very Low Frequency transmitter has come back to life down-under thanks to the dedication of a group of ham radio operators. Jim Meachen, ZL2BHF, has the rest of the story:

--

The General User Radio Licence for Amateur Radio Operators detailed in the New Zealand Gazette of 18th February, and effective from the 1st of March, included the additional frequency range 505 - 515 KHz for New Zealand Amateur Radio Operators.

This new allocation was great news to the Suburban Amateur Radio Club Branch 86 NZART which is based at the Musick Memorial Radio Station at Bucklands Beach in Auckland. Established in 1942 the Musick Point radio

station with the callsign ZLD was formerly a base for the New Zealand Post Office aeronautical and maritime communications. Over the past decade or so members of the Suburban Amateur Radio Club have worked tirelessly restoring equipment associated with the 600 metre band to operating condition. I asked Ian Walker ZL1BFB the Chairman of Suburban Club what the new allocation would mean for the Club:

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

On Saturday 13th March the Suburban Amateur Radio Club held a special event to commemorate the introduction of 600 metres to the NZ Amateur Radio Bands. At zero hundred hours gmt former operator Ramon Chandler ZL1ARY threw the switch and ZL1ZLD was on the air on 512 KHz.

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

Since at this time not many New Zealand Amateurs have transmitting capability on 600 metres a call back frequency to ZL1ZLD was established 3686KHz. Operators said that it was rewarding to get a few call backs with acknowledged reception of ZL1ZLD's signal on 512KHz. Club Chairman Ian Walker ZL1BFB reflects on the occasion:

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

Indeed, restoration work at the station has been a project over many years and how rewarding it is for the Suburban Amateur Radio Club team to see the Dansk transmitter in service once again on 600 metres.

You can find more information on the Suburban Amateur Radio Club and the Music Memorial Radio Station ZL1ZLD under Northern Branches on the NZART Web page.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF.

--

You can find more details on the Suburban Amateur Radio Club and the Musick Memorial Radio Station ZL1ZLD at http://www.nzart.org.nz/branches/sarc/index.htm) (ZL2BHF)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

And less we forget, a speedy recovery to RAIN producer Hap Holly following back surgery and to Newsline's own Don Wilbanks AE5DW, and his wife Dawn on their recent weight loss surgery. We know that you join in wishing all three the very best.

For now, with Bill Pasternak, WA6ITF, at the editors desk -- who is also planning weight loss surgery, -- I'm Fred Vobbe, W8HDU, saying 73 and we thank you for listening.

> the Red Cross and the Salvation Army.

The current Administration operates on the worldview that Government
knows best. You may ultimately get your wish by means of the Federal
Government subsuming private relief organizations like RC and SA.

Another widely held misconception. While lead melts around
650 F, it doesn't boil (vaporize) until at least 1400 F.

What you're smelling is the rosin flux. And yes, that stuff
ain't healthy for you. (See UK Safety bulletin:)

What you do have to look out for, with regard to the lead, is
washing your hands before you eat after working with solder.

SB QST @ ARL $ARLB012 ARLB012 ARRL, Red Cross Sign Memorandum of Understanding

ZCZC AG12 QST de W1AW ARRL Bulletin 12 ARLB012
>From ARRL Headquarters
Newington CT March 30, 2010 To all radio amateurs

SB QST ARL ARLB012 ARLB012 ARRL, Red Cross Sign Memorandum of Understanding

On Thursday, March 25, ARRL President Kay Craigie, N3KN, signed a new Memorandum of Understanding (MoU) with the American Red Cross (ARC) at ARC National Headquarters in Washington, DC. The MoU, which replaces an earlier Statement of Understanding that expired in 2007, provides a "broad framework for cooperation" between the ARRL and the ARC "in preparing for and responding to disaster relief situations at all levels in rendering assistance and service to victims of disaster, as well as other services for which cooperation may be mutually beneficial."

The ARRL Board of Directors approved the signing of the MoU at its January 2010 meeting following the completion of negotiations. The Red Cross requires the completion of a criminal background check to participate in Red Cross activities and provides a process by which a volunteer may have a criminal background check performed at no cost to the volunteer.

In the case of ARRL volunteers, the Red Cross has agreed to accept an alternative process: ARRL volunteers may arrange, at their own initiative and expense, to have the criminal background check performed by a state or local law enforcement agency.

The Red Cross also has agreed that ARRL volunteers shall not be asked or required to consent to credit checks, mode of living investigations or investigative consumer reports in order to provide a communications function.

The ARRL and the Red Cross encourage interested volunteers in their respective organizations to become members and to participate in the activities of the other organization. ARRL volunteers should be aware that if they wish to become Red Cross volunteers, they may be required to consent to additional background checks in accordance with Red Cross policy that may include credit checks, mode of living investigations or investigative consumer reports.

Per the MoU, "both ARRL volunteers and ARC workers will work cooperatively at the scene of a disaster and in the disaster recovery,

within the scope of their respective roles and duties as recommended."

During a Red Cross Disaster Relief Operation (DRO) and depending on their training and qualifications, ARRL volunteers may perform in one or more of several roles, including Amateur Radio Liaison, Communication Equipment Operator, Communication Equipment Installation/Repair and Disaster Assessment. ARRL volunteers who are assigned roles by the Red Cross during a DRO will be provided with Red Cross credentials as required by the role, consistent with Red Cross policy.

"Because of the importance of emergency communications, we are happy to be able to continue the League's long-standing relationship with the American Red Cross," said ARRL President Kay Craigie, N3KN. "The ARC and other served agencies give Amateur Radio operators the worthwhile missions in our communities that allow us to thank America for the privilege of being hams."NNNN/EX

==> PUBLIC SERVICE: ARRL SIGNS MEMORANDUM OF UNDERSTANDING WITH
AMERICAN RED CROSS

On Thursday, March 25 ARRL President Kay Craigie, N3KN, signed a new
Memorandum of Understanding (MoU
<http://www.arrl.org/news/files/ARRL-ARC_MoU.pdf>) with the American
Red Cross (ARC <http://www.redcross.org/>) at ARC National Headquarters
in Washington, DC. The MoU, which replaces an earlier Statement of
Understanding that expired in 2007, provides a "broad framework for
cooperation" between the ARRL and the ARC "in preparing for and
responding to disaster relief situations at all levels in rendering
assistance and service to victims of disaster, as well as other
services for which cooperation may be mutually beneficial." Read more
here <http://www.arrl.org/news/stories/2010/03/30/11412/?nc=1>.

==> PUBLIC SERVICE: AMATEUR RADIO ASSISTS WITH RESCUE IN GREAT SMOKY
MOUNTAINS

On Sunday, March 28 -- a day with a lot of rain, wind, sleet and,
fog -- John Oakberg, NK4N, of Sevierville, Tennessee, went out hiking
in the Great Smoky Mountains National Park near Mt LeConte. When he was
```

about 1 mile up from Alum Cave Bluff, he came across Judy Potter, 57, of Atlanta who had broken her ankle while on the trail. Oakberg reached for his cell phone to call 911, but there was no coverage available. He then reached for his handheld transceiver and put out a call to any Amateur Radio operators who may be listening via some nearby VHF 2 meter repeaters. Read more here <http://www.arrl.org/news/stories/2010/03/30/11411/?nc=1>.

==> NEW ARRL WEB SITE UNDERGOES FURTHER TESTING BEFORE LAUNCH

According to ARRL Chief Operating Officer, Harold Kramer, WJ1B, we are currently finishing the final pre-launch adjustments and testing the new ARRL Web site and plan to launch it by April 12. "This launch has been a longer than anticipated process for all of us," Kramer said, "but we have learned a lot during the past two years as we conducted research about what people want from the ARRL Web site. We created a new architecture and navigation scheme to meet those needs and we implemented a contemporary new design. After that, we updated our current Web content and created lots of brand new content, including multimedia. We then began integrating the incredibly complicated functionality, e-commerce, advertising and database connections from the current Web to the new Web site. It has been a lot of work, and while it is disappointing that we are not out the door quite yet, we are now in the home stretch. When the new ARRL Web site debuts, we just want to be sure that it looks great, works well in meeting the needs of our members and that it is something that we can all be proud of."

==> AMATEUR RADIO IN THE CLASSROOM : 2010 ARRL TEACHERS INSTITUTE BEGINS WITH A BANG IN TUCSON

The ARRL Teachers Institute on Wireless Technology (TI) began its 2010 sessions in February with a TI course designed specifically for teachers in the Tucson (Arizona) Unified School District (TUSD). Taught at Jefferson Park Elementary School, 21 educators -- including the school principal, school counselor and three resource personnel -- took part in five Saturday sessions, working through an expanded 45 hour Teachers Institute (TIs usually are done in about 32 hours). The teachers completed homework assignments that included building the clock kit, building a flashing LED Santa and reading the first two chapters of What's a Microcontroller? In addition, five parents attended the TI as observers. The course was taught by TI Instructor Miguel Enriquez, KD7RPP, who teaches in the TUSD. Read more here <http://www.arrl.org/news/stories/2010/03/31/11413/?nc=1>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including signing a new Memorandum of Understanding with the American Red Cross, preparing for WRC-12, legislative actions, holding workshops to help teachers introduce wireless technology in their classrooms, promoting on-the-air events,

investigating power line noise and more. This installment covers the month of March. Read more here <http://www.arrl.org/news/features/2010/04/01/11415/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Be sure to get your comments in by Monday, April 5. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> SOLAR UPDATE

Tad "The uncertain glory of an April day, which now shows all the beauty of the Sun <http://shakespeare.mit.edu/two_gentlemen/two_gentlemen.1.3.html>" Cook, K7RA, reports: Last week's bulletin <http://www.arrl.org/news/stories/2010/03/26/11408/?nc=1> said new sunspot group 1057 appeared March 23, but it was actually short-lived group 1056 according to summaries <http://www.swpc.noaa.gov/ftpmenu/forecasts/SRS.html>. Group 1057 emerged on March 24, and on March 25 1056 became a plage <http://en.wikipedia.org/wiki/Plage_29> without spots.
Sunspot group 1058 arrived March 26, but was gone two days later when 1059 emerged. Group 1059 has not become as large as 1057. From March 28-April 1, the size in millionths of the Sun's surface was 120, 100, 150, 130 and 70. But the size of 1057 from March 24-April 1 was 5, 240, 400, 320, 380, 410, 290, 260 and 250. Group 1059 is surely fading, but 1057 may be holding steady, even though it is down from peaks of 400 and 410 on March 26 and 29. The average daily sunspot numbers for the week were up more than 4 points to 28.9, and the average daily solar flux changed from 84.2 to 84.9. The renewed sunspot activity seems constant and steady. We have new 3-month moving averages of daily sunspot numbers through the end of March, which is centered on February, and the number has increased a few points from last time. The 3-month moving average of daily sunspot numbers centered on July 2009-February 2010 was 4, 4, 4.6, 7.1, 10.2, 15.2, 22.4 and 25.7. The rate of increase has slackened, but it steadily moves higher. Look for more information on the ARRL Web site on Friday, April 2, where Tad will have a bit more about the numbers, a visit to NWRA -- the home of the Effective Sunspot Numbers -- and reports on recent conditions. For

more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by William Shakespeare's Two Gentlemen of Verona <http://shakespeare.mit.edu/two_gentlemen/two_gentlemen.1.3.html> (Act I, Scene 3).

==> THIS WEEK ON THE RADIO

This week, the Lighthouse Spring Lites QSO Party is April 1-11. The QRP ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest are April 3-4. The Missouri QSO Party is April 3-5 and the Low Power Spring Sprint is April 5. Next week, look for the Montana QSO Party on April 9-11. The Japan International DX Contest, the QCWA Spring QSO and the Georgia QSO Party are April 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL RECOGNIZES: RUDY SEVERNS, N6LF, WINS MARCH QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for March is Rudy Severns, N6LF, for his article "An Experimental Look at Ground Systems for HF Verticals." Congratulations Rudy! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the April issue by Friday, April 30.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

298. Straight key speed

Newsgroup: rec.radio.amateur.moderated
Date: 2010-04-02 00:41:54 UTC
From: notbob <notbob@nothome.com>
Message-ID: <ly4tn.1751$vC3.588@newsfe04.iad>
Source record: 1420

I'm a retired geezer studying for my technical license. I fully intend to learn morse code and not at a mere 5wpm. I figure one is not truly a ham until one can cw, so I'm hot on it, listening to the Koch method to learn code. I'm also looking for a GOOD straight key.

I want to invest in quality, but am not wealthy. I was gonna buy a Vibroplex Know Code key, but the reviews are less than heartening. So, I talked to Al at Milestone Technologies and he said something that kinda set me back on my heels. He claimed a straight key is not much good for anything over 15 wpm. Yikes!

Am I unnecessarily knocking myself out trying to learn code at Just Learn Code's default 20wpm? Dropping down to 15wpm sure would speed up the learning curve. If I want to eventually make 20wpm and faster, would I be better off with a less expensive straight key in the beginning and later investing the money in a quality bug? I want to go bug before paddles and keyers. I guess the bottom line is, do I want to graduate to a bug as soon as possible and maybe lower my initial goals for a straight key. IOW, just get on the air? ;)

Any advice is appreciated.

Amateur Radio Newsline(tm) Report 1703 - April 1 2010

Amateur Radio Newsline report number 1703 with a release date of
Thursday, April 1st, 2010 to follow in 5-4-3-2-1.

The following is a QST. The ARRL and the American Red Cross finally
sign a new Memorandum of Understanding. What might this mean to those
of you involved in rescue radio? Also, a crossband repeater will be
launched into space in November, a bill to have engineers as advisors
to the FCC Commissioners moves forward and a message to families with
a member who is a ham: There is hope! Find out the details on Amateur
Radio Newsline(tm) report number 1703 coming your way right now.

RESCUE RADIO: ARRL AND RED CROSS SIGN NEW MOU

Its going to be business as usual between the American Red Cross and
the American Radio Relay League. This as the two sign a new
Memorandum of Understanding to continue their joint public service and
humanitarian work. Mark Abramowicz, NT3V, is at our North-East Bureau
with the details:

--

The signing of this new Memorandum of Understanding by the ARRL's President
Kay Craigie, N3KN, completes a process whose intent was to preserve the
role of amateur radio in Red Cross operations without ARRL volunteers being
subjected to what some felt were intrusive background checks by an
independent company.

In a statement accompanying the March 25 signature on the document, Craigie
noted: "Because of the importance of emergency communications, we are happy
to be able to continue the League's long-standing relationship with the
American Red Cross."

But nearly four years ago, when this issue rose to a boil among amateurs
who worked with the Red Cross, it was anything but assured that the ARRL
would be seeing an easy resolution to this situation.

In 2006, the American Red Cross began requiring all of its volunteers to
submit to a criminal background check by an independent organization it had
hired called MyBackgroundCheck.com.

Those who went to the company's website also found that MBC was requiring consent for a credit check and mode-of-living investigation.

Essentially, the company wanted to gather a broad range of personal information that would go to "character, general reputation (and) personal characteristics."

MBC clearly stated on its website at the time that the background check would be "all-encompassing."

In an October 2006 advisory, ARRL President Joel Harrison W5ZN, suggested ARRL members become aware of what they were allowing MBC to gather.

And, while the American Red Cross assured ARRL at the time that it was strictly interested only in the criminal background check, its contractor - MBC - still had the right to gather the other information on an applicant's background.

That sparked invasion of privacy concerns and a whole host of other issues and some communications volunteers walked away.

The compromise hammered out in the new Memorandum of Understanding allows ARRL radio volunteers to arrange at their own expense a criminal background check performed by a state or local police agency.

The Red Cross also agrees under the memorandum that ARRL volunteers won't be asked or required to submit to credit checks or any kind of investigative consumer reports or lifestyle investigations.

The memorandum stipulates that ARRL and Red Cross volunteers will cooperate at disaster scenes and allows for ARRL volunteers to perform such roles as amateur radio liaison, communication equipment operator, communication equipment installation and repair technician and even take part in disaster assessment.

And, the Red Cross agreed that during a Red Cross Disaster Relief Operation, Red Cross credentials will be provided to ARRL volunteers as required and consistent with Red Cross policy.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Hopefully, this new Memorandum of Understanding will allay the fears of those hams who objected to the Red Cross using an outside contractor to do background checks on those who want to volunteer. (ARRL)

RESCUE RADIO: HAMS BECOME THE EARS OF 911 IN LINCOLN NB. AS TELECOM SWITCHING FAILS

I'm Bill Pasternak, WA6ITF, with breaking news:
--

K0NEB: "I'm at 48th and Cornhusker right now in Lincoln, Nebraska, and we are on the major intersections in Lincoln in case somebody needs to call 911 for any kind of emergency."

--

That's Joe Eisenberg, K0NEB, who is just one of a large number of Lincoln, Nebraska area hams who are stationed all across the city. This, after a major failure of telecommunications provider Windstream's switching system wreaked havoc on phone service in Lincoln and across much of Southeast Nebraska on Thursday, April 1st. The outage that began at about 7 a.m. Central time disabled 911 from both dial up and cellular service in several communities including the city of Lincoln.

According to the latest news reports, by early afternoon, landline service in Lancaster County had been restored but cellular service into 911 still was not operating. As a result, an unknown number of hams are still at major area intersections. They are primarily using the Lincoln 146.76 MHz repeater to relay emergency messages to authorities. How long they will be out there as 911 back-up is not known as we go to air.

More on this next week. Jim. (ARNewsline(tm))

**

HAM RADIO IN SPACE: CROSSBAND REPEATER IN SPACE TO LAUNCH IN NOVEMBER

A true crossband repeater should be on-orbit by years end. This with word that three small research satellites with amateur radio educational payloads are scheduled for launch in late November with one being billed as a true crossband relay device.

The new CubeSats come from Montana State University, the University of Colorado and Kentucky Space as part of NASA's Educational Launch of Nanosatellite mission. And it's the one from Kentucky that's of interest
to the ham in the street.

KySat-1 is believed to be the first ever CubeSat to carry a 2 meter-to-70 cm FM transponder. This will make it a true crossband repeater in space and one that should be accessible by most radio amateurs within its flight path.

For those not aware, CubeSats are in a class of small research spacecraft called pico-satellites. They have a volume of about one quart and weigh no more than 2.2 pounds. The University of Florida was selected as an alternate in case one of the three primary spacecraft cannot fly. (ANS)

**

RADIO POLITICS: IARU REGION TO MEET IN EL SALVADOR

The 17th session of the International Amateur Radio Union Region 2 General Assembly will take place from October 4th to the 8th in El Salvador. This meeting will be hosted by the Club de Radio Aficionados de El

Salvador. Matters to be discussed include the promotion and defense of amateur radio, High Frequency band plans along with other issues of importance to member societies within the region. More information is available on line at http://elsalvador2010.org/en/ (Southgate)

**

RESCUE RADIO: FCC GRANTS 97.113 WAIVER TO LA SHERIFF DEPT FOR TWO EXERCISES

The waivers to section 97 dot 113 of the Amateur Service Rules to permit various entities to use employee hams in emergency training exercises continue to be granted. The latest is to the Los Angeles County Sheriff's Department in California that requested a permit for certain amateur radio licensees to transmit communications on behalf of their employer during upcoming government emergency drills.

The venue for this drill are two medical centers operated by Providence Little Company of Mary. The purpose of the exercises is to demonstrate reliable equipment operation and operator proficiency as a means of back-up communications between and among hospital facilities, law enforcement agencies, and emergency operations centers. This, in the event that normal communications channels are unavailable.

An exercise with emphasis on Providence's Torrance, California, facility will take place on April 22nd. Another with emphasis on Providence's San Pedro facility will take place on June 17th. In total the drills involve 17 hams employed at the two facilities. Participants for the Sheriff's Department will be non-employee volunteers, who do not require a waiver.

In granting the request, the FCC says that the waiver to Section 97 dot 113 of the Amateur Service Rules is warranted in the public interest under the circumstances requested. (FCC)

**

RESCUE RADIO: FCC GRANTS KC 97.113 WAIVER REQUEST IN KANSAS CITY

The FCC has also issued a Part 97.113 waiver to Wyandotte County KCK Emergency Management of Kansas City, Kansas. This also to permit certain Amateur Radio Service licensees to transmit communications on behalf of their employer during an upcoming government emergency drill.

In his March 23 request, Larry Eker who is the Program Coordinator of Homeland Security for Wyandotte County Emergency Management told the FCC that the County will be participating in a Kansas City Metro Mass Causality Incident Exercise titled Perfect Storm. That it is to take place on April 7th from 8:00 a.m. to 5:00 p.m. at several locations in Platte County, Missouri, and Wyandotte and Johnson Counties, Kansas.

Scot Stone is the Deputy Chief of the Mobility Division of the FCC's Wireless Telecommunications Bureau. He said that in granting the waiver for the dozen requested government employed hams to take part, that granting of the waiver request is appropriate under the circumstances presented. This because the public interest is served in facilitating the

April 7th public safety exercise and by permitting the amateur licensees to take part. (FCC)

RESCUE RADIO: HIKING HAM BECOMES FIRST RESPONDER

A ham radio operator truly became a first responder on Sunday morning March 28th. It happened when John Oakberg, NK4N, was hiking in the Great Smokey Mountains National Park near Mount LaConte. That's where he came across a 57 year old female hiker who has sprained or broken her left ankle and leaving her unable to walk back down off the hill.

Oakberg and several others in the woman's hiking party first tried cellular phones to summon assistance but there was no service available where they were. But NK4N had with him a hand held transceiver with which he was able to put out a call for assistance over several local repeaters. As Oakberg's signal was noisy into all of the repeaters but two other hams identified as Dean Webb, N4NLT, operating mobile and Cleve Hayes, KB4UAL, at his home who could hear NK4N direct. They assisted in relaying data to Scott Wyrick, KD4CWB. After obtaining the necessary information KD4CWB called the National Park Service dispatcher, relayed the facts and requested a rescue team to be dispatched.

It took a few hours but rescuers were finally able to reach the victim and successfully carry her to safety. Paramedics treated her on the scene but she refused transport via ambulance and left the area in a private vehicle. Reportedly her hiking group took her to the Sevier County Medical Center for additional treatment. (KD4CWB)

**

RESCUE RADIO: HAMS TAKE PART IN SIMULATED TSUNAMI DRILL

Amateur radio was part of an simulated tsunami emergency training exercise along the Northern California coastline held on March 24th. Timothy Hanna, WB9JNS, a member of the Mendocino County Amateur Radio Communications Service, was one of over a dozen hams that participated in a portion of the test involving the use of amateur radio.

Through the use of ham radio channels, the Mendocino County Amateur Radio Communications Service was able to have contact with an emergency operations center in Eureka. The message Hanna and his associates sent was a simulated report of conditions in Mendocino County.

Hanna told the Ukiah Daily Journal that in all, hams demonstrated at least four separate methods of getting in contact with Humboldt County. A total of 13 licensed Ham radio operators involved in the training exercise. (Ukiah Daily Journal)

**

RADIO LAW: BILL TO ADD ENGINEERS TO COMMISSION MOVES ON

A bill that would allow each FCC commissioner to add an electrical engineer or computer scientist to his or her staff has been approved by the Senate Commerce Committee.

Called the FCC Commissioners' Technical Resource Enhancement Act, the proposed legislation says that the new technical staffers would provide the commissioners with technical consultation when appropriate. They would also interface with the Office of Engineering and Technology, commission bureaus, and other technical staff of the commission for additional technical input and resources.

As previously reported, the bi-partisan bill was co-sponsored by Senators Olympia Snowe and Mark Warner. A similar was introduced in the House by Representative Jerry McNerney earlier and has been referred to the House Commerce Committee. (Adapted from Radio Ink)

**

ELECTRONICS DISPOSAL: CEA SETS UP RECYCLING WEBSITE

With the digital television transition now almost a year old and new flat panel sets selling as fast as they can be manufactured, the Consumer Electronics Association has commented on an aspect of the transition that hasn't been too widely discussed. That being what to do with all those old
analog television receivers.

In its well publicized remarks, the Association is urging consumers to take advantage of the many ways to safely dispose of used analog TV sets. It noted that it offers a list of manufacturer and retailer electronics recycling programs as well as a searchable database of electronics recyclers by Zip code on its web site.

The Association also says that many consumers are unaware of other local options for recycling unused consumer electronics products. It emphasizes that its website site lets consumers access ways to find electronics recycling opportunities in their area and other information as well. The Consumer Electronics Association's electronics recycling website is located in cyberspace at www.mygreenelectronics.org. (RW)

**

HAM HAPPENINGS: RAIN DROPS TELEPHONE DIAL IN SERVICE

RAIN, the Radio Amateur Information Network produced by Hap Holly, KC9RP, has discontinued its dial-up outgoing programming service effective April

1st and will only be available over the World Wide Web. This, due to a lack of activity on the phone line that has been provided to Hap by Uddle Systems.

As with most ham radio audio providers, RAIN has found that the majority of its listeners prefer the quality of downloadable audio over the Internet to the relatively constricted trait obtainable over a normal telephone. So it is shifting its entire emphasis to digital distribution from its website at www.therainreport.com. There you can find the latest programming provided by KC9RP along with files and podcasts from the last three years.

And less we forget, Hap had his back surgery and his recovery is progressing well. Once out of the hospital he will be in rehab for several weeks. During this period, RAIN listeners will be treated to highlights of shows from the past. Get well wishes can be sent by e-mail to hap at the rainreport dot com or by regular mail to his callbook address. (RAIN)

HAMVENTION 2010: K4SV TO SPEAK AT SWODXA DAYTON DX DINNER

The SouthWest Ohio DX Association has announced that their speaker for their 25th annual DX Dinner on May 14th, will be Dave Anderson, K4SV. The DX Dinner is held annually in conjunction with the Dayton Hamvention, this year at the Crowne Plaza Hotel, Dayton, Ohio. Door prizes include an Icom IC7600 transceiver and an Alpha 8410 amplifier. More is on-line at www.swodxa.org (SWODXA)

**

HAMVENTION 2010: PANEL ALMOST COMPLETE FOR 2010 HAM RADIO TOWN MEETING

The panel is now almost complete for this years Amateur Radio Town Meeting to be held on Saturday, May 15th at the 2010 Dayton Hamvention. This years Town Meeting is titled "Amateur Radio As A Way To Find Or Keep A Job In Today's Shrinking Job Market", and in reality it will be a job advisory

fair of sorts. One where people who have built their careers in part or in total because of being radio amateurs will share their experiences with you.

This year brings some new names to the long running Town Meeting panel. Among them is Diana Eng, KA2UHB. Diana is a New York City based fashion designer who integrates electronics into many of her of her designs. A former Project Runway contestant, KA2UHB also produces and hosts on-line videos explaining the various aspects of electronics, communications and ham radio.

From the ARRL comes Allen Pitts, W1AGP who is the League's Media Realizations specialist. Simply said, his job background will amaze and astound you. Allen has truly been there and done that. Now he will share his knowledge with all of you.

And we will also have a presenter who can answer the question of what to do when you are nearing retirement and the company you have spent most of your lifetime working for suddenly folds. So there you are without a job or a pension to fall back on. That's what happened to Bob Sherman, K2SJP, but thanks to being a ham radio operator since his teen years a new career in the same industry was not that far away.

They, along with returning speakers that include Heil Sound's Bob Heil, K9EID, ABC television's Steve Mendelsohn, W2ML, and Rich Moseson, W2VU of CQ Magazine will make up the panel of experts.

As usual we will be in Meting Room 2 from 11:45 a.m. to 2 p.m. at the Hara Arena on Saturday, May 15th. If you are at Hamvention 2010, please join us. We will not have all the answers, but hopefully we will at least be able to give you some general guidance in gaining employment or keeping a job you now have. (ARNewsline(tm))

EMERGING TECHNOLOGY: WORLDS SMALLEST SUPERCONDUCTOR REVEALED

Science Daily reports that researchers have discovered the world's smallest superconductor. This, in a sheet of four pairs of molecules less than one nanometer wide. On March 29th, the Ohio University led study, published as an advance online of its findings in the journal Nature Nanotechnology. It provides the first evidence that nanoscale molecular superconducting wires can be fabricated. These it says could be used for nanoscale electronic devices and energy applications. The study also is

noteworthy for providing evidence that superconducting organic salts can grow on a substrate material. You can find out more at www.sciencedaily.com/releases/2010/03/100329112151.htm (Science Daily)

**

WORLDBEAT: RADIO SWEDEN TO END MW AND SW BROADCASTS

Radio Sweden will end its medium and short wave broadcasts on October 31st. This, in favor of web services that the broadcaster believes to be the best use of resources and in line with international trends.

According to a news release the English-language service is to continue on the web and on national over the air broadcasts. The Russian transmissions will be available only on the web, as is the German service is now. (Worldwire)

**

WORLDBEAT: NEW VIDEO OF THE RADIO DOCUMENTATION CENTER IN VIENNA

A visit to radios golden past is now available on-line. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the story of the journey:

--

Jonathan Marks, G8WGN, the former host of Radio Netherlands Media Network has made available a video of his visit to the Radio Documentation Center in Vienna, Austria. That's the home to millions of QSL cards, magazines and other radio related documents.

Marks says that he was there in September of 2009 that his colleague and friend Wolf Harranth, OE1WHC. Harranth showed Marks around the world's largest collection of radio related documents that contains artifacts from both from the broadcast and amateur radio world. OE1WHC also shared a bit of his own philosophy as to the reason for the archive:

--

OE1WHC: "Its always great fun to listen to the radio and to transmit yourself . To listen to amateur radio. Communications is fun; sometimes its sad but its sad fun at that time."

--

Marks notes that there are millions of QSL cards, magazines, books and unique government records that tell the story of communication across international borders. He adds that the center survives on help from volunteers and he hope that his video will help to explain why they are so passionate about preserving the golden age of international radio.

For the Amateur Radio Newsline. Im Fred Vobbe, W8HDU.

--

The video that was shot in High Definition. Part 1 of this is on line at http://vimeo.com/10320815. Marks says that Part 2 will follow shortly. More information in both English and German at http://dokufunk.org. (Southgate)

**

WORLDBEAT: NEW MORE ISLAND IS NO MORE ISLAND

If you are thinking of sponsoring a DXpedition to New Moore Island in the Sunderbans you might as well forget it. This is because the disputed island in Bay of Bengal has disappeared into sea.

For nearly 30 years Bangladesh and India have argued over ownership of a tiny rock island in the Bay of Bengal. Now Mother Nature has resolved the dispute for them. Due to rising sea levels, as of March 24th the island's gone.

According to news reports, its disappearance below the waves has been confirmed by satellite imagery and sea patrols and one might now say that New Moore Island is, no more. (Published news reports)

**

DX

In other D-X, the long hoped for Jan Mayen DXpedition is now set for July 4th to the 16th of 2011 and will be lead by SQ8X. He and his group of operators plan to be on the air for 10 to 12 days with 2 to 3 stations. More details will be forthcoming later this year.

F4EGZ, is active portable FR from Reunion Island. He will be there through April 19th operating 20 through 6 meters. He will accept 6 meter skeds via E-mail at f4egz (at) yahoo (dot) fr. Please QSL via his home callsign.

Six female operators will be on the air as OX6YL from the western edge of Greenland between September 16 and the 20th. Activity will be on the HF bands using CW and SSB. A Web site for this operation is currently under construction at www.qsl.net/la6rha/greenland

According to a report from the South African Radio League, its again been noticed that some operators in IARU Region 1 have been operating outside the allocation of the 160 meter band. The low frequency limit in Region 1 is 1810 kHz. This makes it illegal to work stations in IARU Regions 2 and 3 who are operating below that frequency.

A DXpedition to Mozambique is now slated for October which will include a scouting Jamboree on the Air or JOTA operation from the capital Maputu. The group also plans to operate the CQ World Wide SSB contest from the city of Xai Xai. For more information on the DXpedition check out the web pages at www.3da0ss.net

Lastly, V73NS who is just finishing up his operation from Kwajalein will be deploying to Afghanistan
at the end of April. Neil told the OPDX newsletter that once there, he

will have his radio sent to him. He says that he plans to operate QRP CW only. QSLs for his V73NS operation should be sent direct via W3HNK.

(Above from various DX news sources)

**

THAT FINAL ITEM: STUDY INDICATES HAMS CAN BE SAVED FROM HAM RADIO

And finally this week, some good news from the world of science for the families of hams. There is hope for recovery! Recovery from what you ask? Newsline roving correspondent Pierre Pullinmyleg is here with the answer in his annual, April 1st report:

--

Researchers at zee American Museum of Natural History have found evidence zat evolutionary adaptations of cave-dwelling scorpions in Mexico are reversible as zee creatures move closer to sunlit areas. Writing in zee April issue of the science journal Cladistics, the museum's Lorenzo Prendini, Associate Curator for Invertebrate Zoology, says zat "three more generalized scorpion species living closer to za surface evolved from specialized ancestors living in caves deep below zee surface."

Zis discovery gives new hope to zee families of hams who spend most of zeir lives in dimly-lit basements and attics, and who have developed adaptations to survive in zeese environments, such as extra stores of body fat for sustenance during lengthy periods of confinement and reduced olfactory function.

Zee only potential problem, according to scientists, is zat zeese changes may not be reversible in a single generation. In za scorpions zat were studied, for example, it is believed xat ze reverse evolution has occurred over a period of some 65 million years.

From a cave somewhere in eastern Mexico, zis is Pierre Pullinmyleg reporting for Newsline.

--

Thanks Pierre. You may have made the relatives of ham radio operators feel truly good. Then again, maybe not. (Source: The Pierre Pullinmyleg Foundation for April 1st Reportage')

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin

Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, we thank you for listening and a truly happy April Fools Day 2010 to all.

There are lots of good straight keys out there. I've used a WW2 surplus J-37 since before I became a Novice in 1967. For my first 7 years as a ham it was the only key I had.

> He claimed a straight key is not much
> good for anything over 15 wpm. Yikes!

I can do more than 20 wpm on one, even today. That's about top speed for most people.

What a straight key did for me was to help me learn timing. When I got a bug in 1974 it was an easy transition.

> Am I unnecessarily knocking myself out trying to
> learn code at Just
> Learn Code's default 20wpm?
> Dropping down to 15wpm sure would speed
> up the learning curve.

Most people learn best using a combination of the Koch and Farnsworth methods.

Koch is studying two letters until you know them 90-95%, adding a third, studying those three until you know them, adding a fourth, etc.

Farnsworth is having the code sent with the characters fast but exaggerated spaces between letters so you have more reaction time - then reducing the exaggerated spaces.

> If I want to eventually
> make 20wpm and faster,
> would I be better off with a less
> expensive straight key in the
> beginning and later investing
> the money in a quality bug?

Yes. A decent straight key need not cost the earth.

> I want
> to go bug before paddles and keyers.

Then you need to get really good on a straight key (IMHO) because a bug is not as forgiving as an electronic keyer.

> I guess the bottom line is, do I
> want to graduate to a bug as soon as possible
> and maybe lower my
> initial goals for a straight key. IOW, just get on the air? ;)

Yes.

Speed is not the only Morse Code skill, in fact it's not even the most important.

> Any advice is appreciated.

Here are 12 steps to learning Morse Code:

1) Realize that Morse Code is a whole set of skills and they take a while to learn. They cannot be learned by reading a book, watching a video, or participating in online forums. They can only be learned by doing.

2) Set up a place to study code. A good solid desk or table with no distractions, lots of room to write, good lighting, good chair. Source(s) of code (computer, HF receiver, tapes, etc.), key and oscillator. Headphones are a good idea. I recommend starting out with a straight key. It needs a good solid base and needs to be adjusted properly.

3) Stay away from gimmicks like CodeQuick. Stay away from printed charts with dots and dashes on them. Morse Code is sounds, not printing on a chart or little phrases. Learning to receive consists of nothing more than learning to associate a certain sound pattern with a certain letter or number. There are only about 41 of them to learn.

4) Set aside at least a half-hour EVERY DAY for code practice. Can be a couple of ten- or fifteen minute sessions, but they should add up to at least a half hour every day. That means every single day, not just weekends, holidays, etc. If you can do more than a half-hour some days, great! Do it! But more on one day does not give you an excuse for the next day.

5) If you can enlist a buddy to learn the code with, or find a class, do it! But do NOT use the class or the buddy as an excuse to miss practice or slow down your learning.

6) Download and read "The Art And Skill of Radiotelegraphy". It's free and available from several websites. Search out other code-oriented websites, articles, etc. and read what they have to say. But always remember they're not a substitute for practice.

7) Practice both sending and receiving each and every day. A few minutes sending is plenty, most of the time should be spent receiving, but the two help each other. Practice receiving by writing it down. Copying "in your head" comes later. I find a pencil and block printing works best for me.

8) A combination of the Koch method and Farnsworth spacing is probably optimum for most people. Read up on them, understand and use them ï¿½ but remember they are tools, not magic.

9) Discontinue ANYTHING that impairs your ability to concentrate, focus, and learn new stuff. Only doctor-prescribed medications are exempt from this rule. Eat right, get enough sleep and enough physical exercise.

10) Put away your microphones, stay off the voice radios - all of them. Besides the automated code generators, listen to hams actually using code on the air. Copy down what they send. Learn how hams actually use code. When you get to the point where you can send and receive code, even slowly, get on the air and start making QSOs. Remember that you are learning code to be an operator, not pass a test, and that means you need the whole skill set..

11) If your HF rig doesn't have a sharp filter (400-500 Hz), get one and install it. Read the manual about how to use the rig on CW. Best operation usually requires turning off the AGC, turning the RF gain down and the AF gain up. The S-meter and AGC won't work under those conditions but that's no big loss; theyï¿½re not essentials.

12) Keep at it. There may be times when it seems as if you are making no progress, and times when you make rapid progress. What matters is that you keep practicing every day.

A bit of work, but well worth it IMHO, because all those steps make learning the code easier. And the work is trivial compared to what you can do with the skills once they're learned.

First, I recommend the Farnsworth method. In Farnsworth, the
individual characters are sent at high speed but are spaced out to
slow down the overall speed. I learned with the characters being sent
at 28 WPM but the overall speed at 15 WPM. That way, I learned to
recognize the characters at 26 and was able to speed up without
difficulty.

Regardless of the method you use, you are to be congratulated for
committing to learn the code at a decent speed.

Listen to code on the air in addition to your practice. There's lots
of CW on 40. Don't worry if it's too fast for you -- listen and copy,
even though you may get only 1 out of 5 characters -- it'll come to
you.

Don't get too cranked up about speed. I can copy around 26 WPM but
most of my CW is ragchewing on 40 at 18 WPM; rarely up to 20. In
fact, I recall reading somewhere recently that most CW operation is
around 18 WPM.

I use a keyer but from time to time switch to my straight key. I can rattle off 20 WPM on a straight key and may be able to go higher than that. I have never heard that 15 WPM was about all you can get out of a straight key.

Listen on 40 -- at the low end you'll find DX and speed demons. Above about 7030 you'll find normal people who work between 15 and 20 WPM.

If you really want to operate CW, you'll want a keyer with paddle, and, a straight key.

The bug is a fine device, lots of people still use them, but a bug is difficult to adjust and it has a steep learning curve. Get a straight key and learn the code. That way, you are learning only one thing at a time -- the code -- then, you can switch to a bug later on if you really want to.

Another option is to get a keyer that has built-in code practice. The better keyers will have practice routines that allow you to set the character speed and the overall speed. You can then use the keyer after you get on the air.

For many years, the old military J-38 was pretty much the standard straight key. If you can find one, go for it.
http://k6ix.net/J38Keys.html

Check out the Bencher RJ-1.
http://www.morsex.com/bencher/index.htm

The Nye Classic Oval Speed-X is a fine key. It's a copy of the J-38.
http://www.morsex.com/nye/index.htm

Friend of mine has one of these and loves it:
http://www.kent-engineers.com/HANDkeyINFO.htm

Some folks swear by the Russian Cherkassy keys. Note this guy's comment that he sends 25 WPM on a Cherkassy
http://www.aa5tb.com/keys.html

Whatever key you get, you'll want to mount it on a thin piece of something -- wood, plexiglas, etc. I have a Nye Classic Oval that I mounted on a 10-inch x 10-inch piece of plexiglass -- mount the key along the center of one edge so your wrist and forearm are resting on the plexiglas when you are sending.

If you look at the photos of the J-38 you'll see that the key has a small base. When you press down on the key, it wants to tip up -- that's why you want to mount it on a long base so the key remains stable.

Go to this website and scroll down to the photos of the J-37 -- note the long base that extends beyond the knob -- this keeps the key from tipping toward you when you are really pounding brass.
http://www.k5prt.com/equipment_keys.html

Here's one guy's collection:
http://sites.google.com/site/wb9lpu/straightkeynight

I recommend the Nye Oval Speed-X -- order it with the "Navy knob."

This one? http://vibroplex.com/know_code.html

I own the Standard version and I haven't had any issues with
it. What exactly were the faults with this?

> He claimed a straight key is not much good for anything over
> 15 wpm.

Well, yeah, although there are people that can do quite well
with a straight key at more than 20 wpm.

> If I want to eventually make 20wpm and faster, would I be

> and later investing the money in a quality bug?

My opinion: Learn to send proficiently and accurately with a
hand key first. There's a learning curve for a bug that takes
a bit of getting used to even with an already good fist.

By the way, you can use a bug as a straight key, using just the
"dash" motion. It's called a side swiper at that point.

> I guess the bottom line is, do I want to graduate to a bug as
> soon as possible and maybe lower my initial goals for a
> straight key. IOW, just get on the air? ;)

As I mentioned above, you can start with a bug and use it in the
side swiper mode, but you'll have to force yourself to avoid the
temptation tp try using in the semi-automatic mode until you gain
proficiency at using it as a straight key at lower speeds.

A lot of what you're asking is really personal preference.

I don't know that I'd say a straight key is worthless beyond 15wpm.
But IMHO it gets fatiuging (sp) pretty quickly for long operating
sessions at *any* speed. IMHO a bug is interesting, fun to use for
nostalgia's sake, just like making QSOs with an old tube-based radio.
But for work where the point is to communicate, IMHO a solid-state rig
-- and a paddle/keyer -- is the way to go.

But again, there's a LOT of personal preference in that paragraph.
Nobody's answer is absolutely correct.

I would not limit one's CW receive training speed based on what you can
send. There's absolutely nothing wrong with being able to receive
faster than you can send. (certainly much less of a problem than the
other way around!) Absolutely, I would listen to the individual
letters at 20wpm from the beginning. You *can't* think "dot, dash,
dot, OK, that's "R"" at that speed -- you have to immediately associate
that sound with a letter -- and that'll get you past the "10wpm hump".
You'll also start hearing some of the shorter -- and more common --
words as a single sound. Words like "and" and "the" etc...

I think I'd start with a decent paddle and keyer. Good paddles are,
I'm afraid, not cheap. (decent keyers are, since you can make one from
a simple PIC chip & some fairly simple software)

When I learned the code, back in high school in the 60's, my "elmer"
made a great suggestion.

When you're out and about, when you see a street sign or a billboard,
translate that into code (preferably "in your head" so as not to attract
undue attention). This was highly effective for me; it helped to develop
both sending and listening skills. I still find myself doing this from
time to time, and I still enjoy working CW.

When I was studying for my Novice we had a club member who was military trained.. We also had a military surplus code practice set

This device used paper tape, you could vary the speed with which the tape was pulled past a light sensor.. It also had a key input

Now if you pressed the key you got one tone, if the ink strip did the "Pressing" you got another tone and if you pressed the key at the precise moment the ink strip keyed the unit you got a 3rd tone (or at any time when the ink was keying it)

This guy was sending in step with the tape

There was only one tone (Indicating he was in perfect lock-step with the tape and that he was sending "Machine perfect" code)

It was pulling at 30 WPM

NB-

My favorite straight key is a WWII surplus J-38, mounted on a more stable base.

The Model J-37 is the same key without a shorting switch. This may be a better choice, because an accidentally shorted key can be a pain to troubleshoot!

When I took my Extra code test at an FCC office, there was only a straight key available for sending 20 WPM. If it is adjusted for the right amount of "bounce", you should be able to manage 20 or 25 WPM.

I waited until I had the Extra class license, before trying any kind of keyer. The one I have was built from a QST article, "The WB4VVF Accukeyer". It was fun to build and works with an "iambic" paddle.

The Accukeyer is somewhat less tiring to use than a straight key when sending at higher speeds. I prefer it to the keyers built into many modern transceivers, because of its automatic character spacing feature. It takes a bit of coordination to use!

They're similar, but not the same key. Both are good choices IMHO.

Here are links to pictures so you can recognize them:

J-37 (sometimes called "J-41" when mounted on its knee-clamp base):

http://farm3.static.flickr.com/2257/1809667974_a553a9acf4.jpg

J-38:

http://www.hamradiocenter.biz/photos/preowned/j-38.jpg

Note that the J-37 has a plastic base and painted-steel lever, while
the J-38 is almost all metal.

Morse Code lore: The shorting switch on keys was not originally
intended as a tune-up aid.

In the wire-telegraph days, many line circuits were left normally
closed when not in use. That way, any break in the line would be
detected. The shorting switch was used to close the line when *not*
sending.

In radio use, it could be used for tuneup, of course. Also, when a
ship was in grave distress and the radio operator was abandoning ship,
the shorting switch would be closed so that the transmitter would stay
on the air as long as possible.

Back in the dauys of ships having to carry radio operator, the requirement here in Canada was 25 wpm for a commercial operaators license. You had to take the test using a straight key not even bugs were allowed for the test. If memory serves I used a SpeedX hand key to pass the test. There were also some very nice German and English had keys around, left over from WWII that you could use and get upwards of 30 wpm from if you had the skills. The speed recprd holder is W9YZE(SK) at 35 wpm. I believ it is still recorded in the Guinness Book of Records.

Jim-

These keys were provided by several different makers. If you find a
J-37 and a J-38 made by same company, there is a chance they are
identical except the switch-related hardware is missing from the J-37.

That may not be true for all makers, but it was in one case I'm familiar
with. It appeared that the switch hardware could be transferred from
the J-38 to the J-37 without any modifications.

OK all, you've made me do some serious thinking about keys vs bugs/paddles and I think I'll just settle for a good hand key and learn what needs to be learned and worry about the other stuff later. But wait! ....which is better? European style keying with the typical straight bar or the traditional US style keying with the bent-down bar? The more I read, the more confusing it becomes.

First, let me say I'm a bit prone to RSI. Not accute, but I've suffered it often enough to realize it's a potential problem for me. I've read where the US method of the arm resting on the table (bent arm key) is claimed to be more prone to this type of problem (glass arm) than the European style of keying, which I've more than once seen referred to as "speed keying" and uses the straight key arm and has the user's arm off the table. What say you long-time straight key vets?

While I have no problem finding Euro-style keys, I've not found much on the Euro style keying method. Anyone have good references or experiences on this subject. BTW, I find some high-end keys are cheaper without the bent key arm. That, and I've suffered enough RSI in this lifetime. Thank you in advance. ;)

Jim-

My memory from the 1950s is a little dim. I can't find my original J-38, but did find several other keys I've picked up over the years.

There is one J-38 like my original one from the 50s. There are two J-37 keys: one like you described and one like the J-38. One of the J-37s is mounted on a knee-clamp!

The J-37 that is like the J-38, has the switch part attached to the hot contact. However the place where the switch lever would bolt to the base, is missing. I think this was the case I remembered from years ago. Half of the switch is there, but there is no provision to attach the lever.

NB-

As you asked in your original post, you need to find a key. Any key. And get on the air! Your code speed will improve more rapidly when you are forced to copy in a way you can't when listening to a recording.

It may not matter which style of key you get, as far as RSI is concerned. You can operate either kind without resting your hand on the desk.

One feature you may like is a Navy knob. The Navy knob has a round disk under the knob. You can make one by drilling a hole in a poker chip, and mounting it under the original knob.

I am a retired Police Dispatcher.. One day one of my dispatchees had a radio problem (Bad Mic cable) and could not talk to me.

Since we were both licensed hams, and both knew it. We managed to get the necessary traffic passed and his rig scheduled for a very quick visit with the Radio Shop.. No problem.

So, CW may be dead... But the number of carriers I find on the band suggests... NOT.

Though I do admit I now know why folks were saying "GOD IS DEAD" some years ago... But that is a topic for a different NG.

(NOTE: This statement does not comment on anything other than my knowledge of that subject.. It is thus, NOT open for discussion)

316. Nebraska Hams Respond to Telephone Outage

Newsgroup: rec.radio.amateur.moderated
Date: 2010-04-05 16:10:19 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20100405132202.13A0D203A2@bmail.arrl.org>
Source record: 1438
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,nebr.misc,rec.radio.info

At about 7:45 Thursday morning, April 1, Windstream Communications suffered a major landline telephone switch failure. The result was a loss of landline telephone service at least 12 counties and 36,000 customers in Nebraska. There was also spotty loss of cell phone service where cell sites were interconnected by Windstream. Emergency services, including 911 centers, in Lincoln and several other communities were left without landline telephone communications.

The Lancaster County Emergency Management Director, Doug Ahlberg, activated the amateur radio "Y2K" plan. This plan places hams at prominent intersections and, if need be, public emergency service locations throughout the city. Since there was, in effect, no 911 service in the city, the Lincoln-Lancaster Emergency Operations Center was activated and, under the direction of the ARRL Lancaster County Emergency Coordinator, Reynolds Davis, K&#65533;GND, hams were assigned to the EOC and 15 major intersections around the city. Emergency bulletins on television and radio stations carried information about where hams were stationed. Hams could help citizens obtain emergency services. They also watched out for vehicle accidents and obstructions to traffic.

This is the fourth time that the "Y2K" plan, originally established in anticipation of the loss of communications at the end of the last century, has been used. Earlier activations were due to localized loss of communications at dispatch centers.

By the time telephone service was restored, at 11:20 pm Thursday, 62 amateur radio operators had devoted a good part of the day to ensure the safety of the people of Lincoln. Their calls were: W&#65533;ADI, K&#65533;AIZ, N&#65533;AZN, N7AZN, W&#65533;BCL, KD&#65533;BCT, KD&#65533;BSA, KC&#65533;CDQ, N&#65533;CRL, KD&#65533;DEU, N&#65533;DEX, KD&#65533;DIU, N&#65533;DIZ, KB&#65533;DNP, KD&#65533;DVR, W&#65533;EMA, K&#65533;EPP, W&#65533;ERT, KD&#65533;EYM, W&#65533;EZ, KC&#65533;FDL, N&#65533;FYE, K&#65533;GND, KA&#65533;GON, KD&#65533;HYM, KD&#65533;HZM, KD7ITK, K&#65533;JIC, KI6JOJ, K&#65533;JSL, KE&#65533;JT, KB&#65533;KA, KC&#65533;KIE, AC&#65533;LN, N&#65533;LNK, N&#65533;LWL, NG&#65533;M, KD6MXE, K&#65533;NEB, KC&#65533;OZE, WA&#65533;QYI, N&#65533;QYM, N&#65533;RHL, WB&#65533;RJJ, KN&#65533;RKY, KC&#65533;RSU, KB&#65533;RZP, KB&#65533;SND, KC&#65533;SVX, KE&#65533;TAS, N&#65533;UJR, N&#65533;UXW, W&#65533;VDM, KC&#65533;VNJ, KC&#65533;VRL, W&#65533;WKP, KB&#65533;WZG, N&#65533;XLT, N&#65533;XY, KC&#65533;ZBB, KC&#65533;ZBD and N&#65533;ZXR.

There was significant press coverage with photographs, interviews, and video clips of hams "on duty" presented to the public. The public was reminded, once again, that when all else fails, there is ham radio.

Congratulations to everyone for a job well done.

Fifty years ago, My buddy and I (in jr high, then) were going to become hams. Short story, my family moved, my new surroundings opened up new vistas and I put all my energies into becoming a rock musician. While my buddy went on to get his license, I did not. I now want to. As for the cw thing, I'm a romantic and from a different time.

>> I was gonna buy a Vibroplex Know Code key, but the reviews
>> are less than heartening.

> I own the Standard version and I haven't had any issues with
> it. What exactly were the faults with this?

eHam had one review where the owner described the key as having a "soft" feel:

"The only thing I didn't like is the feel of the contacts. It has a 'soft' feel due to the upper contact being mounted to a tab, instead of directly to the lever. The tab bends as contact is made, acting like a leaf spring. I suspect this is the same situation on all versions of the Vibroplex straight key.

The solution was simple. I placed a #4 flat washer between the contact tab and the lever, beside the existing screw and washer. It was necessary to remove the lever assembly to accomplish this. The new washer is held in place by the top protrusion of the upper contact. It fills the gap between the tab and the lever and prevents any spring action from occuring in the contact tab, providing a more typical feel to the key's action." --N0NV

I don't want a "soft" feel and think spending almost $200 on a key I may need to modify is not in my best interests.

It's been pointed out that Vibroplex has a new owner and perhaps some design and/or quality control issues will improve. We'll see.

Not at all a surprise. The issue I've always had with comparing Ham radio to the internet is that it's a real apples/oranges thing. For some strange reason, the internet is/was thought of as some sort of high tech wonderland. I've been there for a long time, and high tech the internet isn't. It's a matter of software and "which option do I choose". While still a great medium, the internet is at least for me, a tool, and doesn't hold a lot of interest, beyond what I need to do my work and play with.

Whereas radio on the other hand, is what one might call a live medium. It isn't automatic, even the person who uses only store bought gear has to learn how to use it. And the settings need to be changed all the time. Oddly enough some of the detractors of Ham radio liked to point out how you could contact anyone in the world via internet. Yup indeed. With Ham radio, you need to know the right times, right band and right frequency, and sometimes have a bit of luck to contact another ham across the world. But doing it without any structure between you and the other guy or gal is the hook. I'll never forget the first time I QSO'ed with a Ham in Australia on 10 meters. It would be hard to feel the same about a phone call. Or a chat room.

I did have to chuckle at the part where the article notes that die hard Hams have to agree that Amateur Radio will never be a mainstream hobby. It's true, and I wouldn't have it any other way.

Hi Notbob,

I think maybe Jeff's comment was toward what does or doesn't make a real Ham. The great thing about Ham radio is that there are so many facets to the hobby. So many in fact that it isn't possible to determine one particular part's worth over another. Morse code use is one of the coolest parts of the hobby, in which very unsophisticated and low power equipment can in the hands of a skilled practitioner of the art, be used to communicate around the world. Doesn't get much better than that. Your comment about the Romantic in you is spot on. I love the old equipment, one of my borrowed sayings is that "I love the smell of a tube rig in the morning.
Hopefully however, in time you will come to understand that it isn't the mode that makes a real ham - it's the person behind the key, or the mic, or the computer.
Now go get that license, I'll be listening for ya!

It all depends on one's motivation.

> For
> some strange reason, the internet is/was thought
> of as some sort of
> high tech wonderland.

The thing is, for most people, it's not about the technology.

With the internet, cell phones, PCs, etc., what's interesting is the content more than how it gets to you. Most people *expect* it all to work perfectly 100% of the time on the first try, automatically. It's the email/phone call/message/website that's the important part; the technology is just how you get to it.

But ham radio is about "radio for its own sake" and is all about the journey rather than the destination. It's the difference between riding in an airliner from, say, New York to San Francisco and piloting your own airplane over the same route. Sure, in both cases you "flew", but the journey was completely different.

If you send an email to Australia, you *expect* it to get there in a few minutes at most. But working Australia on the air is a completely different thing.

Some people don't get this - in fact, most people don't get it. When someone's first question about ham radio is "what do you talk about?", it's an indication that they don't get it. That's not a bad thing, just a different view.

I agree.

If everyone got a ham license and got on the air, there wouldn't be
enough spectrum for all of us.

No argument there. I do think that as the internet has matured a lot of the more tech minded among us have done a sort of "Okay, time to move on".

Interestingly, the net and computers have helped fuel this. In my own case, I got into Ham radio as a sort of way to get away from the computers. I'd seen them used at my first field day as logging machines, but that was it. Then after getting my license, I found out about the sound card modes, the DX spotting nets, and all the other great stuff available to us as Hams. So in trying to get a hobby away from the computers led me to using them even more. That's okay though, as noted in another thread, I think there are so many different things to experiment with that it's all good.

Now back to the internet, Ham radio has a pretty big presence there, and a lot of it is not commercial, it's some person who made say a loop antenna, is proud of it, and want's to tell the world about it. Maybe it's a person who built their own little QRP rig and a key that fits in an Altoids tin. So they put up a web page. Well, along comes someone else, maybe just browsing around, and hits his site. The curious and technical minded person might just get hooked around that time. Then they read about digital modes, soon the are hooked.

The interesting thing for me is that I have heard many people lament how the Internet was going to kill Amateur Radio. I firmly believe the exact opposite is true. The internet will be one of the best things to happen to Ham radio when all is said and done.

> But ham radio is about "radio for its own sake" and is all about the
> journey rather than the destination.

Oh yeah, I Enjoy the ride as much or more that the destination. I had some tree work done this week. Gave me an excuse to take down my vertical antenna. But Now I'm having fun reinstalling it. I'm making it more professional looking install, and putting in more radials, which has been an ongoing project. I put them in until the knees and back start barking at me, then tune and use it. Then do it again some time later.

Point is, Doing the install, tuning and all are as much fun to me as getting on the air and using it. I'm up to around 20 radials now. I've also found that the number of radials does indeed make a difference. Learned something and had fun doing it. Gunny says "Booyeah!

> Some people don't get this - in fact, most people don't get it. When
> someone's first question about ham radio is "what do you talk about?",

I had to smile here. Once someone asked me what Hams talked about on the air. I said "Nothing". "What do you mean?", they asked. I said we talk about very general stuff, but mostly it's talk about nothing.
"You mean like That show with Jerry Seinfeld?"
I figured I needed to change my approach.

Some historic perspective on growth in US Amateur Radio:

Numbers of US population, the number of US hams, growth over the
previous decade and ratio of hams to population at the start of each
decade from 1930. Thanks to W5ESE for the pre-2010 info. (# of hams is
of individuals and does not include grace-period licenses)

Year Population Hams Growth Ratio
1930 123,202,624 19,000 6,484 to 1
1940 132,164,569 56,000 +194% 2,361 to 1
1950 151,325,798 87,000 +55% 1,739 to 1
1960 179,323,175 230,000 +164% 780 to 1
1970 203,211,926 263,918 +15% 770 to 1
1980 226,545,805 393,353 +49% 576 to 1
1990 248,709,873 502,677 +28% 495 to 1
2000 281,421,906 682,240 +36% 412 to 1
2010 309,026,303 688,326 +4.5% 449 to 1

(hopefully that will stay formatted)

Note that the decade of greatest percentage growth was the 1930s.

Until 2000, the decade of least percentage growth was the 1960s.

==> BPL: CITY OF MANASSAS TO END BPL SERVICE

Once touted as "the most successful BPL deployment in the nation,"
the City of Manassas has decided to get out of the BPL business, once
and for all. At a Special Meeting on Monday, April 5, the Manassas City
Council -- acting on a recommendation from the Manassas Utilities
Commission -- unanimously voted to discontinue Broadband over Powerline
(BPL <http://www.arrl.org/tis/info/HTML/plc/>) Internet service as of
July 1, 2010 to the approximately 520 residents and businesses who
currently subscribe to the service; these customers were told that they
have three months to find a new Internet service provider.

According to Manassas City Clerk Andrea Madden, there was no discussion
on the resolution to discontinue service and the motion was passed
"without incident."

With the motion made by Councilman Jonathan Way and seconded by Mark
Wolfe, the City Council cited three reasons for discontinuing BPL
service: a declining customer base, an annual income deficit of almost
$166,000 from providing Internet service, and a determination that AMI
<http://en.wikipedia.org/wiki/Advanced_Metering_Infrastructure>
[Advanced Metering Infrastructure] platforms don't require BPL. Way and
Wolfe favored shutting down the BPL system in November 2009
<http://www.arrl.org/news/stories/2009/11/19/11206/?nc=1>, the last
time this matter was brought to the Council's attention. "The City
needs to get out of BPL forthwith," Way said back in 2009. "It's not a
good product. The whole business is not financially sound and it never
has been."

Manassas residents pay $24.95 each month to receive Internet service
via BPL. In November 2009, the Utility Commission showed the Council
that little more than 500 residents and 46 businesses currently
subscribed to the service, which since 2008, has been run by the City
```

<http://www.arrl.org/news/stories/2008/10/16/10391/>. "It's costing a little more to maintain the system than we projected in the budget," Manassas Director of Utilities Michael Moon told the Council. "The original projections were that the customer base would be double this." In September 2008, the Manassas City Council voted to assume control of the BPL service from COMTek <http://www.comtekbroadband.com/>, the private company that served (back then) approximately 675 residents.

In January 2009, there were 637 residential and 51 commercial BPL subscribers in Manassas. In February 2010, those numbers had shrunk to 457 residential and 50 commercial subscribers. The Utilities Commission said that the total revenue brought in by BPL for FY2010 was almost $186,000, but the expense of keeping up the City-owned system was costing the ratepayers a little more than $351,000, resulting in a net loss of almost $166,000.

"In October 2003, the Manassas City Council was told that it could expect as much as $4.5 million in revenue from awarding a 10 year BPL franchise," said ARRL Chief Executive Officer David Sumner, K1ZZ. "Instead, six months later, BPL had turned into a money pit for the City of Manassas. Anyone thinking of investing in BPL would do well to learn from the Manassas experience."

In November 2009, Manassas' Assistant Utilities Director (Electric) Gregg Paulson told the ARRL that they had "every intention of putting BPL Internet service in the budget and the Council can decide its fate as they work through the budget process." Paulson also said that while Internet service to consumers would "probably" be the only thing that would be cut if the Council decided to forego BPL, he left the door open as to using the BPL infrastructure for other purposes: "We still own the BPL network, but we may or may not use this network for utility monitoring or other AMI purposes."

But according to the resolution passed by the Council, the Manassas Utilities Department will not be using BPL for AMI, but instead will use "a combination of fiber and wireless technology exclusive of the BPL." According to the Agenda Statement for the Special Meeting, the BPL equipment will be removed from the system and "inquiries will be made regarding the salvage value."

Sumner said that the ARRL's concern was not with the business plan -- that he termed "obviously flawed" -- but with "the interference to licensed radio services -- and in particular the Amateur Radio Service -- inevitably caused by putting radio frequency energy on unshielded, unbalanced conductors. Manassas was touted as 'the most successful BPL deployment in the nation' when FCC Chairman Michael Powell visited the site with much fanfare -- and, the ARRL maintains, in violation of the FCC's own rules -- on the eve of the FCC's vote to adopt inadequate protection for licensed radio services against interference from BPL systems. The taxpayers and ratepayers of Manassas are not the only ones who benefit from the end of this ill-considered foray into BPL. Radio amateurs in the Manassas area have good reason to celebrate, for they

have spent countless hours documenting the widespread interference caused by the system."

BPL technology uses the electricity grid in a city and the wiring in individual homes to provide direct "plug in" broadband access through electricity sockets, rather than over phone or cable TV lines. Because BPL wiring is physically large, is often overhead and extends across entire communities, these systems pose a significant interference potential to over-the-air radio services, including Amateur Radio.

==> FCC NEWS: ARRL RESPONDS TO FCC'S NPRM CALLING FOR NEW RULES ON VANITY AND CLUB CALL SIGNS

In November 2009, the FCC issued a Notice of Proposed Rule Making (NPRM) -- WT Docket No 09-209 -- seeking to amend the Commission's Amateur Radio Service rules in an attempt to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations. In March, the ARRL submitted comments and additional proposals to the FCC to update the Amateur Service's call sign assignment system and provide for continued growth of the Amateur Radio Service, as well as enhance the pride and satisfaction of licensees in their personal achievements in the radio art. The ARRL's positions were developed by the Executive Committee at its March 13 meeting. Read more here <http://www.arrl.org/news/stories/2010/04/07/11423/?nc=1>.

==> FCC NEWS: ARRL FILES COMMENTS IN RESPONSE TO HOSPITAL ASSOCIATION SEEKING BLANKET WAIVER REQUEST FOR AMATEUR RADIO DRILLS

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- asking whether the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored."

Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." On April 2, the ARRL filed comments regarding the blanket waiver request. Read more here <http://www.arrl.org/news/stories/2010/04/07/11425/?nc=1>.

==> FCC NEWS: ARRL FILES PETITION FOR RECONSIDERATION OVER WAIVER FOR NON-AMATEUR DEVICE IN 70 CM BAND

In January 2008, a company called ReconRobotics filed a request with the FCC for a waiver of Part 90 of the Commission's Rules with respect

to the Recon Scout -- a remote-controlled, maneuverable surveillance robot designed for use in areas that may be too hazardous for human entry. A waiver is required to permit licensing of the Recon Scout because the device operates in the 430-448 MHz band, which is allocated to the Federal Government Radiolocation service on a primary basis, as well as the Amateur Radio Service and certain non-federal radiolocation systems on a secondary basis. More than two years later, the FCC granted the waiver request in the form of an Order (WP Docket No 08-63), subject to certain conditions. The ARRL had opposed the waiver on the grounds that the device has a significant potential to interfere with amateur stations and that the company is simply trying to avoid redesigning for the domestic market a device that was designed for military use overseas, and as such, filed a Petition of Reconsideration with the FCC in late March. Read more here <http://www.arrl.org/news/stories/2010/04/06/11422/?nc=1>.

==> PUBLIC SERVICE: TELEPHONE OUTAGE IN NEBRASKA WAS NO APRIL FOOL'S JOKE

Early on the morning of April 1, almost 40,000 people in Southeastern Nebraska -- including the City of Lincoln's government, business and emergency centers -- found that they had no landline telephone service, as well as spotty cell phone coverage, thanks to an equipment malfunction at a Lincoln switching facility owned by Windstream Communications. According to news reports, residents of 12 counties were unable to contact 911 and dispatch centers had rely on other communications services -- including Amateur Radio. Read more here <http://www.arrl.org/news/stories/2010/04/05/11421/?nc=1>.

==> ON THE AIR: THE FIRST ROOKIE ROUNDUP -- COMING APRIL 18!

The ARRL's newest contest -- the Rookie Roundup -- is getting a lot of buzz among newly-licensed amateurs. Designed as a modern equivalent to the ARRL Novice Roundup from a few decades ago, this new incarnation combines a competitive event with some on-the-air training. The first Rookie Roundup is scheduled for April 18 and will be an SSB contest. The Rookie Roundup is six hours of fun on a Sunday afternoon that is designed to give new hams a chance to get their feet wet on HF and 6 meters. Old-timers are encouraged to get on the air and work the Rookies, just as in they did in the Novice Roundups. The six hour event -- from 1800 UTC-2359 UTC -- will be held on the third Sunday of April, August, and December. SSB, RTTY, and CW will be featured in the different months. Read more here <http://www.arrl.org/news/stories/2010/04/08/11426/?nc=1>.

==> COMING UP IN QST : CHECK OUT WHAT'S IN THE MAY ISSUE

The May issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting -- including a breakdown of the Second ARRL Homebrew Challenge -- the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest

articles, as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/04/07/11424/?nc=1> to discover what's in store for you in the May issue of QST, the official journal of the ARRL.

==> ON THE AIR: MOONBOUNCE FOR EVERYONE -- COURTESY OF THE ARECIBO RADIO TELESCOPE!

Sending Amateur Radio signals to the Moon and back has never been easy. After roundtrip journeys of nearly half a million miles, even the most powerful signals generated by hams are exquisitely weak on arrival. Because of the equipment and expertise necessary for successful "moonbounce" operating, this facet of Amateur Radio generally has been confined to a small audience. But for three days in April even hams with very modest stations will have the opportunity to experience the thrill of moonbounce, thanks to the giant radio telescope at the Arecibo Observatory in Puerto Rico. Read more here <http://www.arrl.org/news/stories/2010/04/07/11420/?nc=1>.

==> SOLAR UPDATE

Tad "Pay no worship to the garish Sun <http://shakespeare.mit.edu/romeo_juliet/romeo_juliet.3.2.html>" Cook, K7RA, reports: A strong solar wind blasted us on Monday and Tuesday, causing the biggest geomagnetic storm since 2006. On those days, the mid-latitude A index was 28 and 22 and the planetary A index was 49 and 46. A search for similar numbers over the past few years yields nothing. In 2009, the highest planetary A index was 19 on August 30, and in 2008 it was 37 on October 11. This is indicative of how quiet space weather has become in the past few years. In 2007, the planetary A index reached 30 on April 1, and we have to go back to 2006 to find any geomagnetic activity as strong, when the planetary A index reached 63 and 104 on December 14-15. It seems counter-intuitive, but average daily sunspot numbers rose by 3.5 points this week to 32.4, while the average daily solar flux dropped more than 7 points to 77.8. NOAA and USAF predict solar flux at 76 for April 8-9, 75 on April 10-14 and a jump to 80 on April 15. The same forecast predicts planetary A index settling down to 15, 8, and 5 for April 8-10. For some reason, despite the high geomagnetic activity, no reports have come in from 6 meter operators about auroral propagation. Perhaps we will hear from them before Friday when this week's bulletin is released. Look for more information on the ARRL Web site on Friday, April 9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by William Shakespeare's Romeo and Juliet <http://shakespeare.mit.edu/romeo_juliet/romeo_juliet.3.2.html> (Act III, Scene 2).

==> ARRL PUBLICATIONS: NEW EDITIONS OF THE ARRL HAM RADIO LICENSE MANUAL, TECH Q&A NOW AVAILABLE

Discover all the excitement of Amateur Radio when you get your Technician license -- your ticket to the unique mix of fun, public service, technology and experimenting with electronics. The ARRL Ham Radio License Manual and ARRL's Tech Q&A will guide you as you get started in Amateur Radio, helping you select your equipment, set up your first station and make your first (of many!) contacts. These manuals -- designed for Technician exams given after July 1, 2010 -- contain all of the information you need to study for and pass the 35 exam questions derived from the new

Technician class (Element 2) question pool. The questions in the pool provide for the new Technician licensee to be able to establish his or her station and operate it legally, courteously and safely. The new Technician pool contains approximately 400 questions, from which 35 are selected for an Element 2 examination; the exam will contain graphics and diagrams. When you use The ARRL Ham Radio License Manual and the ARRL's Tech Q&A to study for your first license exam, you'll be on the air in no time! Every page presents information you will need to pass the exam and become an effective operator, such as radio and electronics fundamentals, operating station equipment, communicating with other hams, licensing regulations, operating regulations and radio safety. Read more here <http://www.arrl.org/news/stories/2010/04/05/11419/?nc=1>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=6LsUNXPtObs> This week, the Montana QSO Party is April 9-11. The Japan International DX Contest, the QCWA Spring QSO and the Georgia QSO Party are April 10-11. Next week, the TARA Skirmish Digital Prefix Contest, the Holyland DX Contest and the EU Spring Sprint are April 17. The Michigan QSO Party, the Ontario QSO Party and the YU DX Contest are April 17-18. The Run for the Bacon QRP Contest is April 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member

Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1704 - April 9 2010

Amateur Radio Newsline report number 1704 with a release date of
Friday, April 9th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. 911 service fails in Lincoln Nebraska and
its ham radio to the rescue. Also, Southern California hams prove
that they can mobilize for an earthquake, a Kentucky radio club wants
to recycle old TV towers for emergency communications use and National
Public Radio says that ham radio is alive and growing. Find out the
details on Amateur Radio Newsline(tm) report number 1704 coming your
way right now.

RESCUE RADIO: LINCOLN NE 911 OUTAGE BRINGS OUT HAM RADIO Y2K PLAN

Its was no April Fools joke on Thursday, April 1st. Thats when the
local telecommunications provider Windstream lost its interconnect
ability and phones literally went out in South-Eastern Nebraska. It
also brought out a cadre of well trained ham radio operators to fill in
until service could be restored. Joe Eisenberg, K0NEB, lives in
Lincoln and explains what failed:

--

KONEB: "At about 7:45 a.m. the main switch which controls the Windstream
Inter-Exchange switching in Lincoln, Nebraska, and 12 surrounding counties
failed, and then the redundant switch failed as well causing phone calls
that would go between exchanges to be disrupted as well as all 911 service
in the multi-county area to cease to exist. So we hams have been out on
location throughout the city of Lincoln and areas of Lancaster County
stationed at major intersections in case somebody needs to contact 911."

--

According to the Nebraska Department of Health and Human Services, 911
service was out for all or part of Butler, Seward, Saunders, Clay, Adams,
northern Gage, Jefferson, Cass, Saline, Richardson and Fillmore counties,
as well as Lancaster county. Responding to the emergency were 68 hams
belonging to the Lincoln Amateur Radio Club and Lincoln ARES. They were
activated throughout the day to become the emergency communications
replacement for the 911 service. It was a callout that Lancaster Country
Emergency Coordinator Reynolds Davis, K0GND, says that area hams had spent

over a decade preparing for. Preparations that began because of dire predictions News Years Eve 2000:

--
K0GND: "We implemented our Y2K plan which we put together in late 1999 in anticipation of all the doom and gloom people had worried about. Although it was not necessary that night, since then we have implemented it four different times for massive telephone outages."

--

While the predicted computer failures of Y2K never occurred, it did place Lincoln area hams in a unique position to respond to communications emergencies that have occurred over the past decade. So nobody was surprised when the general call for assistance went out this time. Again, Reynolds Davis, K0GND:

--

K0GND: "On Y2K night the newspaper had a map of the city printed on the front page, and at major intersections -- each one of these within a half miles of residents of the city -- that's how they were selected. And we (hams) became a phone booth with flashing lights and a sign on the car and so forth -- should an emergency call be needed after midnight on that night. I think that plan covered some 60 intersections within the city

"This time it was a scaled back call-up but none-the-less it was the same plan and we ended up with 26 major intersections last Thursday when this all occurred. And they were staffed essentially from 8 in the morning until about 11:30 p.m. when we finally secured"

--

What may surprise some is that this entire operation only entailed the use of one repeater on the two meter band. Davis credits the self discipline and emergency service training of the regions ham radio community for making this possible. He also notes that the training never stops:

--

K0GND: "We have nightly nets on the same repeater. There are ARES nets every night of the week. We do lots of drills and a tremendous amount of public service. Last year almost 5000 volunteer hours of public service by the club. And all of those things keep your discipline up and your ability to listen out: - which is a key to running a large net with a lot of people.

--

K0GND tells Newsline that thankfully the ham radio communicators only had to handle a small number of 911 incidents. The worst of these was a house fire that they were requested to report. Another dealt with a police officer involved in tracking down a missing child. And it took the better part of a day before 911 service was restored cross the affected area and the ham radio operators could stand down and go home. (ARNewsline(tm))

**

RESCUE RADIO: SOCAL HAMS ACTIVATE FOR MEXICALI QUAKE

Hams in Los Angeles County activated briefly after shock waves from the 7.2 magnitude earthquake in Baja California. Mexico, were felt at about 03:50 PM Pacific time on Easter Sunday. The Los Angeles Section ARES immediately activated it's emergency net with hams from all over the area checking in.

But there were no reports of commercial communications outages, utility outages or even any damage in and around the local area and soon attention was turned to the South. That's when the nets Spanish speaking operators were asked to monitor the High Frequency bands for possible traffic from the quake area.

Dr. Armondo Montalvo, KI6TAA, in the Los Angeles suburb of Woodland Hills was able to contact Franscisco Menses, XE2FMS, in the city of Mexicali, Mexico, along with mobile operators XE2DZZ and XE2BRL . Initial reports said that most stations in and around the quakes epicenter were without electric power. Also, the major highway between Mexicali and Tijuana, Mexico suffered severe thrust fault damage. This information was forwarded to the United States Geologic Survey for it to act on.

In all, some three dozen stations were involved at one time or another during the call-up, but no large scale ham radio relief effort was needed on either side of the United States and Mexico border. Never the less, area ham radio emergency planners say it was definitely a good test of the ability of the regions hams to respond at a moments notice. (LAX ARES)

**

RESCUE RADIO: KY CLUB WANTS TO RECYCLE OLD TOWERS FOR EMCOMM WORK

A group of Bowling Green, Kentucky area ham radio operators want to give new life to old residential TV towers by incorporating them into an emergency communications system. The Kentucky Colonels Amateur Radio Club and the Kentucky 4th District Amateur Radio Emergency Services are seeking donations of the TV towers, which have become increasingly obsolete as more households have turned to cable, satellite and digital TV providers.

In an article in the Bowling Green Daily News, Bill Schlicht, KJ4DGW of the Kentucky Colonels Amateur Radio Club said members will remove the towers for free, recondition them and install them at numerous locations in the 10-county Barren River Area Development District. This, to support emergency communications among ham radio operators, hospitals, county emergency management directors, American Red Cross chapters and other emergency workers.

Schlicht told the paper that club members are covered by liability insurance during performance of club activities, and removing the TV towers will not cost the homeowner anything. He says that his ham radio association wants to set up at least 16 towers, mainly at area hospitals where ham radio operators can communicate with emergency workers during a

large-scale disaster. There are about 400 amateur radio operators in Warren County and the Bowling Green area.

You can read the rest of this article at: http://bgdailynews.com/articles/2010/03/31/news/news6.txt (BG News, eHam.net)

**

RESCUE RADIO: UK CLUB GETS 5000 POUND PUBLIC SERVICE GRANT

Meantime, over in the United Kingdom, the Itchen Valley Amateur Radio Club has been awarded nearly 5000 British Pounds in Lottery funding. This, to assist with providing community based radio projects that will include supporting the Radio Amateur Emergency Network in providing communications coverage for disaster and emergency exercises as well as real time responses.

The grant will primarily be used to equip a portable radio station with a 25 foot trailer tower with antennas, and a portable generator system to enable the station to provide communications services without mains power or the normal mobile phone networks. This stand alone capability will allow the club to contribute to the telecommunications infrastructure supporting long-distance events that involve communications and control in isolated places.

In addition, part of the grant will provide funds for working with local youth organizations such as Scouts and Guides, as well as other public projects to broaden awareness of amateur radio. 5000 British Pounds is the equivalent of about $7600 United States dollars.

HAM HAPPENINGS: NPR SAYS HAM RADIO IS GROWING

National Public Radio says that ham radio is alive and well, and its even produced a segment of its All Things Considered program to prove it. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

Ham radio is far from the dying hobby that the nay sayers claim it to be. One that only a few years ago was being touted by techno blogs alongside 35 mm film and home videotape as technologies slated to quickly disappear.

Well, National Public Radio says that the bloggers were wrong because there are now nearly 700,000 U-S citizens who have ham radio licenses. NPR says that number is up by some 60 percent since 1981. And Says NPR, that number is growing.

The NPR story quotes Allen Weiner. He is an analyst at the technology research firm Gartner and Associates. Weiner says that while ham radio will never have the sex appeal of the iPhone, it does have a certain level of what he terms as nerd appeal.

Weiner also explains growth in our specialized communications interest in this way. He says that if it creates its own experience, that's really what's key here. Conversely, if it just emulates an experience that you can get online, it's not going to grow.

The report concludes by noting that even the most die-hard hams admit that amateur radio will never be a mainstream hobby. But says National Public Radio, people are still discovering the joy of communicating with the technology of amateur radio. A technology that has existed for nearly a century.

Still enjoying ham radio from Scottsdale Arizona, I'm Norm Seeley, KI7UP, reporting for the Amateur Radio Newsline.

--

You can hear the NPR story on ham radios growth at the URL found at http://www.npr.org/templates/story/story.php?storyId5586086
(Adapted from NPR web post)

**

RADIO LAW: EVEN WHEN ITS WRONG THE FCC IS RIGHT

Parties relying on informal discussions with commission staff do so at their own risk. At least that's the lesson that's been learned KRNW- FM which has been ordered to pay a $5,000 fine for what amounts a simple clerical error based on information a Commission representative gave to the broadcaster.

According to the trade publication Radio World, KRNW FM is located in Chillicothe, Missouri, and is licensed to Northwest Missouri State University. Its case started with the expiration of the license in early 2005, The FCC says that the station didn't file properly until two weeks later, and it didn't seek an STA to continue to operate or give a reason for the failure to file on time.

When the fine was handed down the college, which also owns KXCV FM, appealed. It argued that the fine was unfair because it did in fact try to renew properly. It said FCC staff had told the station manager to file both station renewals on the same form, and the manager did so.

Now, in upholding the fine the commission said that while allows for some stations to file on the same form, the manager should have filed, as she did in the past, a separate renewal application for the KRNW. It added

that Commission precedent has established that parties relying on informal discussions with FCC staff do so at their own risk. The commission may still enforce its rules despite the public's reliance on allegedly erroneous staff advice. (RW)

**

RADIO LW: FCC LOSES COURT BATTLE OVER NET NEUTRALITY

A federal court in Washington D.C. has handed the FCC a major defeat and at the same time has thrown the future of Internet regulations and United States broadband expansion plans into doubt. It happened on Tuesday, April 6th when the U.S. Court of Appeals for the District of Columbia ruled that the Commission lacks authority to require broadband providers to give equal treatment to all Internet traffic flowing over their networks. Amateur Radio Newsline's Frank Haas, KB4T, has the details:

--

The unanimous ruling by the three-judge panel marks a serious setback for the FCC which is trying to adopt official net neutrality regulations. FCC Chairman Julius Genachowski believes that such rules
are needed to prevent phone and cable companies from using their control over Internet access to favor some kinds of online content and services over others.

On the other side, the court decision was a big victory for Comcast Corporation. Comcast is the nation's largest cable company and it had challenged the FCC's authority to impose network neutrality obligations on broadband providers. This following a 2008 Commission finding that centered on Comcast's actions in 2007 when it interfered with an online file-sharing service called BitTorrent.

In its decision, the court essentially held that it was not for the FCC to determine which of Comcast's customers was entitled to better levels of service than another. Rather that this is a business decision that Comcast was free to make.

Public advocacy groups have already reacted negatively to the court decision. They contend that the ramifications of the ruling are much broader. That's because it undercuts the FCC's ability to prevent broadband providers from becoming gatekeepers for many kinds of online services. This could include Internet-based phone services and even software that runs in a Web browser.

The decision also has serious implications for the FCC's national broadband plan released by the FCC last month. The Commission needs undisputed authority to regulate broadband in order to pursue some its
key recommendations. In a statement following the release of the decision, the FCC said it remains committed to promoting an open Internet and to policies that will bring the enormous benefits of
broadband to all Americans.

At this point the FCC has several options. It can do nothing and let the ruling stand. That's highly unlikely.

It could ask Congress to give it explicit authority to regulate broadband, but that could take years. Or, it could appeal the matter to the United States Supreme Court which could also take years.

Or as some observers believe, the Commission might simply reclassify broadband as a more heavily controlled telecommunications service. One which could be subjected to both intensive scrutiny and heavy regulation.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

We should know what direction the Commission will take in a matter of weeks. (Published news reports)

**

HOT OFF THE PRESS: NEW DX BOOK AVAILABLE BY W9KNI

'A Year of DX' is a new book by noted author Bob Locher, W9KNI that follows him as he makes an all out effort to win the 2008 running of CQ Magazine's DX Marathon. The Marathon is a year long operating event during which a contestant works as many countries and CQ zones as possible, any band or any mode.

While the book chronicles Bob's efforts in the pileups and through the lonely watches of the night, it also contains other discussions of what DX'ing is all about. These include the possibilities of DX'ing in low sun spot periods contributed by Jim Henderson, KF7E, a chapter on optimizing your SSB transmit audio by Hall of Famer Chip Margelli, K7JA, a discussion of what is the ideal linear amplifier, and much more.

Anyone who read and enjoyed Bob's 'Compete DX'er' is sure to find this book equally worthwhile. Its publication date is scheduled for May 1st. More information is on-line at www.idiompress.com/yearofdx.php (Via e-mail)

**

HAMVENTION HAPPENINGS: SPEAKERS LIST RELEASED FOR DX FORUM

The SouthWest Ohio DX Association has started to announced its line-up for the DX Forum at this year's Dayton Hamvention. Guest speakers include Tom Harrell, N4XP, of the K4M Midway Island 2009 DXpedition, George Wallner, AA7JV who operated TX3A from Chesterfield Reef and Paul Ewing, N6PSE of the YI9PSE operation from Iraq. Don Dubob, N6JRL, will be this year's forum moderator and at the close of the session the SouthWest Ohio DX Association will be raffling off a Yaesu FT-2000 transceiver. (SWODXA)

**

PROMOTING HAM RADIO: FREE ARRL WEBINAR ON PUBLICIZING FIELD DAY APRIL 22

Hams involved in planning their clubs Field Day activities are invited to take part in free 90 minute webinar on April 22nd. Hosted by the ARRL's Atlantic Division in cooperation with the League's Public Relations Committee, this session will focus on how to publicize your groups Field Day outing so as to gain maximum recognition for the hobby.

Among the topics to be covered will be how to set up a Field Day publicity calendar. How to get audio and video Public Service Announcements on local radio and TV stations. How to get proclamations issued and even how to use social networks like Facebook and Twitter to draw people to your Field Day event.

Also covered will be the correct way to invite elected officials and dignitaries to your Field Day site. Depending on whom you get to show up, this can bring with it good local, regional or even national press coverage. And according to Allen Pitts, W1AGP, who is the ARRL's Public Relations Manager, the guest list reads like a whose who in ham radio media relations:

--

W1AGP: "You have got Walt Palmer recently of ABC News - television; Diana Eng will be working with Facebook and Twitter; Bill Morine on print journalism will be talking on how to schedule and set up things; Kevin O'Dell who until recently made television commercials will be talking about how to make up your own Public Service Announcements and videos. And then of coarse you have got me."

--

And I'll be on that panel too talking about media relations with broadcast radio.

Again, the date for this on-line seminar is Thursday, April 22nd beginning at 9:00 PM Eastern Daylight Time. To pre-register take your web browser to https://www1.gotomeeting.com/register/932645064 (ARRL)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESTRUCTURING: BAHARAIN IMPROVES ITS AMATEUR SERVICE

Licensing of the amateur service in the Kingdom of Bahrain has taken a major step forward. This, with the release of new amateur service rules by the nations telecommunications regulatory authority.

New additions for the Bahrain General Class licensees include 135.7 to 137.8kHz with a power limit of 10 watts. Also, regulators have extended the 160 meter band changing the upper limit to 2000 kHz. They have also expanded 40 meters up to 7200 kHz and added access to the 30 meter band as well. Above 30 MHz new additions include 6 meters from 50 to 52MHz and improved access to bands at 430MHz and above.

Also, Bahrain now has a new Intermediate Class license that permits operation at 28 MHz and above with power output to the antenna of 100 watts. Aeronautical Mobile, Maritime Mobile, Mobile and Portable operations are also permitted within the terms of the new license.

It should be noted that with the exception of the segment 50 to 50.5MHz, which is primary, all new allocations have been granted on a secondary basis. Permitted power to the antenna on all bands except 136 kHz is 1500 watts. (GB2RS)

**

WORLDBEAT: WORLD AMATEUR RADIO DAY APRIL 19

"Amateur Radio: combining communication experience with modern digital techniques" is the theme of this years World Amateur Radio Day. Scheduled for April 18th, World Amateur Radio Day is an international celebration of the hobby sponsored by the International Amateur Radio Union and its member societies representing over 150 countries.

Since 1925, the IARU has been instrumental in coordinating and representing amateur radio on global matters. It says that in today's world that it is radio amateurs who are finding ways to use frequencies at the fringes of the radio spectrum while developing marriages of radio and the internet, and experimenting with digital and satellite communications.

For information about World Amateur Radio Day and the International Amateur Radio Union please take your web browser to www dot IARU dot org. (IARU)

**

HAM RADIO IN SPACE: DARA TO MATCH DONATIONS TO AMSAT

The Dayton Amateur Radio Association says that it will match one-for-one any donations made to AMSAT-NA between now and June 30th of 2010. This, up to a maximum of $5,000.

The matching funds will be earmarked in support of the "Getting AMSAT Back into Space" campaign and help us raise the funds needed for the next satellite project which is a cubesat that will provide a 2 meter-70 Centimeter FM transponder that will match the ground performance of AO-51.

More on this matching fund is on line at www.amsat.org. (ANS)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM IN CHICAGO IN OCTOBER

The 2010 AMSAT Space Symposium will be held in Chicago, Illinois from October 8th through the 10th. This years venue is the Elk Grove Holiday Inn near O'Hare Airport. Topics to be covered include presentations on operating techniques along with other sessions covering plans for the future of ham radio in space. For more information please visit www.amsat.org on the World Wide Web. (ANS)

**

ON THE AIR: MOONBOUNCE USING THE 1000 FOOT ARECIBO DISH

The Arecibo Observatory Amateur Radio Club will be putting the 1000-foot radio telescope on the air for 432 MHz E-M-E contacts from April 16th to the 18th. The callsign used will be KP4AO with a transmit frequency of 432.045 MHz and receiving between 432.050 to 432.060 MHz. KP4AO will transmit with 400 watts out but the giant dish will give the signal about 60 db of gain. Translated it means that KP4AO should be able to be heard with a small hand-held yagi pointed at the moon and a good receiver. A 15 db gain antenna and 100 watts will be enough to KP4AO on CW. More is on-line www.southgatearc.org/news/april2010/arecibo_432_moonbounce.htm (Southgate, K1JT)

**

ON THE AIR: CELEBRATING MEXICO'S INDEPENDENCE

On the air, word that the Mexican Federal Telecommunications has authorized the use of the special 4 B prefix for Mexican stations throughout the year 2010. The use of this prefix is to celebrate the bicentennial of Mexico's independence and the centennial of the Mexican Revolution. (OPDX)

**

ON THE AIR: CV7G CELEBRATES THE FOUNDING OF MODERN URUGUAY

And CX7ABK, will be using the special callsign CV7G between April 17th and the 19th. This operation celebrates the landing of 33 Orientales on Agraciada Beach in Uruguay. This was a militant revolutionary group led by Juan Antonio Lavalleja against the Empire of Brazil. Their actions culminated in the foundation of modern Uruguay. And in celebration of this event CV7G will be on 40 and 20 meter SSB. A special QSL card will be issued. You send your QSL via CX7ABK. (OPDX)

**

PROPAGATION: SOLAR WINDSTORM HITS EARTH

In propagation news, what's described as a sharp gust of solar wind hit Earth's magnetosphere on Monday, April 5th, at approximately 0800 UTC. It also sparked the strongest geomagnetic storm of the year.

According to Spaceweather dot com, the event registered 7 on the 0-to-9 K index scale of magnetic disturbances. Although the storm was subsiding by

Wednesday morning, April 7th, it was not over and high-latitude sky watchers were told to remain alert for the possibility of aurora propagation. (Spaceweather)

**

DX

In DX, PG5M, has made available his story called the 'Pacific 2009 Ultra Light Solo DXpedition' in PDF format on the World Wide Web. Its 12 pages long and goes into detail about his activities and netting 13000 QSOs from Fiji, Tuvalu and Tarawa. You can downloaded it at www.dx.to

On the bands, word that S53A is now active from Zanzibar as 5-eye-one-S. This is his first holiday style trip with some radio operation as when time permits. He has been reported on 20. 15 and 10 meters mostly on CW. QSL via S53A, direct or via the bureau.

JI5RPT, will be active as JD1BLY from Chichijima Island between May 2nd and the 7th. His operation will be on 40 through 6 meters using CW, SSB, Digital and the Satellites. QSL via his home callsign JI5RPT.

Lastly, , EA8AY, will be active from the Canary Islands as EF8E. This during the CQWW
WPX CW Contest on May 29th and 30th. QSL via EA8AY.

(Above from various DX news sources)

THAT FINAL ITEM: ITS SPRING ARDF TIME

And finally this week, as the weather warms, it's time to start planning for outdoor radio fun this summer. Opportunities to win medals by finding hidden transmitters are coming, as Newsline's Joe Moell, K0OV, explains.

--

More and more hams every year are discovering the fun of tracking hidden radio transmitters in their cars or on foot. The on-foot variety of foxhunting has become an international sport, with names such as foxtailing, radio-orienteering and ARDF. USA is one of about 30 countries with an active ARDF program, including national championships and participation in the World Championships every two years.

To see the USA's best on-foot foxhunters in action, to learn from them, and to try it for yourself, make plans to come to Ohio this spring. The Tenth USA ARDF Championships will get under way on Friday, May 21. It's a three-day weekend of practice sessions, a big two-meter hunt, and another hunt on 80 meters. It's open to anyone at any foxhunting skill level, with or without a ham license. If you're a senior, don't worry about trying to compete against teenagers. Equal medals will be awarded in six separate age categories for OM's from under 18 to over 70. Five similar age categories divide up the YLs. To be even better prepared, attend the optional two-day

intensive training camp just before the championships.

What could you win? Possibly a medal and a place on our country's team going to the ARDF World Championships in Croatia this coming September. USA can only field a maximum of three people in each age and gender category, so our national championships determine who will go.

Will this be the year that you win a radio-orienteering medal? The registration deadline is coming soon. So for everything you need to know about the USA Championships, including schedules, registration forms and equipment ideas, point your Web browser to www.homingin.com. That's HomingIn, as one word, homingin.com. You can also learn about the World Championships in Croatia and the annual CQ Worldwide Foxhunting Weekend.

From southern California, this is Joe Moell Kay-Zero-Oscar-Victor for Amateur Radio Newsline.

--

Every year interest in Amateur Radio Direction Finding grows. Who knows. One of these days it could become popular enough that the ham radio community might petition for it to become an Olympic medal level sport. (K0OV)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, saying 73 from Reno, Nevada, and we thank you for listening.

Two things to differ: The USA Census has not yet been formally released since the US Census Bureau is still requesting all to send in Census Forms and temporary Census workers are beginning to prepare to get ready to go to work to interview those who have not sent in forms.

The highest-ever number of USA amateur radio licensees occurred on midnight of 1 July 2003 at 737,938 total individual licensees.

A minor point to differ about was the scarcity of 'radio parts' for amateurs building at home and the overall home radio market size not being anywhere near as big as the consumer electronics market of now. I am somewhat familiar with the market scene since I was born in 1932.

In my previous post, I forgot to include the source of the various
numbers not provided by W5ESE.

The current US population came from the "population clock" website:

http://www.census.gov/main/www/popclock.html

which is run by the US Census folks. I'm not sure how often it
updates. Last time I looked it was 309,039,794

The license numbers came from the ARRL website, which is the source of
all the ARS license numbers I've posted:

http://www.arrl.org/fcc/stats.html

As of April 9 2010, the number of current unexpired FCC-issued amateur
licenses held by individuals was:

Novice 16,683
Tech 338,087
Tech Plus 15
General 152,796
Advanced 60,367
Extra 120,631

Total 688,579

which works out to about 1 ham for every 449 people in the USA.

Does anyone here done something like sending ASCII to a microcontroller
which then emits morse code? I'm tinkering around with old telegraph
sounders.

David-

I understand the old telegraph sounders made a clack-clack sound rather than a beep. They also used an earlier version of code than international Morse, where some characters had mini-spaces in addition to dots and dashes.

Either way, the solution may be similar. Use the ASCII code as an address for locating the timing required for each character, stored in a look-up table.

Use a basic timing subroutine. Call it once for a dot or a space. Call it three times for a dash. Before calling it, turn on the output keyer for Mark and off for Space.

If you didn't have an existing sounder, you could generate another timing interval that would repeat at an audio rate for the amount of time the Mark signal would be on.

Here's a webpage where a fellow has done something similar:

http://www.steampunkworkshop.com/

It's on the right hand side of the page, a link called "telegraph
sounder"

http://www.steampunkworkshop.com/telegraph.shtml

I'd note he should have used more and finer wire on his home made
sounder electromagnet. But technical issues aside, it's some gorgeous
handwork. Also he has a bit of software to convert a RSS feed to the
sounder, which is what you might be interested in.

I just think it's really cool to have a mix of 1840's technology
plugged into a computer.

Well that is basically how any CW radio software works David, Most digital programs (used for PSK, Olivia, RTTY and such now days) such as Digipan, Hamscope, DM-780 (Part of the Ham Radio Delux package) all these do CW..

Now with these programs you are sending from the keyboard so you are sending "Key-Code" not ASCII to the CPU. but if you re-direct the input to an RS-232 port using the DOS MODE command,,,, you can then send ASCII to the com-port selected for this job and the computer will send .- ... -.-. .. ..

339. What makes a real ham

Newsgroup: rec.radio.amateur.moderated
Date: 2010-04-14 20:03:40 UTC
From: John from Detroit <wa8yxm@arrl.invalid>
Message-ID: <hq4eu6$h9i$1@news.eternal-september.org>
Source record: 1361

That question was asked in another thread, sort of.. And I'd like to submit an answer

What makes a real ham, as opposed to something else, is a willingness to study and learn about the hobby, and to try new and different things.

For example.. After a whole lot of years doing the same thing.. I upgraded my license, and my radio, and then I discovered new modes.

Soem may say it's making your own hardwere... Well, at one time I do admit if you wanted to get on the air,, You had to home brew, but today that is only an option (I do make SOME of my own stuff)

Some say it's things like Morse code.. but in fact that makes a telegrapher, not a ham..And these days not even a telegrapher.

Some say it's ________ (you fill in the blank) but the fact is that there is so much about ham radio that I can not put it in a post, or even a series of posts.. It would take most of a book to list all the things you can do with ham radio.. The name of that book: Well.. Usually we ARRL members just call it "The Handbook" but the formal name is a bit longer.

340. New Web Address for ARRL Statistics

That's certainly part of it.

I think the "real ham" is distinguished by a set of attitudes and
actions that include what you wrote and a lot more.

For example, there's:

- friendliness to and support of other hams

- high standards of conduct, on and off the air

- setting a good example for both hams and non-hams

- technical and operational know-how

- fairness and true competitive spirit

- being a good neighbor and a good citizen

- respect for Amateur Radio traditions, history, and the contributions
of the past, yet being open to real progress in the present and facing
the challenges of the future.

I think the combination of all those things are what makes "a real
ham".

A person can have lots of willingness to study and learn about the
hobby, and to try new and different things, but if they lack those
other things, I don't think they're "a real ham".

IMHO

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Ever wonder what really goes on inside your radio and computer?
Has someone told you all sorts of nonsense about NPN and PNP "holes"
in silicon, depletion zones, LC time constants, Millihenrys and so
on???????

Here is what really happens!
There are a lot of little men running around inside, doingall the
work.

For an example here is how a cursor works:

HTTP://2006.1-click.jp

Enjoy!

That's one of the first places I looked and where I got the idea.
However, what he did was have a circuit watch the keyboard LEDs. What
I'm trying to do is make something that attaches to an RS232 port. That
way, I can run a three or four wire cable from a server in a back room
to wherever I decide to put my sounder. There are two ways I could do
this. The first is cheap and dirty. It works by energizing the sounder
coils whenever RTS is asserted. That would require special program --
not too tough, but won't be as flexible as in the second approach. The
other is to buffer RS232 in a microcontroller, convert to morse code,
then tap out the message. In effect, this creates a one-way
serial-to-telegraph modem. That second approach is what has me most
interested. Suppose you have a server writing logs to a serial port...
See the sort of bizzare fun that can be had?

I have a couple vintage sounders. Hook a batter and key in serial with
a sounder. When the key is down, the sounder clicks down. Let go and
it clacks up. So, a dot is "click-clack" and a dash is
"click-wait-clack". I think the Mark and Space stuff has to do with the
fact that the line was always kept energized, thus, an idle line would
hold the sounder arm down. That way you'd know immediately if there was
a line fault. That would be a bit wasteful now, so I suppose I should
preceed each message with a very long dash to at least try to fake that
part.

> K6LHA
>

Well.. if your license has expired.. Then you are NOT currently licensed.

So that is how it should be tabulated

Now. I will admit that when my ARRL membership expires I don't plan on renewing (What can I say.. I expect to move when my membership expires and I don't have the zip code for "That big hamshack in the sky" (At least I hope that's where I move to when my life membership expires)

Back to topic.. When it came time for me to renew.. I got a whole bunch of E-mails.. Many offered to take care of it no muss no fuss for $xx.yy.

The ARRL's said basically "CLICK HERE" to renew

Clicking took me to the proper page over at fcc.gov and ... A short time later a new document arrived in my mail box.

As I recall there is international Morse Code and American Morese code..
Two different codes, and one (American I think) is better suited to the
click/clackers and guess what.. That font of much knowledge

http://en.wikipedia.org/wiki/American_Morse_code

Has an article on it at the above link INCLUDING the code itself!!!!

Also called the Railroad code.. IT is not as suited to radio as
International Morse code is.

As to the line running energized.. There are several reasons for this,
Many countries the phone system keeps current flowing in the wires all
the time, this is called "Sealing Current" and if you have the manual
for an old 300 or 1200 baud modem lying about you can read all about it.

The reason for this is to PREVENT line faults, believe it or not. As
well as instant detection of line faults.

Modern teletype (BAUDOT and later ASCII teletype machines) like the Type
15, 28 and 33 all used idle on MARK

One of the more interesting lengths of paper tape I used to have was
punched by one of the national news wires one November back in what,
1963 (The 23th as I recall) You play the tape and it starts typing out
routine items (I recall a farm report or some such but it's been many
years since I played the tape) then suddenly the machine runs "OPEN"
(Space) for a period and then the news flash.. Then it goes back to
routine and again it runs open.. the operator intruppted sends "Go Ahead
Dallas" and we read "The president is dead"

That's some tape.

The original Morse instrument was a device which used a scribe to
imprint a line on a paper tape which was moving past the scribe arm
under tension from a clockwork mechanism.

When the electromagnets were energized, the scribe would make a mark on
the tape. When they weren't, the tape would "space" past the scribe
point without being marked.

Ergo, "Mark" means current in the loop, "Space" means no current. The
early telegraphs were powered by batteries.

There is software available to do what you want to do: visit the Morse
Telegraph Club, http://www.mtc.org/ , for more information.

HTH.

With most sounders, the sound of the armature going down is different from the sound going up, as you describe, so it's more than the time spacing.

> I think the Mark and Space stuff has to do with the
> fact that the line was always kept energized, thus, an idle line would

s
> a line fault.

Yes, but there were several reasons for the normally-energized series line systems.

1) The first systems were powered by wet primary batteries called "gravity" cells. (You can still make your own - all you need is copper, zinc, copper sulphate, water and a jar). Unlike most other kinds of cells, the gravity cells need a load for best results.

2) The primary cells required a lot of maintenance and care. With a normally-energized system, line batteries were needed only at the ends of a line; the telegraph offices in between would not need them (except a cell or two for local loops). A typical line battery would consist of 100 to 200 gravity cells (often half the cells would be at each end) and permit operation over lines of 100 to 400 miles, depending on the wire size and number of intermediate stations. (#9 or #6 iron wire was commonly used for telegraph lines). So you can see the advantage of not needing line batteries everywhere!

3) Besides making a line break obvious, operation up to a break could be had by grounding the line at the last convenient point before the break.

4) Normally energized circuits made duplexing, multiplexing and other systems easier to implement.

The wire telegraph was more sophisticated than some folks give it credit for being.

A telegraph story:

There was a railroad which had an important position open at the division office. Applicants were told to show up on a certain day in the outer waiting room, and wait to be called into the Superintendent's private office for an interview.

The outer waiting room was a busy place, with a telegraph sounder going continuously, various employees doing all sorts of tasks, and the Superintendent inside his private office with the door shut.

A number of applicants showed up, most with years of experience. Each handed their papers to the clerk, took a seat, and waited.

After all the chairs were occupied, a young man arrived - obviously not nearly so experienced as the others. He paused for a moment, papers in hand. Then he walked straight to the door of the Superintendent's private office, opened it, and walked right in, closing the door behind him!

The other applicants looked at each other in surprise and some amusement. Barging in on the Division Superintendent was the best guarantee of never getting any job! One waiting applicant said the word "greenhorn" and the others all nodded.

But a few moments later, the door of the Superintendent's office opened, and the Superintendent came out, followed by the young man. The Superintendent said: "Thank you all for coming, but the position has been filled." It was obvious that the young man had gotten the job they all wanted.

Some of the applicants started to protest, but the Superintendent just pointed to the telegraph sounder. It wasn't on an outside line. It was playing the same message over and over:

"If you can read this, come into my office"

Normally I do not do full back quotes but what you typed bears repeating.

I agree,, I kind of lumped a lot of that into the "Willingness to study"
but in another field I have often said that those truly blessed with the

ability have a need to "Pass it on" (Willingness to help)

The technicial ability is a result of the willingness to study

Respect.... Well.. We could discuss that some but yes, that should be part of it too.

As to being open to real progress.. For many decades we have pushed the progress forward.. to this day Hams still use better hardware than the military in many cases... Why.. Because hams designed it, not military engineers.

Though in fairness... Many of those military engineers are Hams.

My daughter's new beau works (or rather worked) for the Air Force.. In a manner of speaking he was a pilot.. He flew R/C planes.

==> COME EXPLORE THE NEW ARRL WEB SITE!

We'd like to welcome you to come and delve into the new ARRL Web
site <http://www.arrl.org/>. After more than two years of work, the
staff, officers and Board of Directors are excited to show you what's
in store.

As you peruse the site, you'll notice it's set up a bit differently
than the previous site. With the new site, we chose to focus on how you
use Amateur Radio, instead of by departments here at HQ. For instance,
in the "On the Air <http://www.arrl.org/on-the-air>" section, you'll
find information on contesting, awards, Logbook of The World,
international operating, special events, the QSL Bureau (both Incoming
and Outgoing) and more. And in the "Public Service
<http://www.arrl.org/public-service>" section, you will find
information on emergency communication, as well as served agencies and
involvement opportunities. We are aware that some parts of the site are
not yet available. We ask that you be patient while we try to bring
```

everything over to the new site.

<http://www.arrl.org> So go ahead -- take a look around! Make yourself at home on the Web site. We invite you to go ahead and set up your member profile while you're here. Once you log in, click on "Edit Your Profile <http://www.arrl.org/myarrl-account-management>" -- it's located right under the log-in area. Let us know what Amateur Radio activities you enjoy (and once you do, you'll see information about your chosen activities on our home page, personalized just for you). This is also the place where members can sign up to receive The ARRL Letter <http://www.arrl.org/arrlletter> and other e-newsletters, W1AW bulletins, license renewal notices, messages from your Section Manager and Director and more. You can join groups, add friends and even add a picture of yourself!

If you ever need help finding anything or if you encounter any problems, look for the "Having Trouble? <http://www.arrl.org/support>" link at the bottom of each page. Click it and report your problem; you will be contacted shortly with a solution. We hope you will enjoy this new Web site as much as we do here at ARRL Headquarters. Remember -- this is your Web site. Have some fun with it!

==> MIKE COREY, W5MPC, JOINS ARRL STAFF AS EMERGENCY PREPAREDNESS AND RESPONSE MANAGER

The ARRL is pleased to welcome Emergency Preparedness and Response Manager Mike Corey, W5MPC, to the Headquarters staff in Newington. Corey's major responsibilities include addressing the development and implementation of an organizational disaster response plan as well as an operational continuity plan, complete with supporting procedures and training. Corey also will play an integral part in the management of ARESï¿½, and in future negotiations with served agencies with whom ARRL shares or creates Memoranda of Understanding. An Extra class licensee and an ARRL Life Member, Corey comes to the ARRL with almost 20 years of experience with emergency communications. Licensed since 1988, he has been involved with SKYWARN since 1991 and has attended basic and advanced SKYWARN training. He is the co-author of the ARRL Storm Spotter's Handbook, which is due out next month. Read more here <http://www.arrl.org/news/mike-corey-w5mpc-joins-arrl-staff-as-emergency-preparedness-and-response-manager>.

==> FCC NEWS: FCC LOOKS TO LOWER FEES FOR VANITY CALL SIGNS

The FCC released a Notice of Proposed Rulemaking and Order (NPRM) on April 13 seeking to lower the fee for Amateur Radio vanity call signs. Currently, a vanity call sign costs $13.40 and is good for 10 years; the new fee, if the FCC plan goes through, will go down to $13.30 for 10 years, an decrease of 10 cents. The FCC is authorized by the Communications Act of 1934 (as amended) to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term.

The vanity call sign fee has fluctuated over the 13 years of the current program -- from a low of $11.70 in 2007 to a high of $70 (as first proposed in the FCC's 1994 Report and Order). In 2007, the Commission lowered the fee from $20.80 to $11.70. The FCC said it anticipates some 14,800 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year, collecting $196,840 in fees from the program. Read more here <http://www.arrl.org/news/fcc-looks-to-lower-fees-for-vanity-call-signs>.

==> SECTION NEWS: NOMINATIONS OPEN FOR KNIGHT DISTINGUISHED SERVICE AWARD

Each year, the ARRL offers an award to recognize someone who has served admirably as an ARRL Section Manager. The Knight Distinguished Service Award recognizes exceptionally notable contributions by a Section Manager to the health and vitality of the League. The first such award was presented to Joe T. Knight, W5PDY (now SK) in 2003 -- for whom the award was named -- in recognition of his exemplary service not only as the ARRL Section New Mexico Section Manager for more than a quarter century, but also for his willingness to share his knowledge and skills. For information on selection criteria and how to nominate a deserving Section Manager, click here <http://www.arrl.org/news/nominations-open-for-knight-distinguished-service-award>.

==> W1AW NEWS: HELP KEEP THE W1AW DREAM ALIVE

W1AW. It is the most famous call sign in the century-long history of Amateur Radio. To hundreds of thousands of radio amateurs, W1AW is synonymous with Hiram Percy Maxim -- the visionary who first recognized a need for a national network of Amateur Radio operators in North America, and who just a few years later saw a similar need for the worldwide federation that we now know as the International Amateur Radio Union (IARU). Amateur Radio without Hiram Percy Maxim would be like automobiles without Henry Ford or electricity without Thomas Edison. Without Mr Maxim, Amateur Radio probably would not exist today -- and if it did, it would be a pale shadow of the enriching endeavor we now enjoy.

The W1AW Endowment was established to provide a reliable source of funds for the operation and maintenance of the Maxim Memorial Station. "When we begin the budget cycle every year, it is a relief to know that some portion of the expenses related to W1AW will not have to compete for scarce budget dollars with other important ARRL programs," said ARRL Chief Executive Officer David Sumner, K1ZZ. "Thanks to generous members and supporters, the W1AW Endowment and the income it generates have grown." To help ensure that Hiram Percy Maxim's memory lives on to inspire future generations of radio amateurs, please consider making a donation to the W1AW Endowment. By doing so, you will help build a solid financial future for W1AW so that it can continue to fulfill its mission as Amateur Radio's flagship station. "When you visit ARRL and tour W1AW, you will see your generosity at work," Sumner said. "And

every time you hear 'Whiskey-One-Alfa-Whiskey' on the air, you'll know that you had a part in keeping the dream alive." For information on how you can help keep the W1AW dream alive, click here <http://www.arrl.org/news/help-keep-the-w1aw-dream-alive>.

==> ARRL FIELD DAY : ARRL PUBLIC RELATIONS COMMITTEE TO HOST FIELD DAY WEBINAR

The ARRL Public Relations Committee -- in conjunction with the ARRL's Atlantic Division -- will host a "webinar" -- an interactive Web-based seminar, designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. On Thursday, April 22 at 9 PM EDT, join ARRL Media and Public Relations Manager Allen Pitts, W1AGP, along with ARRL Field Day Manager and members of the League's Public Relations Committee as they explain how to use ARRL Field Day to bring attention to Amateur Radio in your area. Learn how to set up a Field Day publicity calendar, invite elected officials and dignitaries, get proclamations issued, post your Field Day event on local media outlets and community bulletin boards, get audio and video PSAs on local radio and TV stations, how to use newer social networks like Facebook and Twitter and more to draw people to your Field Day event. Click here <https://www1.gotomeeting.com/register/932645064> to register for this informative, interactive Internet meeting.

==> ON THE AIR: MOONBOUNCE FOR EVERYONE -- COURTESY OF THE ARECIBO RADIO TELESCOPE!

Sending Amateur Radio signals to the Moon and back has never been easy. After roundtrip journeys of nearly half a million miles, even the most powerful signals generated by hams are exquisitely weak on arrival. Because of the equipment and expertise necessary for successful "moonbounce" operating, this facet of Amateur Radio generally has been confined to a small audience. But this coming weekend, even hams with very modest stations will have the opportunity to experience the thrill of moonbounce, thanks to the giant radio telescope at the Arecibo Observatory in Puerto Rico. Read more here <http://www.arrl.org/news/moonbounce-for-everyone-courtesy-of-the-arecibo-radio-telescope>.

==> SOLAR UPDATE

Tad "Though the Earth was cold and wet, the sky was clear and the Sun rose bright, placid and beautiful <http://www.literature.org/authors/dickens-charles/two-cities/book-01/chapter-03.html>"
Cook, K7RA, reports: Weakened sunspots faded away this week and we were buffeted with more geomagnetic instability, but without the dramatic geomagnetic storms of the previous week. The average daily sunspot numbers fell more than 20 points to 12.1, and the average solar flux dropped nearly three points to 75.1. April 11 saw no sunspots -- with group 1061 appearing April 5-10 -- and sunspot group 1062 showing April

12-14. By today, group 1062 should be gone and we may still see more days without sunspots. The predicted solar flux for April 15-18 is 75, 77, 78 and 79, then hitting 80 on April 19-24. The predicted planetary A index for April 15-19 is 5, 5, 12, 8 and 5. Look for more information on the ARRL Web site on Friday, April 16. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Charles Dickens' A Tale of Two Cities <http://www.literature.org/authors/dickens-charles/two-cities/index.html> (Chapter 3).

==> THIS WEEK ON THE RADIO

This week, the ARRL Rookie Roundup (SSB) <http://www.arrl.org/rookie-roundup> is April 18. The TARA Skirmish Digital Prefix Contest, the Holyland DX Contest and the EU Spring Sprint are April 17. The Michigan QSO Party, the Ontario QSO Party and the YU DX Contest are April 17-18. The Run for the Bacon QRP Contest is April 19. Next week, the 10-10 International Spring Contest, the SP DX RTTY Contest, QRP to the Field, the Florida QSO Party and the Nebraska QSO Party are April 24-25. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

353. Wash DC ham numbers. What is wrong?

Newsgroup: rec.radio.amateur.moderated
Date: 2010-04-16 01:23:49 UTC
From: ai8o <ai8o@lexcominc.net>
Message-ID: <497d0c7c-c4ce-494f-93ca-9082f206c6ce@w42g2000yqm.googlegroups.com>
Source record: 1375

The post earlier today in RRAM about the new address on the ARRL website for AR licensees piqued my interest.

I clicked -on the ARRL web page to look at the numbers.

One thing led to another, and I pulled up some state population numbers of states with roughly the same populations and compared their per-capita numbers.

Some quick numbers:

State # of hams State population Ham/resident ratio

Alaska 3466 698473 1/201
Wyoming 1696 544270 1/320
Vermont 2137 621760 1/290
Guam 487 178430 1/366
Wake Island 1 300 1/300
DC 407 599607 1/437

What I found is that there is a significant problem in Washington,DC.

There seems to be a very low number of hams in DC for the size of its population, both absolutely and per capita.
There are less hams per capita than any other state.
Even tiny Wake Island, way out there in the Pacific Ocean, has a higher ratio.

There are all sorts of people with professional degrees in DC, (lawyers, accountants,journalists,etc.)i.e. all of the chattering classes.
Why do so few of the people in DC have any interest in technical matters that would cause them to be hams?

This led me to look at the FCC Website and the Commissioners and their personal staffs' biographies.
It seems they are all lawyers of one type or another.
Not a one who has any technical or operational electronics experience.

Even the Chief of Amateur Radio Enforcement does NOT have an Amateur license.

Could this have been a significant factor in the BPL fiasco of the last few years?

This lack of technical experience or knowledge to me is a serious problem.

How can the Commissioners their staff's at the FCC ,NTIA, and other federal agencies adequately manage the nations telecommunications infrastructure if they don't have any technical experience?

What is it about DC that causes a lack of interest in technical matters?

What can be done about this problem?
Require the FCC Commisioners to hire Engineers on their staffs like one congressman is proposing?
Require FCC commissioners to have some technical experience?

WHAT????

> said that those truly blessed with the
> ability have a need to "Pass it on" (Willingness to help)

Agreed. But there's more to it than studying, A lot of things require
practice in order to do well.

> The technicial ability is a result of the willingness to study

Partly - but it also is a result of doing. "Book learning" is great
but it must be matched by practical know-how to do a radio amateur any
good.

> Respect.... Well.. We could discuss that
> some but yes, that should be

Might as well discuss it.

> As to being open to real progress.. For many decades
> we have pushed the
> progress forward.. to this day Hams still use better
> hardware than the
> military in many cases... Why.. Because hams designed it,
> not military engineers.

I think that depends on how you define "better hardware".

Military stuff has to be as rugged and dependable as possible, in all
sorts of environments including hot, cold, humid, vibration, shock,
high altitude, EMP, etc. Most ham gear doesn't have to be able to
withstand anything like the environment the military demands.

Military stuff also has to be capable of things a lot of ham gear
doesn't, such as encryption, operation from 24-28 volts DC, remote
control, ALE, spread spectrum, interconnection with other military
systems, automatic operation, etc. Often the "radio" is simply part of
a much larger system.

There's also the military requirements of documentation, training, domestic sourcing, etc.

The one place where ham gear is probably "better" is in price. But that's to be expected because the requirements are so different.

Many hams know that the WW2 BC-610 transmitter was really a repackaged Hallicrafters HT-4 amateur transmitter. Ham gear went to war!

But what's sometimes not emphasized is that they didn't just change the label on the HT-4 and make it the BC-610. What really happened is that the transmitter went through a considerable amount of testing and rework before it could meet military specifications. For example, things like vibration and shock were big issues; the original HT-4 final plate tuning capacitor simply fell apart in field tests.

And those were WW2-era requirements - modern military specifications are even tougher!

Source record: 1377

I've been to DC many times (it's only 135 miles from Philly).

Here's what I've noticed about the place:

1) Many of the movers-and-shakers don't actually live in DC. They live in VA and MD, and commute.

2) Many of those who live in DC are students, foreign nationals, etc.

3) Many of those who live in DC permanently are very poor. Crime is high and conditions are terrible.

4) DC is essentially an urban area from border to border. Even in the nicer parts it's not that ham-friendly compared to suburbs, small towns and rural areas. Urban areas tend to have a lower ham population. (How many hams actually live in Manhattan or downtown SF?

5) Regulatory agencies are usually headed by political appointees. That's the nature of the game since Andrew Jackson described the "spoils system." The FAA isn't run by all pilots; the FRA isn't run by all train drivers, etc. (In fact, if the FCC were run by hams, some might claim they had a conflict of interest).

6) There are statistical variations all over the place in the license-counts table. The difference is 2 to 1 in the numbers you cited between the highest and lowest hams-per-capita areas. Look at the table other ways and you'll see other variations.

For example, compute the percentage of hams in each state that are in each license class, and you'll see wide variations from state to state. Last time I looked, CT had the highest percentage of Extras, and CA had the highest percentage of Technicians. Other variations are all over the place.

I agree that those who make the rules should have a background in what they are making the rules for. But that sort of thing is usually left to "staff" in my limited experience.

> See the sort of bizzare fun that can be had?

Absolutely!

I would think something like this would be fairly easily done in an
Arduino or basicStamp.

The hardware would be near trivial -- get the thing some power, provide
a RS-232 driver, and a open-collector transistor to drive the sounder.

(what kind of voltage/current does a sounder want?)

You'd have plenty of spare output lines (since you only need one to drive the sounder!) so you could generate a keyed tone on another output for driving a speaker, useful once you find out why they dropped sounders like a hot rock once someone invented the BFO(grin)!

How many of the DC professionals actually live in the District? How many DC professionals interested in amateur radio choose to live in the city when it might (might!) be a lot easier to put up a decent antenna in an outlying suburb?

If you ran the numbers including both the District and ZIP codes in adjoining Maryland and Virginia, would you get something similar to the other states?

If you ran the numbers for not the entire state of Illinois, but just within the city limits of Chicago, would you get something similar to what you get for DC?

Amateur Radio Newsline(tm) Report 1705 - April 16 2010

Amateur Radio Newsline report number 1705 with a release date of
Friday, April 16th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds to a devastating
earthquake in China, more on the ham radio activation following the
Mexicali earthquake, the FCC headquarters in Washington is evacuated
due to an alleged bomb scare, GAREC 2010 to be held in Curacao and s
mid-West radio club receives accolades for its work in public service
and emergency response work Find out which club it is on Amateur
Radio Newsline(tm) report number 1705 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS RESPOND TO CHINA EARTHQUAKE

Ham radio is responding to the China's Qinghai province earthquake.
The Chinese Radio Sports Association has asked that the frequencies of
7.050 and 7.060 MHz on 40 meters be kept clear for emergency ham radio
communications following a devastating shaker that hit the provinces Yu
Shudistrict.

The earthquake measuring 7.1 on the Ritcher scale occurred on the
morning of Tuesday, April 13th. It left 589 people dead, nearly
10,000 injured and 10,000 families needing to be resettled due to 99%
of houses in the area having sustained severe structural damage.

A number of radio amateurs are already active in supporting the rescue
and recovery efforts including BG9UA, BG9UP and BG9UO. The emergency
communication team of Anhui Amateur Radio Society, led by BG6CEV was
flying to Qinghai on April 15th to bring in much needed communication
equipment.

The Yu Shu diastrict is located in a plateau with temperatures fall to
-5 degrees Celcius making conditions bad for those without shelter as
well as hampering rescue efforts.

(BA1RB - CRSA Coordinator of the IARU Region 3 Disaster Communications
Conmmittee via Jim Linton VK3PC)

**

RESCUE RADIO: HAM RESPONSE TO MEXICALI QUAKE FOLLOW-UP

A follow-up to last weeks story regarding ham radio involvement in the Easter Sunday earthquake that rattled the city of Mexicali as well as the Imperial County, California, area. Bill Pasternak, WA6ITF, is in the newsroom with the latest:

--

According to Dennis Ambrose, WB6CGJ, hams in Imperial County immediately activated an emergency net on the San Diego Amateur Radio Association's 147.15 Mhz Mt. Laguna repeater. Ambrose, who is ARRL Assistant Section Manager for Imperial County says that landline and cellular telephone phone communications were not dependable and that electrical power was out in many locations.

Ambrose says that ARES and RACES members were among the first to arrive at the Imperial Emergency Operations Center. They handeled traffic regarding damage to buildings, bridges, roads, water treatment plants, and businesses. All of this was passed via amateur radio to the county Fire Chief and the director of the county's Office of Emergency Services.

SATERN, the Salvation Army Team Emergency Network, sent in operators from the San Diego, San Bernardino and Riverside counties to assist in communications for the shelter and mobile feeding units. It activated its SATERN Net using generator power and operated from one emergency shelter were twenty seven people stayed Sunday evening. This, due to extensive earthquake damage to their apartment complex.

Ambrose says that ham radio operators remained at their duty stations through Wednesday, April 7th when the county shifted to recovery status.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom, in Los Angeles.

--

Amateur radio operators, from ARES, RACES, SATERN, the American Red Cross, the Imperial County Irrigation District as well as individual hams not affiliated with any group took part over the three and a half days of emergency activation. There's s till no word from south of the border as to whether hams in Mexico were called out in response to this quake. (AD6VI, ARNewsline(tm))

**

RADIO THREAT: FCC EVACUATED DUE TO BOMB THREAT

A threat leads to the evacuation of the FCC's Washington headquarters. Norm Seeley, KI7UP, has the details:

--

The Federal Communications Commission was evacuated Wednesday, April 7th. This after what news sources report as an apparent bomb threat that forced staffers to outside the building in 90 degree heat for over two hours.

The building known as The Portals is located in Southwest Washington. It was evacuated around 9:30 a.m., according to FCC spokesman David Fiske. He said employees returned to the building around 11:30 a.m.

Throughout the afternoon, speculation in the media mounted that the FCC headquarters was evacuated because of a bomb threat. Details about the nature and timing of the threat were unavailable, though one source said staff was out for about two hours and that bomb-sniffing dogs were dispatched.

Fiske did not confirm that a bomb threat was the cause of the evacuation and referred inquiries to the Federal Protective Service. E-mail releases from the commission resumed mid-afternoon.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

According to the newsletter T V Business, bomb threats in Washington, D.C. are something of a regular occurrence. It notes a WTOP report that the Pentagon City Metro station was shut down briefly April 3rd for such a threat. Another was reported at World Bank headquarters in January. (RW, The Hill)

**

RESCUE RADIO: GAREC-2010 DATES ANNOUNCED

The Global Amateur Radio Emergency Communications Conference, or GAREC, will be held in Curacao, in the Netherlands Antilles on the 11th and 12th of October. The annual conference is for those engaged in providing emergency communications with this years theme being "Learning Through Practicing.".

The overall purpose of Global Amateur Radio Emergency Communications Conference is to exchange information and experiences between radio amateurs and groups interested in emergency communications. This years is gathering is being organized by the Dutch Amateur Radio Emergency Service and the IARU Netherlands Antilles national radio society VERONA.

The program is yet to be finalized however the organizers are keen to include first-hand accounts of emergency communications following the devastating Haiti and Chile earthquakes. More is on line at www.garec.net (VK3PC)

**

RADIO HONORS: LINCOLN CLUB HONORED

The Lincoln Amateur Radio Club has received the Nebraska Volunteer Group of the Year Award. This, at the Nebraska Impact Awards Luncheon in Omaha on, Friday, April 9th.

The award to the Lincoln Amateur Radio Club comes only about two weeks after it responded to a major telephone outage that affected south east

Nebraska. That story also was well covered by local, statewide and national press as wel as here on Amateur Radio Newsline.

The Lincoln Amateur Radio Club's Jeff Bennet, W&#65533;WKP, and ARRL Lancaster County Emergency Coordinator, Reynolds Davis, K&#65533;GND, were present to accept
the award. (K0AIZ)

**

RADIO LAW: FCC WANTS AUTHORITY TO LOWER VANITY FEE BY 10 CENTS

Still with FCC news, word that the regulatory agency has released a Notice of Proposed Rulemaking and Order seeking to lower the fee for Amateur Radio vanity call signs by 10 cents. Currently, a vanity call sign costs $13.40 and is good for 10 years. If the FCC's new fee structure is approved the new fee will go down to $13.30 for 10 years.

According to the ARRL, over the 13 years of the current program, the vanity call sign fee has fluctuated from a low of $11.70 in 2007 to a high of $70. The latter as first proposed in the FCC's 1994 Report and Order. In 2007, the Commission lowered the fee from $20.80 to $11.70 but its slowly been creeping upward ever since

The vanity call sign fee is payable both when applying for a new vanity call and also when renewing it for a new term. The FCC said it expects to receive some 14,800 amateur radio vanity call sign applications during the next fiscal year and collecting $196,840 in fees under the program.

MD Docket 10 dash 87 carries a commentary cutoff date of May 4th. Reply comments are due no later than May 11th. Instructions on how to comment on this or any other FCC action is available on the FCC Web site at http://www.fcc.gov/cgb/consumerfacts/howtocomment.html (FCC, ARRL)

RADIO LAW: FCC GRANTS DALLAS TEXAS AREA 97.113 WAIVER REQUEST

The Federal Communications Commission has granted a Part 97.113 waiver request by Mark Fulmer, KE5PHU, who is Preparedness Coordinator the Tarrant County Public Health Department in Dallas, Texas. This, to use hams employed by the agency in several upcoming bio-terrorism preparedness drills.

Scot Stone is the Deputy Chief, of the Mobility Division of the FCC's Wireless Telecommunications Bureau. In granting the request Stone wrote that the public interest is served in facilitating the April 16, May 21, June 18, July 16, August 20, September 17, October 15, November 19, and December 17 public safety exercises and thus warrants this limited waiver of Section 97.113(a)(3). The waiver permits Fulmer and a dozen other named hams to take part in these monthly drills. (FCC)

THE BPL WAR: MANASSAS VA TO END BPL SERVICE JULY 1

It's a big victory over QRN. This with word that the once highly touted Broadband over Powerline experimental project in Manassas. Virginia, will soon be no more as the Manassas City Council votes to discontinue the service as of July 1st. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The Manassas City Council's action came soon after the Manassas Utilities Commission recommended it do so. Even with all of the pre-publicity it had received, BPL in Manassas proved to be what is best described as a flawed business plan. While the basic concept of using existing utility lines to also transmit broadband data seemed good at the outset, it never really gained a favorable level of subscribership. By the time the vote to discontinue the service came, BPL in Manassas was only serving about 560 residents and businesses.

In its report to the City Council, the Manassas Utilities Commission said that the total revenue brought in by BPL for the current Fiscal Year was only about $186,000. On the other hand, the expense of keeping up the city owned system was costing the ratepayers more than $351,000. This resulted in a net loss of almost $166,000 to keep the system in operation.

The July 1st termination date was chosen to give current BPL subscribers about three months to switch to other Internet Service Providers. Since its inception, the BPL system has been a thorn in the side of hams and SWL's in Manassas by raising the overall noise floor of most of the high frequency bands, and making all but the strongest radio signals impossible to hear.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.

--

The Manassas decision to shut down its BPL system tends to prove once again what critics in the financial world have been saying for years. That being Broadband Over Powerline may look good on paper but in the world of finance it really is a flawed business plan. (ARRL)

**

RADIO POLICY: FCC CITES IPAD AS ANOTHER REASON FOR BROADBAND SPECTRUM

The FCC is using the high level public response over the release of Apple's iPad to put in a plug for finding more spectrum for wireless broadband use. In a blog posting on April 2nd, the FCC's chief spectrum policy analyst, Phil Bellaria teamed with deputy Wireless Bureau Chief John Leibovitz to pointed to the long lines at Apple stores as evidence that broadband is going mobile fast and in a big way.

According to Belllaria and Leibovitz, more and more Americans seemingly do not want to be tethered to a desktop computer or even a laptop. They want a light mobile device they with which they can curl up on the sofa with to watch an online movie, stow in a backpack for subway reading, or pass around the office with the latest vacation pictures. Belllaria and Leibovitz say that the broadband connections that enable this flexibility are wireless and points out the need for more spectrum for mobile broadband that the FCC has identified in the National Broadband Plan.

They point out that many of the iPads currently rely solely on WiFi to connect to the Internet. They said that the FCC should know before long what the impact of the iPad will have on spectrum use. (Published Reports)

**

RADIO LAW: RAC FILES FOR 60 METER CANADIAN ALLOCATION

Radio Amateurs of Canada has filed a request with telecommunications regulator Industry Canada for some 60 meter spot frequency assignments. The formal request was sent to the Director, Spectrum and Radio Policy, for consideration in authorizing for the Canadian Amateur Service the same five 5 MHz frequencies that are now authorized in the United States. In addition, two spot frequencies are also requested for exclusive Canadian amateur use.

The ground work for this was established at previous meetings of the Canadian Amateur Radio Advisory Board Radio Amateurs of Canada anticipates this request will go through a lengthy due process of analysis and review at Industry Canada before being published as a Canada Gazette Notice for public comment. If all goes well, Canadian hams could see an authorization to this spectrum within a year. (VE3LC)

ON THE NET: ARRL LAUNCHES NEW WEBSITE

The newly redesigned ARRL website is up and running and those visiting it have given it a big thumbs up. Still located in cyberspace at www.arrl.org, the new look makes navigating the site a breeze while at the same time striking what appears to be an almost perfect balance between content and advertising.

Among the most welcome changes are the click-to buttons at the very top of the page. A single mouse click navigates the user to such topics as Licensing, Technology, a Membership area and much more. In all there are eleven instant access buttons including one to bring you back to the suites home page.

A welcome carry over from the old ARRL web design was the decision to keep the latest news right on the home page as headlines. To read more you just click on the story and the full text appears almost instantly.

The new website was more than two years in the masking. Rather than our trying to describe it, you really need to visit it yourself. Just take your web browser to www.arrl.org and then click around. (ARRL)

EMERGING TECHNOLOGY: FIRST SOLAR ONLY POWERED D-STAR SYSTEM ON THE AIR

What's believed to be the worlds first and only D-Star solar powered repeater has come on the air from Belgium. According to the Royal Union of Belgian Radio Amateurs the ON0CPS system was recently put into operation by ON4BK and is designed to operate entirely on solar energy.

The new D-Star repeater operates with an input channel of 431.9625 MHz with its output on 439.5625 MHz. According to the society, during the day there is usually enough sunlight to keep the machine in operation while simultaneously charging its two 120 Amp Hour batteries which power it at night. So far the repeater has been running over a month on this solar power alone with no failures or complaints.

More is at the ON4BK website located at http://tinyurl.com/yyajoxx (UBA)

WORLDBEAT: AUSTRALIA ANNOUNCES DTV REPEATER WITH STEREO AUDIO

Australia now has a Digital Amateur Television repeater that has full stereo audio. The VK3RTV repeater on Mt Dandenong which services the Melbourne and Geelong areas now has dual channel sound on both its digital and analog inputs. About seven stations transmitting digital DVB-S uplink have the capability to transmit stereo sound through the machine. Peter Cossins VK3BFG advises that experiments are also being conducted with Internet streaming with the British Amateur TV Club in the UK. (VK3BFG)

**

WORLDBEAT: SECOND AFRICAN WSPR BEACON TAKES TOM THE AIR

The second beacon using the new WSPR mode has gone on the air in Africa. Using the callsign 5X7JD the system is located in Masaka, Uganda and outputs 1 watt while cycling through 80, 40, 30, 20, 17, 15, 12 and 10 meters. This gives an overall cycle between WSPR transmissions returning every 16 minutes to a given band.

The beacon is composed of an embedded system based on a PIC microprocessor, a Direct Digital Synthesis chip and a MOSFET Power Amplifier with selectable filters all feeding a HyGain Av 18VS multi-band vertical

antenna. Time and location information are derived from an attached GPS receiver. You can read more about the station at www.hamradiosafari.com. (GB2RS)

**

HAM RADIO IN SPACE: AO-51 GOES SEMI-CTCSS

In ham radio space related news, Amsat Oscar 51's transmitter on 435.150 has been turned off and the 435.300 transmitter power output has been raised to near 2 watts output. Also, on Saturday, April, 10th the new continuous tone access routine was turned on. This cycle will turn the downlink on with an unsquelched uplink when it hears a 67 hz tone. The plan is to leave a squelch tail of several minutes, so the transmitter will stay on without hearing a tone for an interval of several minutes.

What does this mean for the average satellite user? First, if would be advisable to program in a 67 hz CTCSS tone if your radio supports tone access, but not absolutely required as long as someone else in the footprint does. It also means if you are the first person in the footprint you might not hear the satellite until after it hears 67hz for a few seconds. Reports from when the downlink turns on or off would be appreciated and go to ko4ma@amsat.org. (KO4MA)

**

HAM RADIO IN SPACE: ESTONIA TO LAUNCH HAM RADIO CUBE-SAT

The University of Tartu, in Estonia, has submitted a frequency coordination application to the IARU for an Amateur Radio CubeSat. Called ESTCube-1, the tiny bird would be a Low Earth Orbit satellite with UHF downlinks and a VHF telecommand uplink. It would also carry a camera to acquire images of Estonia for and will deploy a 10 meter conductive tether as a part of the development work of an electric solar wind sail. The projected launch for ESTCube-1 would be in 2012 although no launch opportunity has yet been confirmed. More on this Estonian ham radio in space project is on-line at http://tinyurl.com/yk66s2o. (ANS)

**

ON THE AIR: WIA CENTERIARY QRP CONTEST

Turning to the world of radiosports, the VK QRP Club will sponsoring a low power contest during May, This, to commemorate the Centenary of organized amateur radio in Australia.

All three grades of Australian license holders can join this one, provided they limit their output power to five watts CW and 10 Watts for AM and SSB. The contest will be on the 80 and 40 meter bands.

More details and the contest rules can be found on the Wireless Institute of Australia's website. Its in cyberspace at www.wia.org.au. (WIA)

**

ON THE AIR: CELEBRATING MORSE ARGENTINA

And members of the Grupo Argentina de CW will be active from Morse in Buenos Aires Province to commemorate the town's foundation birthday. The operation will take place from 1500 UTC on May 7th to 2000 UTC on May 9th. More details are on line at gacw.no-ip.org (LU1DZ)

**

DX

In DX, word that F5UOW, will stay on Reunion island through May 2nd. He will be active only on 20 meters signing portable FR until April 17th. He will then change his location and will show up as TO2R mostly in CW on 80 through 10 meters. QSL cards should be sent direct or via bureau to his home callsign.

ND9M is active as VQ9JC from Diego Garcia for the next four months. He reportedly prefers CW but also works in SSB and some of the digital modes. He also hopes to get the special call VQ90JC by the end of May in time for the CW portion of the WPX Contest. QSLs go to ND9M either direct or via the bureau.

SP2JMB is reportedly on Maritius signing 3B8SC. His operation is Morse only and he's expected to be operational through April 21st. QSLs via SP2JMB.

UA9YAB says that he plans to arrive in Mongolia on May 25th and will be operating all band mobile until June 2nd as JT9YAB using simple antennas and an emphasis on 50 MHz. If all works out as planned he will be find a location for a second trip for this fall focused 160 and 80 meter operation. QSL via UA9YAB direct only.

Lastly, here's one of those of you who hunt DX only on the bands above 50 MHz. I-2-S-V-A says that he will be active in late April and early May portable I-S-0 from Sardinia's grid square J N 40 U U using 2 meter weak signal modes. Hi operation will focus Meteor Scatter on April 24th and 25th. SSB and CW will take place on May 1st and 2nd. QSL I2SVA at his call book address.

(Above from various DX news sources)

**

THAT FINAL ITEM: PRODUCER DAVE BELL W6AQ LOOKING FOR FILM COPY OF "THE HAMS WIDE WORLD"

If you are old enough to remember back to when movies in school classrooms and on television were shown on film, then you also may remember that most non theatrical movies were shot and distributed on 16 millimeter film. Almost all of the early movies about ham radio were photographed on 16 millimeter including the 1969 Dave Bell, W6AQ, classic titled "The Hams Wide World."

Well Dave would like to restore that move and several others but so far no really decent prints of "The Hams Wide World" have been found. The only projectable one located so far is very faded. A video transfer done some 25 years ago used a film print that was severely scratched. A few months ago the ARRL was contacted to see if they might have a viewable print but none could be found.

Well, when "The Hams Wide World" went into distribution back about 40 years ago, it was a loan out program from what was then the ARRL Film Library. Its estimated that there were two to three dozen copies of "The Hams Wide World" in circulation, and in the off chance that one or two never got returned to League headquarters, we are turning to all of you. Especially any old timers who were responsible for getting programs for radio club meetings back in the early to mid 1970's. .

Perhaps you borrowed a copy of "The Hams Wide World" and forgot to send it back. Maybe its still sitting in your attic, closet or basement. If you do happen to have such a film print, Dave would love to borrow it for the restoration process.

You can contact Dave Bell, W6AQ, by e-mail to dbamovies@aol.com. He says that he would sincerely appreciate your help. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I suppose the next thing to do is look for a good simulator that runs on
Linux.

The power requirements of sounders depend on the ohm ratings of the
coils, which is usually stamped somewhere on the sounder. The lower the
ohms, the lower the voltage requirements. Some modern things need to be
done like adding more resistance so it won't be too sluggish. Also a
pair of zeners back-to-back is recommended to prevent something (I
forget what).

Another thing I'll need to use a few lines for would be some means of
varying the output speed. Yes, an alternate output could ride along for
free. Perhaps also a relay to go to the key input of a radio.

Another thing is that telegraph "lines" might indeed be a single wire..
Using the Ground as the "Return" for the loop

This was often done both for telegraph and for mains electrical at one
time due to a shortage of metal for the wires... This is very likely why
house systems have a ground bonded to the neutral at the service
entrance AND AT THE POLE.. At one time they simply forgot to use a neutral.

Plus I"ve seen several "Loop" systems today where a single wire is
looped from the "Central office" out to each "node" or station and all
the way back.. One such was made by Phillips back in 1980.. I used to be
one of the operators (This was a telephone system) the finished product,
I used to joke, had one part that NEVER FAILED... That was a reset
button... The original failed and the replacement came from Radio Shack.

Correct. While Washington DC is a district, for all intents and
purposes, it is a city, just like Philadelphia or New York.

And in line with what Jim had said, I'm actually surprised that there
are some many hams per non-hams.

I can under stand that there are relatively many hams in places like
Alaska. They live a lot closer to the edge of disaster than most of
us, and there's only so much infrastructure you can put in in some of
the more remote areas.

Wake Island might think about recruiting another Ham or two! 8^)

That is what I get for being a Science Major.. I consider "Doing" (LAB)
to be part of the "Studying" (Lecture hall) process. (IN short agreed)

>> The technicial ability is a result of the willingness to study
>
> Partly - but it also is a result of doing. "Book learning" is great
> but it must be matched by practical know-how to do a radio amateur any
> good.

There is a story... And you are looking at the end result of it as you
read this.

The story is a Professor had a bright idea.. How to make analog devices
(Vacuum tubes) work in a DIGITAL fashion (Could this be the first
computer circuit... Yes, it was.. I told you you were looking at the end
result)

Well, he put his A+ Lab assistants on the job and they quickly hit a wall

Then his A, A-, B+, B, B-

Well to make a long story short he got down to a "C" student.. Now this
student knew the book forward, backward, and sideways, but he also knew
what worked (A fiction note follows) and thus he tended to answer test
questions with what worked, rather than what the book wanted.

You see. He was a Ham Radio Operator and he had tested the theory.

He also had a working digital gate within six months.

The fiction note

In the world of Star Trek there is a book, If I don't mangle the title
too much It is Kobashi Maru (The "No win" test at the academy) And I
believe it's written by the lovely and talented Julia Ecklar (Yes, I
know her)

If you can snag a copy read Scotty's chapter where he talks about his
time in command school.. Normally engineers do not go to command school
but... Scotty .... Is different.

> So that is how it should be tabulated

Depending on how and what the statistics are used for. If you are the F.C.C., you have to count the grace period licenses. You might want to separate them out, but the policy is that they don't reassign them for two years. There's good reasons for that, how many of us have forgotten to get our cars inspected once in a while. Any rate, they aren't in the business of punishing a mistake with having to go through the licensing process again.

When we keep a count, the important thing is that we are consistent. Then we see trends, and to me, the trend is the important thing.

The trend is after the expected drop-off in the early years of this century, (note 1) there was an increase in the number of Hams in recent years. There was a shift in which a lot of Hams upgraded to Extra. We also got a lot of new Hams via interest in emergency Ops. These were largely, but not all, Technicians.

That's pretty much the trends I see.

note 1. The expected drop-off was most likely the result of a large group of inactive Technicians declining to renew their licenses. This was a group who were licensed in the early 1990's who used Ham radio as a sort of communications line home to figure out if they needed to stop off at the grocery store to get bread or pick up the kids after soccer practice.

After the ascendency of Cell phones, these people by and large migrated over to cells, because it served their purpose better. At that point, they became inactive. When I first became a Ham in the late 1990's, there were a few local Hams left who still did this. But over the next couple years, they all disappeared. And at least in my area, the Hams who didn't renew their Technician license were the ones

who used Ham radio for that purpose.

Jeff,

I started with the <$20 MFJ brass straight key. Good adjustment span. Set the contact space with a business card. Make sure you remove the telegraph short bar or set it right. Office friends pitched in and got me a Bencher RJ2 for retirement. It's all I use now. Retail $155...discounted <$130.

Probably the reason you never got the answers is there probably are only opinions. Straight vs. bug. vs paddles? Reality does have top speed capable is with the iambic paddles, but is top speed best means of communication? I've known straight key users to send consistently >35 wpm. They use those speeds with others of like ability. Remember, you have to copy at/near the speed you send, so being able to blaze away with an iambic paddle at 60-70 wpm means you expect to copy from the lone ham out there at the same rate.

90% of my CW contacts are <20 wpm; most around 15. That seems to be about average copy ability for information QSOs.

Our CW group of 6 has 5 paddlers and 1 straight. My now-SK CW Elmer could move between paddle and straight for SKNs (straight key nights). He expressed that it is easier to learn on paddle and move later to straight keys -- but that was his opinion. Most contests pass rudimentary information and you develop a pattern of copying and sending based on the contest info. Often you are copying a recorded 'macro'.

It is my understanding that many of them were. Besides the savings in wire and insulators, a ground-return system could actually be lower resistance than a double-wire system if the "made grounds" at the ends of the lines were very good.

Of course such a line is more vulnerable to noise, but since the wire telegraph was a digital system the nouse would have to be considerable to have any effect.

Who was the Professor and where was he?

(here follows a digression)

The reason I ask is that I've seen and put my paws on parts of ENIAC -
the world's first fully operational high speed, general purpose,
Turing-complete, electronic digital computer. All modern computers are
descended from ENIAC.

Yes, there were other machines that try to claim the title. But they
all lack one or more of the characteristics of ENIAC.

For example, some early machines were part mechanical and part
electronic. Some were never fully operational, or only became fully
operational long after ENIAC. Many were special-purpose machines,
built to do one thing rather than being general-purpose programmable
systems that were Turing-complete. Many were not high-speed, using
line frequency for the clock.

About the only serious competition ENIAC has is the British Colossus
machine. But because of extreme secrecy, Colossus did not have any
direct descendants, while ENIAC did, leading to the first UNIVAC. I'm
not sure if Colossus was Turing-complete, either.

> You see. He was a Ham Radio Operator and he had tested the theory.

Another story:

Some years back there was a documentary about the development of the proximity fuze during WW2. The challenge was to build a small radar set - with tubes, antenna, battery, etc. - into an artillery shell. The problems involved were immense, considering that the fuze would have to survive the shock of being fired, the spinning of the flight, and still work when it got to the target. It would also have to not detonate falsely, and work without maintenance after months or years of storage and transport.

One of the managers of the project said that what worked best in the development was to pair a theoretical scientist, usually a physicist, with a ham. The physicist would do the theoretical; the ham would do the practical. The proximity fuze was developed and manufactured in the millions during the war.

I will look for the book. Kobiashi Maru IIRC.

I don't think that all the High muckey-mucks have to be all Pilots or
Train drivers, but in the FCC's case there should be one or two that
have day to day operational expererience in electronics.
Even the commisioners' staffs do not have practical experience
according to their biographies on the FCC website.

It's even more urbanized than Philadelphia, IMHO. (I've spend
considerable time in both cities).

I think you meant "so many hams...". I suspect that many of them are
temporary transplants (students, for example).

> I can under stand that there are relatively many hams in places like
> Alaska. They live a lot closer to the edge of disaster than most of

I don't think Alaskans are "much closer" to the edge of disaster than
most of us. However, I bet they do have fewer restrictions on
antennas.

And for longer than I've been a ham, there's been the special Alaskan
emergency frequency. Might be more than a few folks who got ham
licenses just to use it.

There are probably a lot of factors that influence the number of hams
per-capita, and what they do. For example, Florida has lots of hams -
and lots of retirees.

You got it.. If, every time, they only count ACTIVE (or valid) licenses, and do not count "Grace Period" licenses... Then it matters not that they don't count them.

But if they count them one time and not the next (Or the other way around) that would throw things off big time.

What bothers me is the small numbers.. I'd like to see bigger numbers

I have no idea,, In fact it's been long enough I can't even tell you
where I read the story (May have been QST, may have been another Radio mag)

I do know it's been a long time since I read the story.

Speaking of QST, and Thread drift,, Did you see the article in the April
QST on Digital Antennas.

At least they were UP Front about it.

(If anyone wonders about that article... IT's the April edition)

I'm not surprised to find that there are many hams in DC

Many of the folks who list DC addresses are folks who have worked hard
to get there, They are wise and they are interested in public service.

Does this not describe ham radio operators? (Well many of us)

The qualities overlap nicely

> might claim they had a conflict of interest).

Actually it is amazing the number of agencies that ARE run by hams.. Or perhaps not so amazing when you consider a few things about Hams.

But the fact is many CEO's in many companies are hams.. Because the kind of dedication it takes to study, not all that long ago code, plus the law, and technical questions, these days even rocket science. The kind of dedication it takes to pass that EXTRA CLASS license test.

Is the very kind of dedication that they look for when they hire a new CEO or appoint a new department head.

And hams have that kind of dedication.> Otherwise they'd be CBers or SWL's or... Mundanes (A term we use in another of my hobbies)

Now.. I can tell you one origination you may wish to look at, IN fact I'll describe two The American Diabetes Assn, and the Juvenile Diabetes Research Foundation.

ADA is run mostly by Doctors, Nurses and other medical professionals.. They spend the majority of their funds on diabetes education teaching diabetics (Such as myself) how to better manage our condition. This is good work.

But when Diabetes is ever cured.. They will be out of work

JDRF is run by either Type 1 Diabetics or by parents of Type 1 Diabetics.. Now, when diabetes is ever cured they too are going to be out of work.

But where the ADA folks will be "Woe is me, I'm out of work" the JDRF folks won't have time for Woe cause they are going to be planing and putting on the party to end all parties.. Cause the Dragon Mellitus (DM, get it) has been well and truly slain!

The moral.. Some outfits are indeed run by the right people,, People who have a very strong interest in seeing the company meet it's goals.

Agreed.

I jes turned 62 and am studying like crazy for my element 2 and 3
license. Got a Kent key and practicing that, too. DZkit told me I
was lucky to get a piece of the new shipment of Kent keys cuz there's
been an unexpected run on them. Since the discontinuation of cw
requirement, they say interest is WAY up. Go figure.

That thing about noise reminded me of a story about a severe magnetic
storm that happened in the 1880s or thereabouts. Currents induced into
telegraph lines were so strong that things caught fire in telegraph
offices as well as simply knocking them offline.

This is SPAM.
I don't know how newsline got the idea these courses are free.

I went to the URL go.bluevolt.com/CoBrandTemplate/home.aspx?brandï¿½co
that was cited.

These courses are NOT free.
They seem to individually cost about what a Community College would
charge for continuing education courses.

Another advantage of Ham Radio.... I have spoken to folks in places
where FaceBook, Twitter and Cell phones..... Well, they never heard of
them at least not in their town. And that is under "Routine" conditions.

Now when things go south.... Well.... As my T-Shirt says "When all else
fails... HAM RADIO"

I suspect you folks know where to buy the shirt (ARRL Store)

Friend of mine hooked a very high impedance volt meter to his long wire
antenna one storm and got some very interesting voltmeter readings

Several volts (As in 3 digits) as I recall.. Of course it did not take
much current to ground it out but it was amazing the amount of voltage
on that wire.

My Long wire is DC-Grounded so I don't see that.

Voltage spikes, which could kill the driver. I don't really have a
handle on the magnitude of the current involved in running a sounder,
but I think you'd almost certainly want some kind of driver stage (a
transistor or two, depending on the current requirements) between the
microcontroller and the sounder. Spike protection would be part of
that circuit.

Arduino has analog inputs which could be connected to a potentiometer
for varying the Morse speed.

>abound!

They do acknowledge that it's not complete, and offer help finding stuff.
But then you have to wait for an answer....

Worse, it's just plain harder now (for me, anyway) to find things. For
example, Product Reviews are under the Technology tab (I discovered that
after finally entering "product reviews" in the site's search box, upper
right), and then you are grateful that ARRL Laboratory is the first section,
because only the first section is open, and in it you can (finally) see the
text title "Product reviews and test results." If Product Reviews were
elsewhere you'd never find it. Well, you'd find it eventually....

I'm not happy about the results of this reorganization. But no one asked me
to participate in the "focus group."

Howard N7SO

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

388. moving the front mic jack around

Newsgroup: rec.radio.amateur.moderated
Date: 2010-04-22 06:41:46 UTC
From: davidmylastname@acm.org
Message-ID: <hqor35$j9f$1@frotz.eternal-september.org>
Source record: 1310

As I approach the point when I'm ready to get an HF rig, I thought I'd get some answers now. One thing that bugs me is to have cables sticking out very near knobs and buttons. I see on most, if not all, HF rigs the microphone jack is like that. I would like to tap the microphone jack lines and run them to a new jack installed on the rear. Is this sort of thing advisable?

Kenwood TS-2000 has two AUX ports on the rear,, Mulit-pin DIN plugs..
ONE of them is normally used for computer interface for digital
communications.

The pins on that port include:
Main audio out (Received audio on the main transceiver)
Sub audio out (You can figure that out)
Microphone in.. A genuine mic-level audio input
PTT.. Just like the one on the front jack but with a twist.

And as I recall a couple of other things. (I'm not looking at the
diagram just now)

The twist: If you ground the front panel PTT jack, or press the SEND
button in an audio mode, then the FRONT audio in (MIC-IN) is selected
and audio at the rear port is ignored.

If you ground the REAR PTT jack.. then audio from the FRONT jack is
ignored and rear input is selected.

Finally... I have no problem with the mic cable sticking out the front..
The only knob truly near it is "Audio Filter low frequency cut off
adjust" and I can do that with HRD or, Usually just leave it at the
minimum (100hz) setting. I do use the high frequency cut off adjust
(One farther right)

You could also make a right angle adapter to point the cable DOWN and
out of the way (or in the case of the TS-2000 off to the left)

That is fairly common when a new page debuts... Alas, one would wish
that they would fully test it but as you know one of Murphy's laws is:

It is impossible to make anything foolproof, because as soon as you do
nature will invent a better fool

Murphy, you know, was a woman.. Yes, a woman. Ask if you need proof

Check the specs on the various radios. Some rigs have back panel jacks for mike and key as standard equipment. My Icom IC-746 has key jack. My Icom IC-706MKIIG has a mike and a key jack. Both were purchased new in the 1999-2001 time frame.

As to modifying a rig to add mike and/or key jacks to the back panel, that all depends on how much eletronics experience you have. You might run into stability and/or noise problems running the wires past HF, IF or digital circuits in the rig. At the very least, you'd void your warranty.

==> HAMVENTIONï¿½: EXPERIENCE THE ARRL EXPO AT THE DAYTON HAMVENTION

<http://www.arrl.org/arrl-expo-at-2010-dayton-hamvention> On May
14-16, hams from all over the world will make their way to the Hara
Arena, located in Trotwood, Ohio for the 2010 Dayton Hamventionï¿½. Held
annually since 1952, Hamvention is one of the largest Amateur Radio
gatherings in the world, and as we have been doing since 2005, the ARRL
will bring the ARRL EXPO -- a showcase of ARRL exhibits and activities
that celebrate the very best of Amateur Radio -- to thousands of radio
amateurs. ARRL staff will also present a number of exciting,
interactive forums throughout Hamvention weekend. Read more here
<http://www.arrl.org/news/experience-the-arrl-expo-at-the-dayton-hamvention>.

==> HAMVENTIONï¿½: DAYTON HAMVENTION ORGANIZERS ANNOUNCE FORUM SCHEDULE

<http://www.hamvention.org> One of the many highlights at Dayton
Hamventionï¿½ -- sponsored by the Dayton Amateur Radio Association (DARA)

-- is the myriad of educational and fun forums that take place the entire weekend at Hara Arena. DARA has coordinated 43 unique programs that encompass nearly 80 hours of programs and activities for the thousands of people expected to attend these programs. Hamvention, the largest event of its kind, will be May 14-16 at Hara Arena in Trotwood, Ohio. Please keep in mind that the schedule may change before Hamvention. Read more here <http://www.arrl.org/news/forum-schedule-announced-for-2010-dayton-hamvention>.

==> ARRL WEB SITE: FIND YOUR WAY AROUND THE NEW ARRL WEB SITE

By ARRL News Editor S. Khrystyne Keane, K1SFA

When the new ARRL Web site launched on April 13, we received an overwhelming, enthusiastic response to it. But along with that, we have also received a few questions on how to find certain features on the new site. Click here <http://www.arrl.org/news/find-your-way-around-the-new-arrl-web-site> for a quick guide to find some of the more popular features, such as the ARRL Periodical Archive Search and Logbook of The World, on the new ARRL Web site.

<http://www.arrl.org/images/view/News/ForgotPassword.JPG> Have you forgotten your password? You can easily get a temporary password by clicking on the "Forgot Password? <http://www.arrl.org/forgot-password>" link, located directly under the log-in box at the top of the page (see photo). You can either request a temporary password via e-mail (you must use the e-mail you originally used to register for the previous ARRL Web site), or you may retrieve a temporary password immediately by providing your user name (for hams, this is usually your call sign) and your ARRL member ID number (found on your QST mailing label). You must also provide either your call sign or your last name. Click here <http://www.arrl.org/forgot-password> to receive a temporary password.

<http://www.arrl.org/images/view/News/YourFavorites.JPG> We have also received inquiries regarding the "Favorites" function on the new Web site. Once you successfully log in to the Web site, you will see a drop-down box that says "Your Favorites" right underneath your name (see photo). Go to any page on the new ARRL Web site. Would you like to find it in just one step? The "Your Favorites" feature will do just that! When you are on the desired page, just click on the "Your Favorites" drop-down menu, click "Add to Favorites" then click the "Go" button. Now you have stored that Web

<http://www.arrl.org/images/view/News/YourFaveSignIn.JPG> page as one of your favorites; each time you wish to go to that page, you can just access it through the "Your Favorites" drop-down menu (see photo).

Of course, with a project as large as the new ARRL Web site, there are still some bugs to be worked out. Our IT Department is busy fixing

them, so please know that we are trying to solve these problems as quickly as possible.

==> FCC NEWS: ARRL FILES REPLY WITH FCC OVER RECONROBOTICS' OPPOSITION TO LEAGUE'S PETITION FOR RECONSIDERATION

Following the ARRL's March 24 Petition for Reconsideration of the FCC's grant of a waiver to permit the operation of a robotic video device in the 430-450 MHz band, ReconRobotics filed an Opposition to the ARRL's Petition, declaring that, among other things, the ARRL did not follow proper procedure when submitting it. On April 16, ARRL General Counsel Chris Imlay, W3KD, filed a reply, asking the Commission to "reconsider, rescind and stay the ReconRobotics waiver and the effectiveness of the Order" in accordance with the ARRL's Petition for Reconsideration. Read more on the ARRL's reply here <http://www.arrl.org/news/arrl-files-reply-with-fcc-over-reconrobotics-opposition-to-league-s-em-petition-for-reconsideration>.

==> ARRL FOUNDATION AWARDS PRESTIGIOUS GOLDFARB SCHOLARSHIP TO KYLE EBERSOLD, KB1MNN

The Board of Directors of the ARRL Foundation proudly awarded the 2010 William R. Goldfarb Memorial Scholarship to Kyle Ebersold, KB1MNN, of Holland, Massachusetts. Kyle is a senior at Tantasqua Regional High School in Fiskdale, carrying a 4.31 GPA. He was first licensed in August 2005, holds a General class license and is a member of several Amateur Radio organizations including the ARRL, the Hampden County Radio Association and FISTS. He operates SSB, CW and PSK31 with most contacts on 17, 20, 40 and 80 meters. Kyle's interest in ham radio began in December 2004 when he received an SWL radio as a gift. Inspired by stories from his grandfather -- who operated in the 1960s as a Novice -- Kyle was bitten by the bug! He plans to attend Bryant University in Smithfield, Rhode Island where he will pursue studies in business. Applications for the Goldfarb Scholarship and other ARRL Foundation Scholarships are accepted each year beginning October 1 and ending February 1 for the academic year that starts the following August/September. Read more here <http://www.arrl.org/news/arrl-foundation-awards-prestigious-goldfarb-scholarship-to-kyle-ebersold-kb1mnn>.

==> ARRL PUBLICATIONS: QEX -- THE MAY/JUNE ISSUE

The May/June issue of QEX is coming soon, and it is full of theoretical and practical technical articles that you won't want to miss. QEX is the ARRL's "Forum for Communications Experimenters." Published bimonthly, it features technical articles, columns and other items of interest to radio amateurs and communications professionals. The mission of QEX is threefold: To provide a medium for the exchange of ideas and information among Amateur Radio experimenters; to document advanced technical work in the Amateur Radio field, and to support efforts to advance the state of the Amateur Radio art. QEX is edited by Larry Wolfgang, WR1B. Subscribe to QEX today. Read more here

<http://www.arrl.org/news/qex-the-may-june-2010-issue>.

==> SOLAR UPDATE

Tad "The early mist had vanished and the fields lay like a silver shield under the Sun <http://www.americanliterature.com/Wharton/EthanFrome/10.html>" Cook, K7RA, reports: A haunting specter from the past -- a Sun with no spots -- returned this week. As of Wednesday, we've seen seven days with no spots, a quiet Sun unseen since early December. A spot may be emerging in the solar northeast quadrant, and NOAA and USAF predict a rising solar flux of 76, 78, and 78 for April 22-24, followed by 80 for nine days, so perhaps this will turn around. Look for more information on the ARRL Web site on Friday, April 23. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Edith Wharton's Ethan Frome <http://www.americanliterature.com/Wharton/EthanFrome/EthanFrome.html> (Chapter 8).

==> ARRL FIELD DAY : ARRL PUBLIC RELATIONS COMMITTEE TO HOST FIELD DAY WEBINAR

The ARRL Public Relations Committee -- in conjunction with the ARRL's Atlantic Division -- will host a "webinar" -- an interactive Web-based seminar designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. On Thursday, April 22 at 9 PM EDT, join ARRL Media and Public Relations Manager Allen Pitts, W1AGP, along with ARRL Field Day Manager Dan Henderson, N1ND, and members of the League's Public Relations Committee as they tell you how to use ARRL Field Day to bring attention to Amateur Radio in your area. Learn how to set up a Field Day publicity calendar, invite elected officials and dignitaries, get proclamations issued, post your Field Day event on local media outlets and community bulletin boards, get audio and video PSAs on local radio and TV stations, how to use newer social networks like Facebook and Twitter and more to draw people to your Field Day event. Click here <https://www1.gotomeeting.com/register/932645064> to register for this informative, interactive Internet meeting.

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/multimedia> This week, the 10-10 International Spring Contest, the SP DX RTTY Contest, QRP to the Field, the Florida QSO Party and the Nebraska QSO Party are April 24-25. The SKCC Sprint is April 28. Next week, the Microwave Spring Sprint (local time) and the AGCW QRP/QRP Party are May 1. The 10-10 International Spring Contest (Digital), the 7th Call Area QSO Party, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party are May 1-2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest

Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> W1AW NEWS: W1AW OFFERS CODE PRACTICE, BULLETINS VIA ECHOLINK

Audio from W1AW's CW code practices and CW/digital bulletins is now available using EchoLink via the W1AW Conference Server "W1AWBDCT." The 9:45 PM ET phone bulletin is currently unavailable via W1AWBDCT. The audio is sent in real-time and runs concurrently with W1AW's regular transmission schedule <http://www.arrl.org/w1aw-operating-schedule>. According to W1AW Station Manager Joe Carcia, NJ1Q, this server is currently at an experimental stage: "Since the server is located at ARRL -- and uses the ARRL's Internet connection -- there may be an issue as to how many users can connect to W1AWBDCT via EchoLink. The current number of connections is set to 350. If the current system can properly handle these connections without adversely affecting the performance of the conference server, this number will be bumped up higher." All users who connect to the conference server are muted. Please note that any questions or comments should not be sent via the "Text" window in EchoLink. Please send any questions or comments via e-mail <w1aw@arrl.org>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Antenna Design and Construction; RF Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1706 - April 23 2010

Amateur Radio Newsline report number 1706 with a release date of
Friday, April 23rd, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams are true first responders at a
landslide in Rio de Janeiro, the volcanic eruption in Iceland delays an
IARU meeting, two new ham radio organizations are announced at the
International DX Convention in California and 800 attend a ham radio
reception at NAB in Las Vegas. All this and more on Amateur Radio
Newsline(tm) report number 1706 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: HAMS RESPOND TO RIO STORMS AND LANDSLIDE

Ham radio operators in Brazil responded to the recent emergency caused
by severe rainstorms in the region near Rio de Janeiro. Bill
Pasternak, WA6ITF, is in the newsroom with the details:

--

According to Marcio Ribeiro, PY1RJ, director of Teaching for the Brazilian
Amateur Radio League, beginning on Tuesday, April 6th a group of ham radio
volunteers went on duty. This, to assist in communication between the
people of Rio and the citys public agencies.

Ribeiro says that days of rain caused a landslide for which radio amateurs
became what amounts to true communications first responders. He says
that some 10 hams immediately set up a network with each having a specific
duty. One was assigned the fire department, another for the Civil Defense,
yet another for the Military Police, and so on.

The major ham response was to the landslide where at least one home was
completely destroyed. On his way to that location PY1RJ warned two police
cars about the slide and the overall danger in the area. Ribeiro remained
at the disaster site as both a communicator and rescue volunteer.

M�rcio Chehab, PY1MNC was also the landslide site. Chehab, who maintains
of
electronic equipment, helped by calling ambulances from hospitals in the
region. He also kept in contact with radio amateurs in other cities who in
turn were in communications with relief agencies.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

In all, there were about 30 hams involved in this rescue radio response. Those outside the area helped by maintaining a ham radio communications infrastructure that included radio, the internet and telephones.
(G1, Southgate)

**

RADIO POLITICS: ICELAND VOLCANO CANCELS IN PERSON IARU REGION 1 MEETING

The volcanic eruption in Iceland has disrupted an International Amateur Radio Union Region 1 Executive Committee meeting slated for April 17th and 18th in Sofia, Bulgaria.

The IARU Region 1 website reports that many participants at the yearly meeting were unable to reach Sofia from various parts of the world. This, due to flight restrictions and cancellations caused by the volcanic ash at the altitudes commercial passenger jets fly.

In the end only five delegates were able to reach the meeting site. The rest are either stranded at a transit airport or were on the way back home by any possible means possible.

The gathering did finally take place, but by on-line web conference on Sunday April 18th. (IARU Region 1)

RADIO POLITICS: NEW WORLD WIDE RADIO OPERATORS FOUNDATION ANNOUNCED

There is a new player on the ham radio political and educational scene with the goal of improving the skills of amateur radio operators around the world,. This, by utilizing education, competition, advancement of technology and scientific research to promote international friendship and goodwill. It also wants to help prepare hams to better serve society in times of communication need. These are the lofty goals of the World Wide Radio Operator's Foundation, Inc. and it has the backing of some of the heaviest of the true heavyweights in the hobby. Amateur Radio Newsline's Norm Seeley, KI7UP, has the whose' who in this new game in town:

--

Although it was founded quietly back in 2009, the World Wide Radio Operator's Foundation, Inc. or WWROF was officially launched on Friday, April 16th at the 61st International DX Convention held in Visalia, California. And the groups Board of Directors reads like a whose-who in the world of amateur radio.

According to its leadership, the World Wide Radio Operator's Foundation was
created with the goal of advancing the skill and art of radio operating. The group's mission statement states that it is dedicated to improving the skills of amateur radio operators around the world, utilizing

education, competition, advancement of technology and scientific research, promoting international friendship and goodwill, and preparing them to better serve society in times of communication need. The World Wide Radio Operator's Foundation further believes that on-the-air contests provide a good test of operating skills and are of immeasurable value to amateur radio overall.

The groups is made up of a group of well-known and very highly respected DX'ers, contesters and public service operators. This includes Chairman Doug Grant, K1DG; Vice Chairman John Dorr, K1AR; Treasurer Ralph Bowen, N5RZ and Secretary Tom Lee, K8AZ. Other board members are Bob Cox, K3EST; Tim Duffy, K3LR and Mark Beckwith, N5OT.

In addition, the organization has an Advisory Committee that includes Ken Wolff, K1EA; George Fremin, K5TR; Randy Thompson, K5ZD; Trey Garlough, N5KO; and Larry "Tree" Tyree, N6TR.

Among other things, the group says that it intends to support high impact operating-oriented projects. These include training activities and content, contest administration improvements, recruitment programs for new contesters and deployment of state-of-the-art technologies for enhanced log checking or simply improved awards programs. They also plan on establishing an equipment donation program for young contesters and those radiosports oriented hams residing in third world nations.

In looking at the overall structure the World Wide Radio Operator's Foundation appears to have adopted some of the finer points of organizations like that of the Radio Club of America, the Quarter Century Wirerless Association, major DX and contest groups and even the ARRL and put them all under one roof. Its then added an emphasis on High Frequency radiosports as an operational training ground. The only questions are will this approach succeed and if it does, what will its long term affect be on the overall hobby.

The World Wide Radio Operator's Foundation is incorporated as a non-profit organization in the state of Ohio, and is pursuing tax-exempt status under Section 501(c)3 of the Internal Revenue Code so that donations made to it will be tax-deductible.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale

--

More information about the World Wide Radio Operator's Foundation can be found at www.wwrof.org. (WWROF release)

**

RADIO POLITICS: NEW HAM RADIO ANTENNA LITIGATATION ASSISTANCE ORGANIZATION FORMED

Radio amateurs involved in the struggle to secure reasonable accommodation for amateur radio antennas have formed a new California public-benefit corporation. This, to receive tax-deductible donations from those wishing

help support litigation against local jurisdictions that ignore federal and state preemption statutes.

Chief Financial Officer Marty Woll, N6VI, announced at the recent International DX Convention that the Amateur Radio Antenna Defense Foundation, or ARADF, has been approved by the Internal Revenue Service as a public charity under Section 501(c)(3). This means donations to it are tax deductible.

According to Woll, turning to the courts can be prohibitively expensive for the radio amateurs while cities have taxpayer-funded attorneys on staff, giving them the upper hand. The goal of ARADF is to help level the playing field with financial assistance that will allow deserving antenna lawsuits to go forward.

It should be noted that the ARRL has a committee that has helped fund antenna litigation around the country, but it focuses primarily on cases that have reached the appellate level. The new organization will concentrate on lower-court cases. Its web site is currently under construction. (ARADF)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AA6DP repeater of the Catalina Amateur Repeater Association serving the Southern California coastline from 26 miles across the sea.

(5 sec pause here)

**

ENFORCEMENT: OFCOM ACTS AGAINST SCOTLAND REPEATER JAMMING

Jamming of Central Scotland's repeaters has brought enforcement action from UK telecommunications regulator Ofcom. Jeramy Boot, G4NJH, is in Nottingham with more:

--

Following the ongoing jamming and abuse problems on a number of Central Scotland FM Group repeaters, a meeting has taken place between Ofcom, the repeater group and the RSGB to discuss options to address the problem.

Ofcom has indicated that the problem is under active investigation and as a result enforcement action has been taken against one individual resulting in the forfeiture of equipment and a number of others being warned of their conduct.

The investigations are still ongoing and Ofcom has asked that any evidence of abuse is in the first instance forwarded to GM8HBY to co-ordinate information rather than create duplicate reports.

Ofcom have also reminded repeater users not to respond to any abuse or jamming heard on the repeaters.

I'm Jeramy Boot, G4NJH

--

It appears that bringing repeater jammers to justice in the British Empire may be a lot swifter than over here in the USA. (GB2RS)

**

ENFORCEMENT: FCC ASKS ARRL TO INSTRUCT OO'S ON 14.275 MHz ISSUE

The ARRL at the request of the FCC has issued an advisory to all of its Official Observers regarding the situation on and near a specific frequency in the 20 meter band. In his note to the OO's, Chuck Skolaut, K�BOG, who is the Leagues Field & Regulatory Correspondent wrote and we quote:

"Laura Smith at the FCC has asked me to relay the following information regarding 14.275 and what you may be hearing. She wanted all OO's to be aware of what is happening.

"There is quite an interesting situation developing at 14.275 and the surrounding frequencies. For some reason, a Canadian operator has elected to play a recording of a conversation that took place back in 2006 between him and another licensee -- N1FM. Brian Crow (K3VR) was not involved in that conversation -- although the Canadian licensee is currently trying to ascribe the comments of N1FM to Brian. Again let me reiterate, Brian Crow, K3VR, was not involved in that conversation back in 2006." -- End quote.

Skolaut's statement was first published in the newsletter of the Official Observer Coordinator Ohio Section edited by Rick Swain, KK8O. The Canadian station in question was not identified in the message to the Official Observers.

The original statement is on-line at http://www.arrl-ohio.org/ooc/feb-2010.html (ARRL OHIO Official Observer Website)

**

ENFORCEMENT: FCC ISSUES $25000 TO PHONEJAMMER.COM FOR U.S. SALES

The FCC has notified a United Kingdom-based firm known as notified Phonejammer.com of its Apparent Liability for Forfeiture in the amount of $25,000. This, for marketing in the United States of radio frequency devices designed to intentionally interfere with licensed cellular and Personal Communications Services.

Phonejammer.com was originally issued a Citation by the FCC after it discovered instances where businesses in the United States were found using the devices. In both cases the sale of the items was traced directly to the Phonejammer.com website. In its reply to the citation, Phonejammer.com through its attorney claimed that it does not market to the United States,

and has not shipped or distributed units to the United States. This despite the fact that the FCC has receipts from Phonejammer showing that such purchases were made.

In affirming the fine the FCC said that regardless of what Phonejammer may claim, the evidence clearly demonstrates that on at least two occasions within the past year, Phonejammer has sold and shipped phone jamming units to individuals in the United States. One was bought by an individual in Carrollton, Texas on April 21, 2009 and the other by an individual in Port St. Lucie, Florida on September 24, 2009. Both purchases were made through the Phonejammer.com website and that Phonejammer shipped both devices to addresses in the United States.

Phonejammer.com was given the customary 30 days to pay the fine or to file an appeal. (FCC)

**

THE SOCIAL SCENE: 800 ATTEND NAB HAM RADIO RECEPTION IN LAS VEGAS

The Ham Radio Reception at this years National Association of Broadcasters Convention in Las Vegas, Nevada is reported to have been an overwhelming success. Over 800 hams turned out for the gathering held Wednesday evening April 14th at the Las Vegas Hilton Hotel.

About $14,000 in door prizes handed out this year. In addition to ham radio suppliers several broadcast and industrial suppliers such as Harris and Eimac came through with prizes as well. Perhaps the biggest in sheer size was a tower from Universal tower valued at $3500.

This years ham radio reception was again hosted by Heil Sound Ltd. and Broadcast Supply Worldwide. The latter is better known by its initials of BSW. (ARNewsline(tm))

**
THE SOCIAL SCENE: N6R FROM THE REAGAN LIBRARY FOR FIELD DAY 2010
And for the tenth consecutive year, the callsign N6R will operate as a Field Day station from the grounds of the Ronald Reagan Presidential Library and Museum in Simi Valley, California. This, to commemorate the lives of President Ronald and Mrs. Nancy Reagan.
Joining the Ventura County Amateur Radio Society which is the primary organizer will be a number of other local groups. These include the Amgen Amateur Radio Club. The Conejo Valley Amateur Radio Club the Simi Settlers Amateur Radio Club and the Ventura County Amateur Radio Club. And a late addition is the Hollywood Hills QRP Contest Club with be joining this year as well.
N6R will operate from 1800 UTC on June 25th to 1800 UTC on June 27th with up to 16 stations on all of the High Frequency bands. Also look for the N6R call on the VHF and UHF bands from 6 meters on-up using many modes including fast-scan ATV and satellite operations.
If you are lucky enough to make contact with N6R this year, please QSL with an Self Addressed Stamped Envelope to VCARS, in care of Peter Heins, N6ZE, 1559 Norwich Ave., Thousand Oaks, CA, 91360 (N6ZE, W6AQ)

**

HAMVENTION NEWS: NEW DISCOVER HOMEBREW DEMONSTRATION AREA

The Dayton Hamvention and the Midwest VHF/UHF Society have teamed up to host the first ever Discover Homebrew demonstration area at Hamvention 2010.

Located in booths 179, 180, 191, 192, and booths 203, 204, 215, and 216 in the North Hall, there will be 6 eight foot tables available to accommodate many homebrewers and their gear simultaneously. The Hamvention will provide AC power along with H-F and possibly VHF antenna access. All you need to do is bring your favorite home built project, set it up and demonstrate it to anyone who is interested.

This demonstration area will operate on an open schedule basis. This means that you can be there when you want for as long as you want, space permitting. A sign-in sheet will be provided where you can record your project description, contact information and times you will be providing a demonstration.

The only restriction is that no sales of these demonstration items will be permitted as a courtesy to paying exhibitors. However, if you have commercial plans for your project, it is fine to go ahead and talk about them.

More about this and other Hamvention happenings is on line at www.hamvention.org. (Dayton Hamvention)

**

NAMES IN THE NEWS: HEIL SOUND NAMES SARAH HEIL ITS NEW PRESIDENT

Some names in the news. First up congratulations to Sarah Heil, the wife of Heil Sound Ltd. Chief Executive Officer Bob Heil, K9EID, on her being named company president.

Sarah Heil holds two degrees from McKendree University in Lebanon, Illinois. She began working at Heil Sound in Informatioin Technology in 1999 and has played in increasingly active role in the company's activities ever since.

No stranger to the company's workload and business philosophies, she can often be found in the shipping department helping to meet deadlines for product delivery. She is also a very visible face of the company at trade events. Because of this she has gained industry wide respect from dealers and customers alike.

Heil Sound Ltd. was founded as a sound reinforcement specialty company by Bob Heil back in 1966. It has since evolved into one of the worlds leading manufacturers of cutting edge technology dynamic microphones for live sound, recording and two-way communications. In her new role Sarah Heil will oversee all aspects of Heil Sound's financial management as well as the company's long-term strategies. (RW)

**

NAMES IN THE NEWS: RSGB HONORS BATH BUILDATHON HAMS

The Radio Society of Great Britain has awarded the Kenwood Trophy for outstanding contribution to amateur radio training to the Bath Buildathon event and the follow-up DVD that its sponsors have produced. All six of the Bath Buildathon crew received certificates of merit for their part in this special event. To date, over 60 copies of the DVD have been sent out across the U-K and abroad. The award presentation took place at the RSGB's recent Annual General Meeting. (GB2RS)

WORLDBEAT: HAM TO WALK ACROSS AUSTRALIA - AGAIN

The ham who once walked Australia North to South is planning to do it again. But this time Jeff Johnson VK4XJJ plans to go across that nation. Trevor Tage, VK4BT, has more from down-under:

--

Well Jeff has another little walk planned but this time it is from east to west! right across Australia!!

The Royal Flying Doctor Service has approached Jeff to complete this huge fund-raising walk on their behalf. They will be providing support along the way and the Gympie Communications & Electronics Group will be Jeff's official East Coast Amateur Radio contact station.

The walk is being planned to commence early April 2011. With anticipated radio and TV coverage, 'Jeff's Walk' will once again raise money and awareness for a good cause and help to promote and demonstrate Amateur Radio.

--

One thing you can be sure of is that ham radio will once again be an important part of VK4XJJ's long distance walking odyssey. (WIA News)

**

HAM HAPPENINGS: ARMAD 2010 ON MAY 29

ARMAD an acronym for Amateur Radio Military Appreciation Day is slated for this coming May 29th. Amateur Radio Military Appreciation Day is a chance

for hams to show their support for the United States men and women stationed world wide in defense of our nation, its citizens and our liberty. Information for sites near you planning to take part in Amateur Radio Military Appreciation Day can be found at www.armad.net/eventinfo.htm. Questions and comments go to event planner Emery McClendon, KB9IBW by email to armad07(at) yahoo dot com. (ARMAD)

**

WORLDBEAT: SAVE ANALOG RADIO CAMPAIGN BEGINS IN THE UK

A ham radio magazine in the United Kingdom wants to try to halt that nations transition to all digital radio broadcasting. VK2LAW, has the details:

--

A UK National Campaign to maintain traditional analogue broadcast radio for everyday listening and for use in times of national emergencies is trying to spring up.

The pressure is on to replace traditional analogue radio broadcasting with Digital Audio Broadcasting (DAB) radio. Indeed, the UK Government has provisionally set 2015 as the date when the world wide standard frequency modulation services are to disappear from 87.5 to 108MHz in the v.h.f. f.m. band), to be replaced with DAB radio transmissions. Eventually, the analogue services on long waves at 198 kHz and medium waves from 500kHz to 1.6MHz will also be replaced by digital transmissions.

If you do want to know more you can contact Rob G3XFD, oh and Rob is actually Dr. Rob B Mannion the Editor of Practical Wireless magazine.

I'm Jason, VK2LAW.

--

For those not aware, Practical Wireless is Great Britain's best selling independently published amateur radio magazine. (WIA News)

HAM RADIO IN SPACE: AMSAT DEVOTES SECOND AO-51 REPEATER TO SCOUTING

AMSAT North America says that AO-51 is now running two FM repeaters to support contacts by the Boy Scouts celebrating their 100th anniversary this week. The second repeater's uplink is 145.88 with a downlink on 435.150 MHz. Its available primarily for Scouting stations but when not in use by the Boy Scouts, other low power stations are welcome. AMSAT defines low power as 10 watts or less, and uplinking using omnidirectional or handheld antennas only.

Meantime, the main repeater on AO-51 is still open for general traffic and the 67 Hz tone access testing continues. That uplink: 145.920 MHz and downlink at 435.300 MHz for general contacts. Both orbital repeaters operate narrowband FM. Please see http://www.amsat.org/amsat-new/echo/CTNews.php for the latest AO-51 Control Team News. (AMSAT)

ON THE AIR: EURPOES EURODAY ON THE AIR FROM SPAIN MAY 1 - 20

On the air, listen out for the special callsigns AO1EU, AO2EU, AO3EU, AO4EU, AO5EU, AO6EU, AO7EU, AO8EU and AO9EU between May 1st to the 20th. This, to commemorate the 60th anniversary of Robert Schuman's presentation of his proposal for the creation of what is now known as the European Union.

The activity is organized this year by Spains EA Digital Federation under the auspices of the European Radio Amateurs' Organization. All bands and all modes will be used. A special QSL card will be available only via EuroBureauQSL at www.eurobureauqsl.org. (Southgate)

**

DX

In DX, word that G5XW will be active from Malta as 9H3XW between June 12th to the 19th. His operation will be on the H-F bands using SSB with no set times or frequencies. QSL via his home callsign, direct only.

And listen out for VK6DXI to be active as 9M8DX/2 from Kuala Lumpur between April 20th and the 23rd and the 26th to the 29th. In between he will operate from Tioman Island between April 24th and the 26th. His activity will be focused on 30, 17 and 12 meter CW. QSL via SP5UAF, either direct or via the bureau.

RD3AF says that he will be on from the Canary Islands from May 29th to the 30th for this years CQ World Wide WPX CW Contest. QSL via UA3DX.

IW1PRT will be active from Liechtenstein portable HB0 between April 30th and May 1st. He usually operates on 160 through 10 meters including the WARC bands. QSL via his Manager IZ1MKR
via EURAO Bureau.

Lastly, W2LPL will be active from Antigua as V26LPL between April 26th and the 30th on 20 meters using 100 watts. QSL via W2LPL.

(Above from various DX news sources)

THAT FINAL ITEM: SHOCK ABSORBER POWER SUPPLY

And finally this week, imagine being able to power your radio gear and recharge your car's battery with power derived from your auto's shock absorbers. Well its more than a pipe dream as we hear from Amateur Radio Newsline's Frank Haas, KB4T:

--

In a recent study, mechanical engineers from the State University of New York designed and tested a retrofit regenerative shock absorber that recovers a vehicle's vibration as energy. The researchers built a small scale prototype of the regenerative shock absorber, and demonstrated its ability to harvest 2 to 8 watts of power during typical driving conditions. This, at a speed of about 45 mph.

The researchers predict that a full-scale system on a four-wheel car should be able to recover up to 256
watts under real world driving conditions. They also believe the ability to harvest approximately 64 watts per wheel will increase considerably when the system is used on irregular or poorly paved roadways.

For the Amateur Radio Newsline. I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

In their research the scientists also discovered that the power regenerated by this system is proportional to the square of the magnetic flux across the coils in the shock absorber system. Consequently, increasing the flux by a factor of two quadruples the peak power output. More on this discovery is on line at
http://iopscience.iop.org/0964-1726/19/4/045003/ (Elektor E-Magazine and WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard

Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm David Black,
KB4KCH, saying 73 and we thank you for listening.

My point is not a matter of degree, but that urban areas often have less Hams than we might think. In the PAQSO party, Philadelphia is a rare county. When you get to the more suburban areas around it, there are a lot more hams. It's a rough estimate due to being a specific activity.

Ratio, like 300 non hams for each 1 ham.

That I'd have to disagree with. Many Alaskans are pretty close to the edge. We don't have to get food and supplies brought in by snowmobile or bush pilot. There was a case I read about where a snowmobile brigade was formed to ferry fuel oil to a remote village so that the inhabitants could survive through the winter. The coastal areas are not too bad, but you get inland and it can be pretty scary. When I was in Juneau, I hiked on some trails that went by tunnels that were sent through the mountains for the miners to get to their work in the winter. They weren't mining in the tunnel, it was drilled to protect the miners. A mining company wouldn't spend money on a luxury like that unless it had to.

That Ham radio license can be a real lifesaver up there.

And rural areas tend to have a higher ratio of hams. A case in point is Pahrump, NV, where I live. 35,000 population spread over a valley 10 miles wide by 20 miles long, in the middle of the desert. Most housing lots are 1.25 acres with little or no CC&Rs. (*) The nearest nearby towns are at least a half hour away. According to qrz.com, there are 322 ham licenses (not counting the 4 club licenses) with Pahrump in their address. That's a ratio of 1 to 109.

Nationally, according to http://www.arrl.org/fcc-license-counts there are 689,553 ham licenses in the USA. According to http://www.census.gov/main/www/popclock.html the USA population is 309,145,162, for a ratio of 1 to 448.

(*) My house is in a development which covers a quarter of the town, and my CC&Rs (written 30 years ago) do not even mention antennas and towers, just things like setbacks. And the CC&Rs are scheduled to expire in a couple of years.

We are engaged in an active effort to make new hams here, including holding free-of-cost classes for those who are interested. I run the local VE team. Last Saturday, we had 11 candidates, nine got new Technician licenses, and one upgraded to Extra. Last month, we held a month-long study program for upgrade to General. In the VE session that followed, we had 14 candidates, most of whom passed. In January, we had a one-half-day study program for Technician (commonly called a cram). At the following VE session we had 10 candidates, and all passed.

Whenever someone passes an exam, I give to him/her a tri-fold pamphlet. One side says "Congratulations. We know you have questions. Call on any of us for advice and for help raising antennas." I.e., we are offering to be Elmers. The other side of the pamphlet describes our local ARES/RACES organization and invites them to join. About a quarter of them do join ARES/RACES.

I remember when I visited Alaska years ago that there sure seemed
to be a lot of hams. I just ran the numbers for Fairbanks and it's
about 1 in 70. For Talkeetna, it's about 1 in 7.5.

So much better a definition.

I've always been uncomfortable at the "real" definition, or whatever
is left for those who do not measure up.

Which is why I'm a proud Second class operator, #891 as are you, #291

Yes, this is by far the best definition I've seen so far.
Without all the other "But they don't know how to..." stuff.

Better in what way?

I don't know of any amateur equipment, including the latest $10K stuff from
the JA engineers, which is as capable or durable as the most basic military
communications equipment.

Hans,

What's your take on the "MIL-STD 810" compliance of some Yaesu gear?

See:

http://en.wikipedia.org/wiki/MIL-STD-810

For example:

VX-5R 50/144/430 Triple-Band Heavy Duty FM Transceiver:

http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&DivisionID=65&ProdCatID=111&encProdID
=CD3B6BACCEAD8F8C402AA08D8CCC2517

FT-2600M Heavy-Duty VHF FM Transceiver:

http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=106&encProdID=FD1C26E2CD5DC
E104D1F139A21F13BA6&DivisionID=65&isArchived=1

FT-600 Compact High Performance HF Transceiver:

http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=102&encProdID=CBD475D266058F06201E3D7650623464&DivisionID=65&isArchived=1

==> HAMVENTION®: DX ACTIVITIES ABOUND AT ARRL EXPO AT DAYTON
HAMVENTION®

ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N,
reports that plans for a plethora of DX activities at the ARRL EXPO --
part of the 2010 Dayton Hamvention -- are wrapping up. "We are excited
about the activities that will be taking place," he said. "Visitors to
the EXPO will see a lot of activities relating to DX, including DXCC
card checking, a chance to drop off QSL cards for the ARRL Outgoing QSL
bureau and even an expanded International Amateur Radio Union (IARU)
area." The Dayton Hamvention will take place May 14-16 at Hara Arena,
located near Dayton, Ohio. Read more here

vention>.

==> FCC NEWS: FCC SEEKS COMMENTS ON NEWLY PROPOSED RULES FOR AMATEUR
RADIO OPERATORS AND EMERGENCY DRILLS

<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf>
In March, the FCC released
<http://www.arrl.org/news/fcc-issues-notice-of-proposed-rule-making-on-govern
ment-disaster-drills-and-amateur-radio>
a Notice of Proposed Rulemaking (NPRM
```

<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf>)
(Docket #10-72) that proposed to amend the Part 97 rules --
specifically 97.113(a)(3) -- governing the Amateur Radio Service. The
new rules would provide that, under certain limited conditions, Amateur
Radio operators may transmit messages during emergency and disaster
preparedness drills, regardless of whether the operators are employees
of entities participating in the drill. On April 22, a summary of the
NPRM was published in the Federal Register
<http://edocket.access.gpo.gov/2010/pdf/2010-9092.pdf> and the FCC is
seeking comments on it. Comments must be filed on or before May 24,
2010 (30 days after publication in the Federal Register); reply
comments must be filed on or before June 7, 2010 (45 days after
publication in the Federal Register). Instructions on how to file
comments are listed beginning on page 5 of the NPRM
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf>.

==> LEGISLATIVE ACTIONS: MORE SUPPORT FOR HR 2160

Last week, two more Congressional Representatives -- Greg Walden,
W7EQI (R-OR-2) and Jeff Fortenberry (R-NE-1) -- pledged their support
for HR 2160
<http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&doc
id=f:h2160ih.txt.pdf>,
The Amateur Radio Emergency Communications Enhancement Act of 2009,
bringing the total number of cosponsors to 39, including original
sponsor Sheila Jackson-Lee
<http://www.arrl.org/news/houston-representative-introduces-amateur-radio-bil
l-in-congress>
(D-TX-18). HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael
Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), Jo Bonner, (R-AL-1), John
Boozman (R-AR-3), Madeleine Bordallo (D-Guam), André Carson (D-IN-7),
Geoff Davis (R-KY-4), Bob Filner (D-CA-51), Scott Garrett (R-NJ-5),
Bart Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey
(D-NY-22), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Ron
Klein, (D-FL-22), Tom Latham (R-IA-4), Zoe Lofgren (D-CA-16), Blaine
Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Michael E. McMahon,
(D-NY-13), Cathy McMorris Rodgers, (R-WA-5), Charlie Melancon (D-LA-3),
Candice Miller (R-MI-10), Dennis Moore (D-KS-3), John Olver (D-MA-1),
Bill Posey (R-FL-15), Denny Rehberg, (R-MT), Dana Rohrabacher
(R-CA-46), Aaron Schock, (R-IL-18), Bennie Thompson (D-MS-2), Michael
Turner (R-OH-3), Peter Welch (D-VT), David Wu (D-OR-1), C.W. Bill Young
(R-FL-10) and Don Young (R-AK). On the Senate side of Capitol Hill, S
1755
<http://www.arrl.org/news/senate-introduces-companion-bill-to-hr-2160>
-- also called The Amateur Radio Emergency Communications Enhancement
Act of 2009 -- cleared the Senate
<http://www.arrl.org/news/amateur-radio-bill-passes-senate-moves-to-the-house
>
by unanimous consent in December 2009 and now sits in the House
Committee on Energy and Commerce. Click here
<http://www.arrl.org/sample-letters> for information on how to

encourage your Congressional representative to sponsor HR 2160.

==> THE DOCTOR IS IN: WINDOW LINE AND COAX LOSS

Andy Anderson, AE5EA, of Placitas, New Mexico, has an old three band, three element quad that was built by a company no longer in business. This quad was designed to be fed with coax to a 1:1 balun. Andy told the ARRL's Doctor that he plans on putting the quad back up and was wondering if he can feed it with 450 Ω window line to avoid the loss in over 180 feet of coax.

Here's what the Doctor had to say:

There are two approaches that should work with the window line (assuming the feedpoint's impedance is 50 Ω -- a quad is typically a bit higher).

- Feed the driven element directly with the window line. At the station, you will then need a wide range antenna tuner that can match balanced loads. This could be a regular unbalanced one with a balun on the output. Note that the impedance will be neither 50 nor 450 Ω, but will vary widely due to the transformation through the mismatched line, which will be different on every band. The 9:1 SWR with 180 feet of typical window line will result a bit less than 1 dB loss at 28.5 MHz and 0.67 dB on 14 MHz.
- Use a 9:1 balun at each end of the window line. You may want to use coax (with a coil choke) from the antenna to below the rotator. Then attach a balun (waterproof units are available or you can build your own). Run the window line to (or near to) the station and use another 9:1 balun and coax to the radio. The two baluns combined will have less than 1 dB loss. The matched window line will have 0.2 dB additional loss on 14, 0.26 dB on 28 MHz.

· Use a 9:1 balun at each end of the window line. You may want to use coax (with a coil choke) from the antenna to below the rotator. Then attach a balun (waterproof units are available or you can build your own). Run the window line to (or near to) the station and use another 9:1 balun and coax to the radio. The two baluns combined will have less than 1 dB loss. The matched window line will have 0.2 dB additional loss on 14, 0.26 dB on 28 MHz.

Another thought is to use really good coax. 180 feet of LMR 400 or Belden 9913 coax, for example (both fit standard UHF connectors), will have a matched loss of 1.2 dB at 28.5 MHz, but only 0.8 dB on 20 meters. While not cheap, it probably will cost less than the window line plus two baluns. A section of special "LMR Flex 400" can be used around the rotator.

The performance differences among the various approaches are small. If I were starting from scratch, I think I'd go with low loss coax, based on simplicity and ease of operation.

Thanks Doctor! Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST <http://www.arrl.org/qst> , the official journal of the ARRL.

==> MORE IMPROVEMENTS TO THE ARRL WEB SITE

<http://www.arrl.org> As more and more people use the new ARRL Web site <http://www.arrl.org/>, we are finding some minor bugs in the system and fixing them. Here are the latest improvements to the Web site:

- A link to your Section News is located right underneath the "Edit Your Profile" link at the top of the page. Just click on "Section News" and you will be directed to the appropriate page. This link is only available on the home page of the site.
- Users no longer have to log in each time they access the Web site. The site now remembers your log-in information and you will automatically be logged in on each visit.
- The DXCC standings and Honor Roll <http://www.arrl.org/dxcc-standings>, DXCC application <http://www.arrl.org/files/file/DXCC/dxccapp.pdf> and the DXCC order form <http://www.arrl.org/files/file/DXCC/dxccitem.pdf> are now available online.
- You can now register hamfests and conventions <http://www.arrl.org/hamfest-convention-application> on the Web site.
- Find an Amateur Radio licensing class <http://www.arrl.org/find-an-amateur-radio-license-class> or an exam session <http://www.arrl.org/finding-an-exam-session> near you. In earlier versions of the Exam Session Locator Service, all exam sessions were listed as "no walk-ins." This has now been fixed.
- An amateur's current license class is now listed in the Call Sign Search <http://www.arrl.org/fcc/search>. Extraneous numbers in the amateur's FRN have also been removed.

<http://www.arrl.org/images/view/News/SectionNews.JPG> "With a Web site as large as the ARRL's, we are constantly making improvements and changes," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "We have received a lot of feedback from members and are trying to implement many of these ideas. One of our main goals at the moment is optimizing the club search function. We also understand that the Web site search function is not as functional as we would like. In time, once the Google engines crawl through the site and catalog it, the search function should greatly improve. We appreciate your patience and understanding as we work through the issues."

==> ARRL PUBLICATIONS: CHECK OUT THE MAY/JUNE ISSUE OF NCJ

The May/June issue of NCJ, The National Contest Journal, is filled with the latest news from the contesting world. Whether you are new to contesting or are a seasoned pro -- or somewhere in the middle -- you will find something in NCJ just for you. In addition to the

contest-related articles, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles" by Don Daso, K4ZA; "Contest Tips, Tricks and Techniques" by Gary Sutcliffe, W9XT; "VHF-UHF Contesting" by Jon Jones, N0JK; "RTTY Contesting" by Don Hill, AA5AU; "Propagation" by Carl Luetzelschwab, K9LA; "Contesting on a Budget" by Ralph Bellas, K9ZO; "Software for Contesters" by Pete Smith, N4ZR, and "Contesting 101 "by Kirk Pickering, K4RO. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. NCJ is what every contester needs in their shack -- subscribe today! Read more here <http://www.arrl.org/news/check-out-the-may-june-issue-of-em-ncj-em>.

==> SOLAR UPDATE

<http://sdo.gsfc.nasa.gov/gallery/firstlight/> Tad "The sunlight struck them with an ever-varying rainbow bloom as they moved <http://arthursclassicnovels.com/doyle/lostw10.html>" Cook, K7RA, reports: After 13 days of no sunspots, new region 1063 appeared late on Wednesday, April 28. Unknown at this point (early Thursday) is how strong or fast-growing this new sunspot region will be. Earlier region 1062 was only with us for three days, April 12-14. Look for more information on the ARRL Web site on Friday, April 30, including some e-mails about the European ash cloud and the possibility that 72 MHz propagation was depressed because no aircraft were in the sky. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Sir Arthur Conan Doyle's The Lost World <http://arthursclassicnovels.com/doyle/lostw10.html> (Chapter 15).

==> THIS WEEK ON THE RADIO

This week the Microwave Spring Sprint (local time) and the AGCW QRP/QRP Party are May 1. The 10-10 International Spring Contest (Digital), the 7th Call Area QSO Party, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party are May 1-2. Next week, the FISTS Spring Sprint is May 8.The CQ-M International DX Contest and the VOLTA WW RTTY Contest are May 8-9. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, May 23, 2010, for these online course sessions <http://www.arrl.org/online-course-registration> beginning on Friday, June 4, 2010: Amateur Radio Emergency Communications Level 1; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the

CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

> Hans,
>
> What's your take on the "MIL-STD 810" compliance of some Yaesu gear?
>

Good marketing. MIL-STD 810 related to shock, vibration, salt spray, etc.
It is unrelated to any "performance" criteria.

The HT's involved probably have their design roots in a military contract
which required that level of durability, so crediting the testing into their
COTS product offering is good marketing practice.

Amateur Radio Newsline(tm) Report 1707 - April 30 2010

CLOSED CUIRCUIT ADVISORY: A REPORT FROM THE AMATEUR RADIO SUPPORT FUND

This is a closed circuit advisory and no necessarily for air. I'm Bill Pasternak, WA6ITF, and I'm here with a financial update on Newsline.

First the good news. As we go to air this week, all the bills through the end of March have been paid. The bad news? As I prepare this report we have only about $220 in our account and come early May, there will not be enough to cover the April bills which will be in the $800 to $1000 range. In reality, not much different than in the months and years past.

In checking the PayPal account, a few moments ago, between April 4th to April 27th we have received only $60 in contributions. And when you deduct the fee charged by Pay Pal, our net income this month was only $57.34. Clearly that's just not enough to make ends meet. And that's also the reason I'm here making this report to you.

We do our part to hopefully bring you the news that you want to hear. But we need your help to keep going. As Amateur Radio Newsline is a 501(c)(3) not for profit corporation, to make a tax deductible contribution is easy. Either send it to us at the address you will hear at the end of this weeks newscast, or go to arnewsline.com ad click on the PayPal logo to make your contribution electronically. Whichever way you choose, the all volunteer staff of Amateur Radio Newsline joins me in saying a big "thank you."

That ends the closed circuit advisory. I'm Bill Pasternak, WA6ITF, and now here's Jim Davis, W2JKD, with this weeks report. Jim:

**

Amateur Radio Newsline report number 1707 with a release date of Friday, April 30th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. The comment period begins on an FCC proposal to permit hams to communicate for their employers during emergency training drills, the dates for the 2010 Global Simulated Emergency Tests are announced, a Wisconsin town challenges the tower of a 10 year old ham who suffers from Cerebral Palsy and a phone call clears Radio Kuwait out of the 40 meter ham band. Find out the details on Amateur Radio Newsline(tm) report number 1707 coming your way right now.

(Billboard Cart Here)

RADIO LAW: COMMENT DATE SET IN WT DOCKET 10-72 ON USE OF EMPLOYEE HAMS INDRILLS

The FCC's Notice of Proposed Rule Making on providing communications on behalf of an employer during a government-sponsored emergency or disaster drill has finally been published in the Federal Register. Its now time for you to voice your opinion. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

On April 22, a summary of the Notice of Proposed Rule Making in WT Docket 10 - 72 was published in the Federal Register and starting the clock on the 30 day commentary period and 15 additional day Reply Comment period. Comments are due on or before May 24th with reply comments due by June 7th.

By way of background, back on March 24th, the FCC released the Notice of Proposed Rulemaking. It suggests amending the Part 97 rules to permit, under certain limited conditions for hams to transmit messages during emergency and disaster preparedness drills, regardless of whether the operators are employees of entities participating in the drill.

Current rules provide for amateur radio use during emergencies. At the same time, the rules -- specifically section 97.113 (a)(3) -- prohibits communications in which the station licensee or control operator has a pecuniary interest. This includes any communications on behalf of an employer, whether direct or indirect. Translated it means that even if a ham employee is off the clock he or she cannot take part in emergency training exercises.

The FCC says that while there are some exceptions to this prohibition, there is currently none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for emergency situations. Nor may they transmit messages on behalf of their employers during such drills and tests.

The FCC notes that public safety land mobile radio systems are the primary means of radio-based communications for emergency responders. But it goes on to add that experience has shown that amateur radio has played an important role in preparation for, during, and in the aftermath of natural and man-made emergencies and disasters.

The FCC says that amateur radio is often an essential element of emergency preparedness and response. Because of this, many state and local governments and public safety agencies incorporate amateur radio operators and their communication capabilities into their emergency planning. In this regard, some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have

emphasized the participation of their employees who are amateur station operators in emergency and disaster drills and tests.

Based on what it terms as a public need, the FCC is proposing to amend Section 97.113 of the Amateur Service rules to provide that, under certain limited conditions, amateur radio operators may transmit messages during emergency and disaster preparedness drills. This, regardless of whether the operators are employees of government entities participating in the drill. It also seeks comments on whether certain other drills that are not sponsored by government agencies -- such as those conducted by hospitals -- should be included in the proposed exemption as well.

Again, comments on WT Docket 10 - 72 must be filed on or before May 24th with reply comments due by June 7th.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Anyone planning to file on WT Docket 10 - 72 should completely read the Notice of Proposed Rule Making before submitting comments. You can access it
at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf)
(N1ND, ARRL, CQ Newsroom, ARNewsline(tm))

**

RESCUE RADIO: FCC GRANTS 97.113 WAIVER FOR HAWAII HURRICANE DRILL

Meantime, the FCC has granted the Vice Director of Civil Defense for the State of Hawaii Department of Defense a waiver for section 97.1123 of the Amateur Radio Rules. This, to permit participation of 5 hams directly in the agency's employ, and an unspecified number of others who are employees of other entities associated with emergency communications to take part in a hurricane preparedness exercise between May 24 and June 4th with ham radio operations slated May 29th and June 1st.

In approving the request, Scot Stone, who is Deputy Chief, Mobility Division of the FCC's Wireless Telecommunications Bureau noted that the public interest is served in facilitating amateur operations in support of this public safety exercise. As such, it warrants this limited waiver of Section 97.113 to permit transmission of communications by the amateur licensees on behalf of their employers on those dates. (FCC)

**

RESCUE RADIO: GLOBALSET 2010 DATES ANNOUNCED

The International Amateur Radio Union Region 1 Emergency Communications Group has announced that there will be two Global Simulated Emergency Tests this year. One to be held on the 15th of May and the other on November 13th.

GlobalSET is an opportunity to demonstrate how communications can occur across national borders. It also tests use the emergency Center of Activity Frequencies on the 80, 40, 20, 17 and 15 meter bands, and creates standardized practices for international emergency communications.

Registrations are now being taken for IARU member societies and emergency communications groups to participate in next month's GlobalSET. More is on-line a www.iaru-r1.org. (IARU Region 1)

**

WORLDBEAT: IARU INTRUDER MONITOR SYSYEMS CLEARS RADIO KUWAIT FROM 40 METERS

A phone call has ended Radio Kuwait broadcasting in the Amateur Radio 7 MHz allocation.

From April 12th to the 19th, the broadcaster had been transmitting programs in the Arabic language with up to S9+30dB signals. Its signal blocked almost 20 kHz of the 40 meter band from 7150 and 7190 kHz.

Soon reports began to surface of the Radio Kuwait broadcasts in the exclusive amateur spectrum and the matter was reported to the IARU Intruder Watch Monitoring System. Soon, many national coordinators had requested their telecommunications authorities to send International Complaints to the State of Kuwait.

But it was 9K2RR, the IARU Monitoring System Intruder Watch Coordinator in Kuwait who solved the problem. He made a call to Radio Kuwait, explained the situation and asked for a frequency change. And with additional support by DJ9KR, the broadcaster quickly complied. (IARU Region 1)

RADIO LAW: OHIO HAM DETAINED AT NC AIRPORT AFTER HE IS SEEN WITH FIREARM

Police in Ashville, North Carolina have charged a Ohio ham with going armed to the terror of the public. This after he was spotted at an airport parking lot. Mark Abramowicz, NT3V, tells us who the person is and explains what the charge means:

--

Joseph Sean McVey, K8JSM, is from the town of Coshocton, Ohio, northeast of Columbus and just south of Akron. McVey, in his posted QRZ.com biography, says he prefers to go by Sean.

The FCC database shows he was first licensed as a Technician in 2008 and upgraded to General in March 2009 and sought a Vanity call sign which just happens to match the initials of his name - Joseph Sean McVey.

McVey is 23 and was released Tuesday, April 27 on 100-thousand-dollars bond by authorities in suburban Asheville, N.C. where he was taken into custody on a misdemeanor charge of going armed to the terror of the public.

The attorney general's office in North Carolina says it essentially means he was carrying a gun for the purpose of terrifying others.

McVey was arrested on Sunday, April 25, near the Asheville Regional Airport just after Air Force One took off with President Obama and his family on board. They had been in the Asheville area on getaway weekend.

The Secret Service initially wanted McVey detained after law enforcement found him on airport property inside a car made up like a police vehicle with a light bar and siren. It was also equipped with police scanners and other radios.

On April 27, The New York Daily News quoted the Secret Service as saying it didn't consider McVey a threat and passed him off as a law enforcement buff.

The Coshocton Tribune and it's related publications did an exhaustive check on McVey, including examining postings on Facebook, MySpace and Twitter. It found McVey had posted two Tweets on Friday, April 23, from Limestone, N.C., just south of Asheville.

The FCC has a track record of revoking the licenses of amateurs who it considers displaying improper or unacceptable conduct clashing with the good character it expects of all licensed hams.

It's unclear whether the FCC will take any action regarding McVey's license.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

At the time of his arrest McVey did have a concealed weapons permit that had been issued in Ohio. That permit has been at least temporarily revoked pending the outcome of the case against him. If the charges are not dismissed and if he is convicted, McVey faces a maximum sentence of 120 days in jail. His next court appearance is scheduled for June 10th. RADIO LAW: WISCONSIN CITY CHALLENGES 10 YEAR OLDS TOWER AND ANTENNA

A Wisconsin's pre-teen ham who suffers from cerebral palsy could loose his tower and antenna system over a dispute with the city. But the family of 10 year old Samuel Markstrom, KC9POP, is fighting back by saying that their sons hobby has changed his life by building his self confidence.

Village leaders say the Markstrom's didn't have the proper permits to build 62 foot tower that sits in their backyard in Mount Pleasant. But his

mother Catherine Markstrom, KC9EOW, says that everything had gone in, to their knowledge very legally. She also notes that there are days when her son cannot get outside to play and he gets really depressed and upset. Now she is worried her son will have to give up his indoor hobby as well.

But the tower is opposed by at least one neighbor. News reports quote Eric Scott lives directly next door to the Markstrom's. He claims that he is worried that the tower could topple over while his own chils was playing in his yard. KC9POP's parents counter by saying the tower is rated to withstand hurricane force winds and that there isn't a danger.

In his on-line bio on QRZ dot com, Samm as he calls himself says that he is active in Boy Scouts as well as volunteering at WI9VCR, which is the Volunteer Center of Racine County. He says that his favorite bands are 10 and 6 meters but he is also active in repeaters in the Racine, Kenosha and Milwaukee repeaters. And according to one news report, the fifth grader has also been active in public service by spreading the word about last summer's Kenosha tornadoes. For that effort he was presented an award by the volunteer center.

The future of the Samm Markstrom's tower will be decided by the Village of Mount Pleasant's zoning board in June. (JournalTimes.com, eHam.net)

RADIO CRIME: COPPER THIEVES TAKE KC TV STATION KMBC OFF THE AIR

Copper thieves were responsible for taking Kansas City television station KMBC off the air last weekend . Police responding to a burglar alarm Sunday evening April 25th found a large section of 2 inch conduit cut away from the side of the transmitter building and green coolant spilled across the adjoining area.

The tubing was part of KMBC's transmitter system that circulated coolant around two final amplifier tubes valued at close to $40,000. A sensor that detected the sudden loss in pressure shut down the transmitter. Whether the shutdown happened in time to save the tubes is a question that KMBC Director of Engineering Jerry Agresti said won't know until repairs are made to the cooling system and a thorough evaluation of the transmitter is done.

One thing Agresti says that he is sure of. Either the robbers knew exactly what they were doing or were incredibly brazen. The coolant used for the transmitters final amplifiers gets very hot and the burglars could have easily been scalded by it. (KC.com)

HAM RADIO ON THE NET: CONTESTING 101 WEBINAR MAY 7TH

Kirk Pickering, K4RO, the National Contest Journal's Contesting 101 column editor will shares tips and tricks for the beginning contest operator. This during an on-line Web Seminar or Webinar slated for Friday, May 7th at 9 PM Eastern Daylight Time.

All you need is your PC, speakers, and a high speed Internet connection. To take part you must register in advance on line at tinyurl.com/2685ld9

The on-line Webinar is sponsored by the Potomac Valley Radio Club and is free to anyone wanting to take part. Registration is free. Questions or comments can be sent to k4zw (at) comcast (dot) net. (PVRC)

**

THE SOCIAL SCENE: SCHOOL CLUB EUROPEAN UNION DAY MAY 5th

The annual School Club European Union Day will take place on May 5th. School Club European Union Day fosters contacts with and between school amateur radio clubs and training centers and gives them the opportunity to contact other amateur stations around Europe. It's planners say that it is a great way to get young operators on the air from their school stations. An English version of the rules for this event can be found at tinyurl.com/2u6x86c. (Southgate)

**

HAMVENTION® NEWS: D-STAR LINK APPROVED

The Dayton Hamvention has received approval from the D-Star reflector owners to link its W8BI system to the 30-B reflector over the Hamvention® weekend.

If you would like to follow the D-Star activity in Dayton over Hamvention® weekend, please use a linked repeater or link your DV Dongle to the 30-B reflector. Please do not link directly to the W8BI gateway.

This is the second year such a D-Star link will be in place. All questions and comments on what is happening go to Mark Erbaugh via r-mail to microenh (at) hughes (dot) net. (D-Star Reflector, WB9QZB)

**

HAMVENTION® NEWS: ONE DAY TECH CLASS TO BE TAUGHT AT HAMVENTION 2010

A one-day Technician class will be held at Hamvention® 2010. Slated for Saturday, May 15th, the class will be taught by Mitch Stern, W1SJ, from 8 AM to 4 PM behind the Luso Tower in the East Hall. Exams will be conducted at the conclusion of class and a new Technician class license should be issued by the next day just in time to do some last minute radio shopping. Pre-enrollment for this course is required via the Internet tinyurl.com/2dska2l (Hamvention® Reflector)

NEW PRODUCT: 75 METER AM TRANSCEIVER KIT

And here's something you do not see very often. A new full carrier amplitude modulated transceiver for the 75 Meter band. Recently launched by Dave Benson K1SWL of Small Wonder Labs, lovers of AM can now get on the 75 with a 2.5 watt AM transceiver kit that costs less than $70.

The transmitter is crystal-controlled with 3885 kHz supplied. The receiver is varicap tunable over a 50 kHz, selectable range and comes with a 4 kHz crystal filter for ample selectivity.

According to K1SWL, while you won't expect to work DX with this transmitter, it's fine for area communication. On his website Dave notes that the two most distant QSOs to date from his home in New Hampshire have been Maine and Long Island, New York. Both were 30-minute ragchews with good copy both ways.

Full details on this kit at is on line at smallwonderlabs.com/Retro-75.htm or by regular mail to Small Wonder Labs, P.O. Box 187, Newport New Hampshire, 03773. (Press release)

THE CHANGING OF THE GUARD: DON JOHNSON, W6AAQ, INVENTOR OF THE SCREWDRIVER ANTENNA - S.K.

Don Johnson, W6AAQ, inventor of the screwdriver mobile antenna died Wednesday, April 14th. He had been ill for several months and was 91 at the time of his passing.

According to Al Melcher, W6ARM, when the FCC first authorized H-F mobile, a group of hams in the San Francisco Bay area decided to go mobile on 75 meters. They chose 3 point 995 MHz as an operating frequency to reduce the possibility of high power fixed stations interfering. And it was W6AAQ who came up with the idea of using a metal tube with a whip on top of a coil that fit inside the tube. By raising and lowering the coil a resonant point could be found.

Johnson was searching for a method of tuning the antenna remotely when W6MHP suggested using the motor from a cordless screwdriver. Thus the "screwdriver mobile antenna" was born. Johnson received a patent on the device and built and sold thousands.

Don was a retired navy radioman and pilot who lived in Esparto, a small community in Northern California west of Sacramento. He was to be buried with full military honors at the National Cemetery in Dixon, California. A memorial service will be held for W6AAQ in July. (QRZ.com, others)

WORLDBEAT: UK GROUP ENDS PACKET OPERATION DO TO DECLINE IN INTEREST

Call this one a sign of the times. This with word that Steve Perkins, G4FPV and Stewart Wilkinson, G0LGS have decided that due to the continued decline in Packet Radio activity that they will end Packet Radio Nodes and BBS facilities in and around the North Gloucestershire and South Worcestershire regions of the United Kingdom.

Going away on May 31st will be the G4FPV Node, the GB7GLO AX 25 Bulletin Board and the GB7LGS combination Node and Bulletin Board Service. All three systems have served the region for close to 20 years.

While the Internet with its high speed delivery of e-mail has generally replaced Packet Radio as a messaging system, in some areas of the world the Automatic Position Reporting System or APRS has kept many Packet Nodes alive. But as can be seen by this announcement, conversion to APRS is not taking place at every Packet Radio site.

The notice of this closure has also been made on the Gloucestershire Repeater Group web site. Its in cyberspace at http://www.grg.org.uk/news.php?readmore3 (Southgate)

**

WORLDBEAT: SHANGHAI BANS TWO WAY RADIO NEAR WORLD EXPO 2010 SITE

Shanghai city leaders say that the city is to impose controls on devices capable of transmitting radio waves from 12 pm on April 30th through 12 am on May 2 and again on October 1st and 30th. This, to ensure the proper operation of facilities inside the 2010 World Expo site.

During these periods, items such as walkie-talkies, industrial remote controls, amateur radio stations and even school broadcasts will be banned within 500 meters of the Expo site. The only exception will be for cellular mobile phones which officials say will not be affected. (Eastday.com)

**

HAM RADIO IN SPACE: SWISS TISAT BASED ON ALINCO HT READY FOR LAUNCH

The Swiss Amateur Radio CubeSat TIsat-1 built by students in Ticino is ready for launch from India later this spring. TIsat-1 will fly on the PSLV-C15 launcher from the Sriharikota Space Center into a planned 670 km sun synchronous orbit with an inclination of 98.5 degrees.

The satellites communications system is based on an Alinco DJC-6 dual band hand held transceiver. The downlink power will be 400 milliwatts on 437.305 MHz. It will send its call sign HB9DE in CW and transmit AFSK telemetry from its on-board experiments. The satellites uplink will be at 145.98 MHz. (ANS)

**

HAM RADIO IN SPACE: SOUTH AFRICA AMSAT ANNUONCES NEW HAM-SAT

And South Africa AMSAT has announced that it will be building its own ham radio CubeSat. The project will involve radio amateurs and school students.

The currently proposed payload includes a transponder with a 30 kHz bandwidth, a telemetry beacon and several science projects, but that's subject to change from the South African ham community. At this stage in the project SA AMSAT is inviting input from that nations amateur radio community before the final payload is decided on, and project teams will then be set up. If you are a South African ham and interested in becoming involved, you are invited to send an email with your contact details and areas of expertise to saamsat (at) intekom (dot) co (dot) za.

(SA AMSAT)

THAT FINAL ITEM: CFL'S VS TV REMOTES

And finally this week, a story from the United Kingdom about an unseen phantom taking control of television sets. But it wasn't a ghost or goblin. It was light bulbs as we hear from Jason Daniels, VK2LAW:

--

Some feared it must have been a problem with their remote. Others suspected ghostly goings-on.

But when TV viewers complained their sets were changing channel by themselves, few could have guessed the real culprit - their light bulbs.

Low-energy bulbs can make your television turn over the station at random, according to customers. Among the first to spot the problem were UK cable

customers Alistair and Emma Clements.

They rang their supplier, Virgin Media, and were told the problem could be because of the Philips low-energy light bulb fitted nearby.

But while changing it helped, the couple say the channel still flips from time to time even though the nearest low- energy bulb is now in another room.

Experts say infra-red light from modern fluorescent bulbs can be 'mistaken' by electrical equipment for commands from its remote. They warn that while moving or changing the offending device usually solves the problem, the proliferation of gadgets in homes increases the likelihood of such interference.

Traditional bulbs produce infra-red too, but because they don't 'flicker' like some fluorescent bulbs there is no danger of interference with electrical equipment.

This weird and wonderful occurrence is akin to a problem my next door neighbor had soon after he had a pace maker installed. Every time I changed TV stations he would do cartwheels in his lounge!

I'm Jason, VK2LAW.

--

So far nobody we have heard about in North America has complained about low energy compact fluorescent lamps causing this kind of problem. One of the reasons most likely is that North America uses 60 Hertz AC rather than the 50 Hertz used in the U-K and the flicker rate is far harder for a TV remote receiver to be fooled by. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award closes on May 30th. That gives you only about a month to nominate a deserving teen or pre-teen radio amateur for this yearly honor.

Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or

her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

One of the things that influences the number of hams in a city or county
is the jobs of at least ONE of those ham radio operators.

For example some years ago the number of ham licenses in Branch County
Michigan went up by a fairly large (for that county) number.

You see. A school hired a Ham and he convinced them to offer a class,
regular day time class, as an elective.

His graduates all got licenses.

Better in that it's more advanced.. Several years ago (about 30) I was chatting with a ham who had just finished his hitch in the military, He commented on being ask to check out some equeptment since he was a certified electronics tech both in civilian life and military life.

As he unzipped his jump suit so he could squat down easier the MP's with him noticed his HT-220.. At the time they were still using HT-200's (I do admit the 200 is more solid (durable) than the 220)

I watched his dad bounce a 200 off the pavement. (He had the radio at his ear when he tripped and threw the radio down to help regain his balance.. The radio continued to work.. he is one of the very few people taller than 6'3"me)

And you said you did not knwo any ham gear as GOOD as military hardware.> True story:

Some years ago a Ham "90 day wonder" LT was put in charge of a communications unit.. The SGT's figured they would have to teach him all about the stuff.

Well. he noticed an order for a new piece of gear (Linier amp as I recall or Transmitter) and ask the Sgt if it had come in yet "Yes, but we did not get the manual" so.. he said "Let's take a look at it"

He then demonstrated that he knew how to work the hardware, Even w/o the manual.. The Sgt though wanted the manual.

So he called back to the states.... Direct to the President and founder of Henry Radio.. yes, the amplifier or transmistter was a common Ham unit with a new paint job and military style knobs.

Several pieces of gear, Henry, Collins, Drake and more, came in civilian and military versions. The only difference was the olive drab paint and the military style knobs and an "A" for Army (or some other designator to indicate the cosmetic differences)

As recently as Viet Nam they were still using ham gear in the Military. Good Solid KWM-2's in fact.

I used a KWM-2A and 30L-1 when I ran the Navy MARS station at Danang.

We had a log-periodic at 40 feet, and I was able to reach the states
nine nights out of ten.

The KWM-2A wasn't a perfect radio: at the Air Force MARS station in
Saigon, they had to pair each KWM-2A with a 51S-1 receiver, since the
receiver in the KWM-2A couldn't handle the intermod from adjacent
positions. However, it did combine rugged construction with relative
ease-of-use, and the audio quality helped a lot with noisy phone lines.

Good answer, Hans. Having worked 3 years in environmental testing at Hughes Aircraft (El Segundo Division) in 1956 to 1958, I've got a fair amount of experience in that. Essentially, consumer grade electronics(and some industrial grade) will simply fall apart when subjected to thefull brunt of MIL-STD-810.

With newer electronics becoming more compact there is less mass to be affected by shock and vibration, will survive better than big clunkyold electronics. Designers don't go full bore on temperature testing of circuits for lower-grade environment products so those can fail there. Salt spraywon't affect plastic cases much but there are seldom any good seals betweencase and controls in amateur radio equipment. Just some general examples.

I'm not saying that "all" amateur equipment will fail, only most of it if stuck with the full brunt of MIL-STD-810 testing.

Handheld transceivers see most sales to professional users so it isnormal to do a releatively-simple (nowadays) frequency modification to run themon amateur frequencies. Few HTs sold to pro users get full-on 810 testing (810 has more variations now than a half century ago) so the marketing come-on phrasing of "compliance" isn't always accurate to indicate "toughness."

So few here have had any experience in testing equipment under military environmental conditions that they can't talk about it with accuracy. I've seen some pros with experience survive such testing rather crestfallen with "I should have anticipated that condition" after they fished out the components that had vibrated loose at low-frequency shaking.

Was I a victim of that same "should have anticipated" grouping? Yes.Back in the days of slide-rules, no calculators, I slipped a decimal point for a zener temperature compensation circuit for a voltage reference. Found it during a temperature cycling test. Went back into the log book, found the error, fixed it with an Engineering Change Request and in hardware and published it in one night's extra work (not paid for) at RCA. A few weeks later my HP-35 arrived and I double-checked my correction. :-)

IOW, it's an environmental specification, not a radio-performance one.

I followed the links provided by K3FU and noticed that in each description the rigs were only said to meet the shock and vibration requirements of MIL-STD 810, not the entire specification. The description also didn't mention which version(s) were used. IMHO those are important points.

Meeting the shock and vibration requirements is a matter of mechanical design. Meeting requirements such as salt spray, temperature and humidity extremes, high altitude, water immersion, etc., is a completely different game because each and every component must either meet the specification or be protected from the environment. Components that meet the spec are more expensive and fewer, while protecting from the environment is complex and often impractical for size/weight/cost reasons

Is an HT-220 really that much more advanced than an HT-200?

> I watched his dad bounce a 200 off the pavement.
....
> The radio continued to work.

In a lot of situations - and not just military ones - that it
continued to work is a lot more important than how advanced the radio
is.

I think the main point is that how "good" or "advanced" a rig is
depends in large part on the application, and judging military radio
stuff by amateur standards - or the reverse - is an apples-and-oranges
thing.

For example, the R-390 and R-390A were designed way back in the early
1950s, and one of the requirements was a digital frequency readout. A
lot of mechanical complexity went into producing a system where you
could just look at one set of numbers and know exactly (well, within a
couple of hundred Hz) where the receiver was tuned. No interpretation
needed. Such a feature would not appear in manufactured ham rigs until
the 1960s (National NCX-5) and wouldn't become common in ham rigs
until the 1980s.

Or consider the R-1051 receivers, which used a row of knobs to set
each digit of the frequency, rather than a single large knob. That
kind of frequency control became common in military HF sets but not in
ham gear, because the operating environments are so different.

The T2FD resistively-loaded antenna is another example.

In some roles, yes. But not in all roles. I suspect that the use of ham gear in military applications came about only when nothing else was available at the time.

Remember too that a lot of ham gear and components (such as the PTOs developed by Collins) were originally developed for military applications and then used for ham stuff.

Plus US military involvement in Viet Nam ended at least 35 years ago. A lot has changed since then.

> As recently as Viet Nam they were still using ham gear in the Military.
> Good Solid KWM-2's in fact

The Collins KWM-2 (all-frequency-band maritime version) was used for
MARS under the AN/FRC-93 designation through the Vietnam War. No
change in color or knobs or much of anything else. For reference, see
TM 11-5820-554-12 for the "set-up-and-operate" TM. This is essentially
the Collins document under DoD wrapper. Date of TM is June 1976.

There have been a great number of civilian fixed station equipments that
have been designated as "military" (by the addition of a sticker/label)
as far back as 1953 without any special tests, physical or
electronic, without any changes or additions in appearance. None of
these were intended for field use up to about 1980 or so, therefore they
would not have undergone full environmental testing. Consider them
"COTS" (Commercial Off-The- Shelf) equipments as described by Hans.

Those of us who have served in the USA military usually
define "military" as those equipments which have gone through full
environmental testing and are used in the field or afloat. MARS is not
normally part of the standard tactical communications used by the
military even though such equipment may have military or NSN (National
Stock Number) designations for procurement purposes.

TEMPERATURE, both ambient and internal is an important factor. We
can't do the "wait a half hour" or "20 minutes" for the radio to warm
up. Radios don't get to sit in "room temperature" environments during
emergencies. [recall the 1928 "Amateur's Code" and the imperatives of
being ready for "emergency communications"]

Full water immersion for a specified period is a NEEDED specification
for an HT to perform in an emergency such as flood or torrential rain.
Operating mobile or pedestrian (with a manpack radio) has its own
needs for shock and vibration. Mobile installations aren't always
nice and plush with comfy seats for radios. Saying a pedestrian
station remains cushioned by the wearer ignores the fact that the
manpack wearer can fall down in rugged terrain.

>Meeting the shock and vibration requirements is a matter of mechanical
>design.

At first. That's when the designer first begins to "lay lead." What
comes next is the prototype which is (or should be) tried out in the
field or afloat...and (probably) several iterations of trying a fix
and
seeing how that performs. Sometimes that is easy, sometimes it is
difficult.

>Meeting requirements such as salt spray, temperature and
>humidity extremes, high altitude, water immersion, etc., is a
>completely different game because each and every component must either
>meet the specification or be protected from the environment.

A generalized statement like that indicates no experience with adverse environments. One can "perform" like a champ at room temperature in a residence environment but try it below freezing or in a vehicle that has been in +118 degrees F all day (interior is MUCH hotter). I've been
in both environments more than once and don't care to do it again, but if there IS a need to have a radio perform, then I've had some experience
in making them do just that.

>Components that meet the spec are more expensive and fewer, while
>protecting from the environment is complex and often impractical for
>size/weight/cost reasons

If so there wouldn't be an aircraft able to fly today, nor with the radios that enable comm and nav functions to tell pilots where they are. That's been done for over 65 years now. Read some ARINC specs and, especially, meetings minutes about their standards to get a fuller picture.
Or, you do another thing I've done: work in an environmental test lab and DO the testing...plus sweeping up the pieces of those designs that failed testing. <shrug>

Well, I've been out and about when the temps read -40 (your choice of F or C) and I've been in cars where 118 (F) would have been "Cooling off" and in both cases my ham radio hardware was working just fine

Though I do admit at -40 the car itself failed

And I put the transciever INSIDE my coat)(At least one of them, I was "layered" that day since I was working parking lot detail) only the Plantronics mic voice pick up tube was fully exposed, the mice itself was under my hat

I think, here, we are starting to reach the same page, we may be viewing it differently but we are, at least, viewing the same page.

I agree, Ruggedness (Continuing to work under adverse conditions) beats "Advanced" in many cases and generally in most all military cases.

Fiction story: IN a Star Trek book some rick kid is putting down the comm gear on the Enterprise till Uhura explains why the older clunkier and easier to fix hardware beats the heck out of his little one chip hyper-intergrated circuit radio. (Of course she's fixing it at the time)

Fact.. That is very true. something that can be "Field fixed" is better than a "Toss it in the trash and break out a new one" epically if you have a parts store but no complete new box

I recall some digital readout hardware much earlier.. But then,,, When you think about it. after WWII many hams used government surplus hardware. So the Military stuff, BECAME the ham stuff.. Alas, modern military rules kind of make that hard to do since they "De-militarize" so much stuff.

Gee... I have a 2-meter rig in my motor home (Currently set to 146.52) that is 30 years old and which you set the frequency by a row of dials (Knobs turned sideways) just like you describe. It's 100% ham. The Wilson WE-800 Revision 3 (3rd production run) and I might add, it had operated from -40 to well over 120 degrees. F

In a discussion of MIL-STD 810:

I guess the real point here about various standards and with
regards to anecdotal stories about "Well this did..."

The bottom line on buying hardware for adverse conditions is
whether or not the manufacture is willing to say that it
"Absolutely and without fail will work under the following
conditions."

As opposed to specifying a narrow range and if works out side
of that, well, fine.

Also, remember, advertising is based on the perception by
marketing as to who the potential buyer is.

If there was a "MIL-STD-xxx" specifying that a piece of
equipment should be shiny and have lots of buttons, they'd
be pushing that too.

Let me put it this way.

If you are going to design a product for the military, (And you must admit military contracts are the "800 pound gorillas" in the business). And by simply tweaking a tuning slug it will work as well on the ham bands.. and the device is not "Classified" in and of itself.

Why not market to hams as well?

Now, I do admit that the military has some classified stuff that I'll likely never set eyes on.. But then one of the reasons I know they were using KWM-2a's in Viet Nam is a ham who returned from there, tears in his eyes, telling of how a fairly large number of said radios were "De-Militarized" (Trust me folks, you don't want to know) Perfectly good ham radios were being totaly reduced to their atoms because they were part,, Mind you just part, of a classified communications system.

Never mind that they were a part you could buy over the counter at Ham Radio Outlet.. they were still part of a classified system so they were blown up, drilled, shot, flamed, run over with tanks and otherwise redced to powder.

A total waste of thousands of dollars worth of hardware that could have been sold, without danger of compromising the classified system at all since this was just a part.

I mean.. I'm sure that somewhere in that system was a 5 amp AGC-3 size fuse... How would re-selling that part comprimise the entire system (it was, at the time, a common car part)

I haven't been involved in Mil spec testing. I was involved in Cable Television testing, in which we cycled between extreme temps - don't remember the exact temps, so I just used "extreme". We did immersion tests in salt and fresh water. We did vibration testing. Neat device, it was a sort of mini-system, we sent signals through it, and tried to run to failure. Shake and Bake, we called it. After a month or so without a failure, we'd give up. Some equipment was used by the Navy, so the testing method must have meant something. note, we tested all the models this way.

Personally, I wouldn't pay for a completely mil spec tested HT or other Ham equipment. Even for emergency use, I wouldn't. There could be some argument there, but we're Hams, and not soldiers in this context. I have a FT-50 that has passed vibration and water testing both model wise and by personal experience.

It's gone in the drink a couple times, and been dropped several more. I'm embarrassed to admit that it spent a very wet weekend on the roof of my SUV, I only discovered that sad fact when it fell off and bounced a few times in my driveway. I picked it up, dried it off with a towel, and mashed the power button. Didn't miss a beat.

So while mil-spec testing is great if the equipment needs it, I have no trouble at all with accepting - and paying for - equipment that is tested to a level of ruggedness more in line with Amateur needs.

As Scotty used to say, the more complicated you make the plumbing, the
easier it is to stop up the drain.

> Fact.. That is very true. something that can
> be "Field fixed" is better
> than a "Toss it in the trash and break out a new one"

Yes and no. In some situations the time and resources it takes to fix
something is more than the resource-cost to have a spare new box.

Again, it all depends on the situation. And on what we consider
"fixable" and "a component".

For example, for about 10 years I've been assembling my own PCs from
pieces of old ones. (The machine this was written on was built just
that way). I've also fixed many PCs with hardware problems using parts

from the boneyard.

But in practically all repair and assembly situations involving PCs,
the "components" are drives, motherboards, memory sticks, video cards,
etc. Such components aren't usually repaired if they fail, they are
simply replaced, because the replacements are available and
inexpensive (often free).

> hardware. ?So the Military stuff, ?BECAME the ham stuff..
> Alas, modern
> military rules kind of make that hard to do since they
> "De-militarize"
> so much stuff.

I still have working WW2 surplus radio stuff. Like my $2
BC-342-N, built by Farnsworth Radio and Television...

The reason hams used surplus stuff was that it was inexpensive.
The reason it was inexpensive was the sudden end to WW2 in
late summer 1945.

Military hardware of all kinds was being manufactured and
stockpiled in great quantities for the invasion of Japan. When
the war ended suddenly, those stockpiles became surplus.

Note that much of that surplus required modification to be useful
to hams. Some of it was only really useful if torn down for the parts.

Those mods don't mean the original design was faulty. They
simply mean the application was different. For example, my

BC-342-N had its sensitivity improved by changing the values
of the cathode and screen resistors of the RF and IF stages. The
original design used different values because they were more
concerned with dynamic range than sensitivity.

And I have a 1977 vintage HW-2036 2 meter rig that is similar.

But they are not HF rigs; they're 2 meter FM rigs. The R-1051 family
are HF receivers, and date from the early 1960s.

The point is that the military application required a receiver that
could be set to a known frequency with great accuracy, not the
ability to smoothly tune through the spectrum looking for signals.

You've got me beat there!

The coldest I've ever personally experienced was -36 degrees F. (Yes I
was outside working in it).

The hottest was about 110 degrees F

Well, I clipped a lot: You ask for examples of earlier digital readout (pre-1980) stiff, and then agreed that many hams used Surplus Military hardware.. Likely the digital stuff I saw was ex-military. It has been like 40 years since I saw it so I can't recall much.

Now,, the -40.. I had parking lot detail at a swap fest
The 120+ was the temp recorded inside a car. facing NORTH, in Michigan, IN JANUARY of all months. Imagine what it hit in August?

The only time the radio did not work properly was when the battery voltage went low. Then it would would not receive properly till the voltage came up a bit.

421. Many Radio Clubs Could Lose Tax-Exempt Status in 2010

Newsgroup: rec.radio.amateur.moderated

If you are an officer of a radio club, here's an article posted on the ARRL News Web site today that might be of importance to your club. Because of the time-sensitive nature of the May 15, 2010 deadline, I wanted to promptly get it in the hands of local club officers throughout the Midwest Division. The ARRL News story has links to IRS information and forms, at:

http://www.arrl.org/news/many-radio-clubs-could-lose-tax-exempt-status-in-2010

73, Cliff K0CA

Many Radio Clubs Could Lose Tax-Exempt Status in 2010
ARRL News 05/03/2010

Changes made three years ago to the federal tax laws could cause many radio clubs to lose their tax-exempt status this year. Clubs that are tax-exempt under Section 501(c) of the Internal Revenue Code must file the required IRS annual returns or reports before the deadline, which is May 15 for those with calendar years.

"Many clubs have, at some time in the past, applied for tax-exempt status as charitable organizations under Section 501(c)(3), as civic leagues under Section 501(c)(4) or as recreational clubs using Section 501(c)(7)," said ARRL Southwestern Division Director Marty Woll, N6VI." Years ago, any club with gross receipts averaging less than $25,000 per year was not required to file annual returns with the IRS; however, after 2006, such clubs had to file a Form 990-N, a simple 'electronic postcard' with minimal information, by the 15th day of the fifth month after the close of each fiscal year. Some clubs may not have been aware of this new requirement or didn't bother to comply. Even those that filed in a prior year may have neglected to keep up with the required filings as officers changed from year to year."

Section 6033(j) of the Code provides that failure to file Form 990, 990-EZ or 990-N for three consecutive years results in revocation of tax-exempt status as of the filing due date for the third return. That filing date for calendar year 2009 is less than two weeks away. "If you are a club officer and are uncertain who is responsible for IRS filings, or whether such filings are current, you should determine your fling status as soon as possible and take immediate steps to file the current and any missed prior-year IRS forms," Woll explained. "Going forward, your club's board should assign the responsibility for compliance filings with a designated officer and document that responsibility in the written 'job description' for the position so that subsequent holders of the office are made aware of the

requirements. If you have questions about your club's status, you may
wish to consult a CPA or other tax advisor."

422. Weather Radio Recommendation needed

Newsgroup: rec.radio.amateur.moderated
Date: 2010-05-04 16:03:00 UTC
From: Tom Horne <hornetd@gmail.com>
Message-ID: <f0219578-8f52-4aa8-8c9e-1a486cf7e8a8@q30g2000yqd.googlegroups.com>
Source record: 1344

I am a Skywarn net control and net manager. I need a recommendation for a weather radio that can function well in the environment of a Amateur Radio Station. MY present unit, a First Alert / Sima 268, gives of an obnoxious howl every time I key my fifty watt two meter transceiver. Worse still it gives off more false alerts than it does real ones. The false alerts do not coincide with transmissions from my station so I do not suspect receiver overload.

What I would like to find would be a receiver that is field programmable without separate software, that can be programmed for the type of alert as well as the specific area, and that has an external antenna input that is not wired in parallel with a built in antenna.

The biggest issue for me is the false alerts. When I'm doing the net manager thing for Skywarn and the weather alarm goes off I have to check that the warning makes it into the next periodic net announcement by querying the Net control on the computer chat or monitoring the net frequency at the appropriate time.

I also use the same unit as my families warning device. That is why I want to be able to program the type of warning. I'm simply unwilling to be woken up at two in the blessed AM for an amber alert.

Any real world experience based recommendations for a suitable model would be appreciated.

Since I've actually designed military equipment, last one being the
AN/ASM-416, a test set, I just don't see that "gorilla" label.
Specifications are sometimes tough to meet and nobody can talk their
way out of it (as salesmen or executives do) to project overseers.
You either meet specifications or you get fired. I always met spec.

I don't think I could define military contract work because so many
hams just haven't done it and they are all full of misconceptions.
It is just WORK. If you like it you get paid for the fun. If you
don't like it then you probably wouldn't have gotten high enough
on the totem to be in a design position.

>And by simply tweaking a tuning slug it will work as well on the ham
>bands.. and the device is not "Classified" in and of itself.

The MAJORITY of military contract work is NOT classified. Hasn't
been for decades. The major 'classified' category is "company
private" which is common, very common to all corporations, amounting
to not jabbering company stuff to workers in other companies. Yes,
I've been vetted by the FBI and a bunch of other alphabet soup
agencies up to Secret with a background check (actual interviews
in-person) for Top Secret. Missed a "Q" clearance completion
because my work assignment change to another group. ['Q' was a
classification involving nuclear things]

Forget the Hollywood BS about security clearances, drama, and
that phony baloney. I live near "Hollywood" and very, very few
of those were actually involved in such national secrets. The
only ACTUAL encounter close to me was the Lockheed "Skunk Works"

at Burbank airport (now renamed "Bob Hope"), at Building 82 just
off the Hollywood Way and Winona intersection in Burbank, CA.
Drove past it for years and years without knowing it was THERE
all the time since WWII days. A mile and a half from my
house of 37 years, I had to find out its location from a book,
a biography of Ben Rich, successor to legendary Kelly Johnson,
read several years after Lockheed pulled out of Burbank.

>Why not market to hams as well?

Ahem...Collins Radio tried that but it wasn't profitable.
Hallicrafters went bust long ago. National Radio quit the
ham market long ago. SGC in Washington state markets HF
SSB transceivers mainly to private boat owners but isn't
pushing for the ham market. Face it, HF radios are NOT in the
market spotlight anywhere except to hams and the Big 3 in
Japan have that tied up nice and tight. The market for NEW
radios is at VHF - UHF - Microwave, strong emphasis being at
1 GHz for cellular telephony...both cell sites and mobliles.
Its been that way for over two decades.

>Now, I do admit that the military has some classified stuff that I'll
>likely never set eyes on..

Not that much. When I was stationed in Japan my battalion had
full run of everything but the Crypto room in the sub-basement
of the Far East Command Hq building...and guys who manned that
were battalion personnel. The reason so few see things is
because it isn't publicized and it has no "action" by itself.

To see a 1962 booklet produced by the Army on one big station:
http://sujan.hallikainen.org/BroadcastHistory/uploads/AlphabetSoup.pdf
http://sujan.hallikainen.org/BroadcastHistory/uploads/My3Years.pdf
Both are about 6 MB file size and the second one is my photo essay
of a 3-year assignment at the same station 1953-1956. Good contrast
between essentially WWII gear and better stuff working 15 years
after WWII was over.

> [on KWM-2s] Perfectly
>good ham radios were being totaly reduced to their atoms because they
>were part,, Mind you just part, of a classified communications system.

No, no, no...MARS wasn't used for "classified" comms in Vietnam. I
can
assemble a list of what was used - there's plenty of sources of
history
on that other than ARRL publications. BTW, the KWM-2 came in two
flavors: Full-frequency range for maritime market, limited range for
the ham market. AN/FRC-93 designation was for the maritime market
KWM-2.

>Never mind that they were a part you could buy over the counter at Ham
>Radio Outlet.. they were still part of a classified system so they were

>blown up, drilled, shot, flamed, run over with tanks and otherwise
>redced to powder.

Then visit Davis-Monthan AFB (?) to see square miles of "perfectly
good
aircraft" that haven't been recycled for their aluminum, outdated
engines or outdated internal mechanical, hydraulic, electrical
systems.

>A total waste of thousands of dollars worth of hardware that could have
>been sold, without danger of compromising the classified system at all
>since this was just a part.

WAR by itself is a TOTAL waste of lives and property. What else is
new?

Regardless of the tales from over 35 years ago, MARS was NOT handling
"classified" material into/out-of Vietnam. The classified material
was encrypted by a small group of personnel and could be sent over
very ordinary radio circuits using very ordinary radios.

First operational in 1989, the AN/PRC-119 (manpack version SINCGARS)
can be captured and reverse-engineered to try to find its built-in
encryption system for decoding intercepts. Won't help anyone. The
digital voice and data modulation uses a long long key and the carrier
hops at a 10 frequencies per second rate over a 30 to 88 MHz span.
"Hopsets" (colloquial) are generated at battalion Hq level for all
that encryption-hopping key information. It is difficult as heck to
INTERCEPT enough message data to attempt a decrypt attack on it.
ITT Fort Wayne, IN, has manufactured over 300,000 SINCGARS radios
since 1989 (ITT press release some years ago). What are you going to
do with a VHF radio that doesn't even have a tuning knob on it?

Since this has become a "can you top this" sub-thread, I'd like to add
that
the WHERE I experienced +118 F temps was at Kern County Airport #7,
Mojave, CA, the same old ex-USMC airfield where Scaled Composites is
located (maker of Space Ship 1). A 1.6 GHz R&D radio was being
flight- tested at the time with me sweating at the ground station as a
reference point for the airborne avionics. It worked and we got
data. It was the first generation of three and had lots of circuitry
that surprised me by keeping on working.

Sounds like the 'orphan' RCA Corp. division of the West coast over in
Burbank, making CATV systems, mainly repeaters for cable TV systems.
RCA bought the facility (and many people) from Collins Radio (their
effort
to expand but to little avail). Cable things had to sit outside 24/7
and endure
all that nature could bestow on it. Sometimes the cable engineers
would
come over to EASD in Van Nuys to use the environmental test equipment
there for bigger arrays.

> So while mil-spec testing is great if the equipment needs it, I have
> no trouble at all with accepting - and paying for - equipment that is
> tested to a level of ruggedness more in line with Amateur needs.

I'll accept that. Anecdote: In 1964 I built a SW BC receiver for my father so
he could listen to Radio Sweden on their HF BC transmissions and not
disturb me in the workshop. He died in 1975 and I put the homebuilt on a
top shelf in the workshop then. 'Standard' construction, aluminum chassis, no
special techniques of its time. Come the January 1994 earthquake in nearby
Northridge and it vibrated off the 6 1/2 foot shelf to fall on the concrete slab
floor of the workshop. Fell on one corner and did lots of damage in
bending but the six all-glass tubes all survived to test good. Tuning capacitor jammed
shut, one IF can broken, two big tears in the speaker. Thin plywood cabinet
useless to repair. One ceramic tube socket cracked.

Since then I've taken pains to keep small things on high shelves secured and
bookcases screwed to studding in this wood-frame residence. If small
things are not fastenable, I've made a small "fence" around it to
limit movement. Wood-frame buildings survive better in quakes than
brick structures since they have a natural flexing under vibration.
Another caution was to keep a "fall area" free such as books falling
off cases. That's paid off in two subsequent small
earthquakes, no damage.

>1950s, and one of the requirements was a digital frequency readout.

Not quite. The "digital frequency readout" was done for several
reasons. Collins Radio was heavy into a LINEAR FREQUENCY tuning
scheme using permeability tuning rather than variable capacitors.
This is witnessed in the predecessors which used a combination of
LF to HF receivers having straight-line scales in addition to
the rotary dial around the main tuning knob.

Linear frequency tuning was also adopted by the consumer radio
manufacturers, particularly for auto radios having automatic seek
systems that appeared in the very late 1940s and early 1950s. It
was advantageous to the cheap servo systems used there. Such
"signal seeking" tuning would disappear for quite a while until
solid-state tuning systems (much cheaper) would appear in 30 years.

The (LF) R-389 and (HF) R-390 series were required to tune a
wider band of frequencies with relatively the SAME sensitivities
across the whole span of tuning. That was unlike the older
systems which had a large disparity of sensitivity due to ganged
variable capacitor tuning in previous multi-band HF designs. The
TUNING RATE was linear on all bands of the 390 series, advantageous
to the R-391 "Autotune" version of the basic 390 series (Collins
was big on "Autotuning" everything they could back in the 1950s
and 1960s). Using the common mechanical turns-counter of machinery
('Veeder-Root'as an example of type) offered a great physical
advantage in the 390 series since it did away with the space
needed for a straight-line indicator. The gear-cam-geneva-wheel
mechanical coupling could be fitted in easier than that long
(sometimes rotating on axis) scale. All of the permeability-tuning
L-C circuits could be adapted to track straight-line tuning easier
than using (bulkier) variable capacitors. There was physical
space to incorporate the "Autotune" servo system (R-391) without
undue change of the R-390 physical structure. That the 390 series
was "digital" is like saying a whole lot of metal-working equipment
was "digital" in the 1930s because they used Veeder-Root counters
having decimal digit indication.

>I suspect that the use
>of ham gear in military applications came about only when nothing else
>was available at the time.

In the historical sense, the word "ham gear" should be replaced by
"commercial users" especially in the period 1910 to 1970. Before
the commsats, before the transcontinental microwave relay network,
before the self-pumped fiber-optic-laser lines, the ONLY long-
distance comm paths for commercial use was HF. SSB on HF was
pioneered commercially from the early 1930s onward (Netherlands
being the first to introduce voice and TTY service 24/7 to
Netherlands Antilles). MARS was never an integral part of the
worldwide military tactical communications of the USA.
The AN/FRC-93 is a KWM-2 by virtue of its label, nothing else,
was used by MARS stations for morale purposes...much like a Zenith
"Trans-Oceanic" portable receiver procured for troops during WWII.
A difference was that this Trans-Oceanic was actually painted
olive drab. :-)

>Remember too that a lot of ham gear and components (such as the PTOs
>developed by Collins) were originally developed for military
>applications and then used for ham stuff.

That seems anecdotal and subjective. Resistors, capacitors,
inductors, fastening devices, blank chassis and cabinets, et al
were all developed by INDUSTRY standards, not just military. Rack
cabinets came from the telephone infrastructure. Teleprinter code
format came from the computer industry. Collins "mechanical" (
magnetostrictive) filters were done first for the microwave radio
relay frequency multiplexer market. Modern USA amateur radio
design owes almost everything new to innovative Japanese
communications equipment designers. The US Army went to VHF
voice for short-range communications IN WWII and kept doing that
until now. Long-haul communications of the US military and
government is over the DSN (Digital Switched Network) which can
use any comm path or relay method plus is compatible with the
standard telephone infrastructure. USA submarines use ELF for
Alerts and nuke subs don't have any OOK CW capabilities.

Cellular telephony developed all by itself, by the telephone
industry, owing nothing technological to the military. Roughly
100 million cell phones are now in the USA alone. Digital
television owes nothing to any military yet the USA switched over
entirely in TV broadcasting to DTV (the first and second NTSC
systems did not come from military requirements). CB on 11m
(roughly 5 million users) owes nothing to the military. FM
stereo broadcasting owes nothing to the military. Medical
electronics communications owes very, very little to the
military in technology. All of those are RADIO applications.

> hardware..

The discussion was about amateur gear being "more advanced" than military radios. I gave the example of the mechanical digital dial on the R-390 and R-390A receivers, which were designed in the very early 1950s. (IIRC, the ARR-2 receiver was even older). Similar mechanical-digital dials didn't appear in manufactured amateur gear until the 1960s (the NCX-5) and didn't become common in amateur equipment until the late 1970s.

The bigger point is that those who set the requirements decided, way back in the late 1940s and early 1950s, that the complexity and expense of a frequency readout such as used on the R-390 was justified for a military HF receiver.

> Likely the digital stuff I saw was ex-military.

Of course - which proves what I was saying: that the applications are very different.

It must be remembered that the resouirces available are very different as well. For example, cost isn't usually as big a factor in military radio equipment as it is in amateur radio equipment. A receiver like the R-390A, when new in the 1950s, cost the taxpayers a couple of thousand dollars (it varied with the contract). The most expensive amateur receiver of the time, the Collins 75A-4, cost about 20-25% of that. Not many hams could afford a new 75A-4 in its day; even fewer could afford an R-390.

Was the 75A-4 "more advanced"? In some ways, yes - it has passband tuning, a product detector and notch filter, all of which the R-390 family lack. The mechanical filters in the 75A-4 are more suited to amateur operation as well. OTOH the 75A4 has an "analog" dial despite using a PTO, and is not general-coverage.

Different job, different resources, different tool.

Of course the radio amateurs of most countries have the option of homebrewing their own rigs, which can be a real cost-saver. (See my QRZ.com bio for a current example, and the K5BCQ HBR website for an earlier example.)

I think the subject of military surplus becoming ham gear and
influencing ham gear is worth its own thread, so here goes.
(I've reused enough surplus stuff in my time...)

Some examples of the influences:

Look at the quartz crystals used in post-WW2 ham gear, and you'll see
"FT-243" and "HC-6/U" units being used extensively, while the large
round prewar types disappeared quickly. Although they seem huge today,
the FT-243 and HC-6/U holders, and many others, were miniature types
developed for military use during the war to both save space and get
more out of the limited supply of radio-grade quartz available during
the war. There were so many FT-243 units made that well into the 1990s
the surplus supply was still being used up.

The move to flexible coax-cable feedlines in amateur radio and
elsewhere was a direct result of WW2 developments in the manufacture
of such cables. "RG-8/U" was originally a military designation

Semiconductor type numbers such as 1N5408 and 2N2222 are the result of
a parts numbering system developed during WW2. Ironically, the system
was developed for tubes - think of the 2E26, 2C39, 3E29, 6C21, etc.
It was short-lived as a way to name new tube types, but lives on today
for semiconductors.

There are many other examples. And it wasn't just hams who benefited.

Of course a lot of these developments were done by private industry,
not by military personnel. But the developments were a direct result
of military needs and funding.

For a link to MOST of the quartz crystal holders go to this link:

http://s88932719.onlinehome.us/crystal_holders.htm

[save it off-line, it was made by Brian Carling AF4K]

During WWII the USA set priorities on who should get what for raw material, test equipment, facilities. Priority #1 was the Manhattan Project (to develop the atomic bomb). Priority #2 was to quartz crystal unit production with the civilian overseer being Galvin Mfg (changed to Motorola after the war). Main reference is Galvin's own biography book and the oft-repeated Bottoms paper (Bottoms was a participant, now deceased) found in frequency control special interest group at the IEEE and on several crystal companies today. Based on the Bottoms paper, USA production of quartz crystal units from about 60 different companies (most of them small firms) was about one million units per month in the last three years of WWII.

The major source of natural quartz was Brasil (a neutral in WWII) and much research and trial began after WWII to grow quartz crystals from seed material, slightly impeded by a similar method for producing germanium and silicon ingots of astonishing purity. Both "man-made" efforts succeeded to make the color TV industry possible (both NTSC and PAL systems required a quartz crystal in each set to regenerate the color sub-carrier signal).

The "HC-" prefix to quartz crystal HOLDERS is apparently a USA DoD designator prefix and was not used during WWII. To use those required more refined techniques in plating electrodes on quartz, "cold-welding" (a new technology adapted from the exploding semiconductor industry) to those electrodes and adaptation of "microwelding" developed for vacuum tube manufacturing (sometimes called "spot-welding" by those who haven't done it...an "eye-opener" and "eye-closer" if done through a stereo microscope). The vast majority of quartz crystal units made since around 1960 have the metal holder under various "HC-" prefixes.

> Semiconductor type numbers such as 1N5408 and 2N2222 are the result of

> It was short-lived as a way to name new tube types, but lives on today
> for semiconductors.

Transistors were not available until 1947 and then not in production. High voltage breakdown silicon diodes such as the 1N5408 (3 A, 1 KV, plastic case) would not be available until around 1960. The "1Nxxxx" and "2Nxxxx" and (rare but there) "3Nxxxx" designations were done by the electronics industry, not by the military. During WWII the military had its own variation on vacuum tubes with labels of "VT-nnn" while the electronics industry used the civilian industry designations exsiting before USA's entry into WWII. The USA military stopped using the "VT-nnn" designator after WWII.

Many high-power vacuum tubes used manufacturer's own part designations which the electronics industry accepted so as to ease their own burden in the fantastic explosion of electronics parts that began with TV set production once the civilian 'radio' industry restarted after WWII.

> Of course a lot of these developments were done by private industry,
> not by military personnel. But the developments were a direct result
> of military needs and funding.

Almost ALL developments in electronics began as industry projects, even the IC. There is some controversy in the industry whether Intel or TI made the "first IC." Intel's first IC was for an Asian customer to use in a four-function calculator. Nearly all digital IC part numbers have number suffixes which follow the original TI line of "54" and "74" prefixes. Intel went on to gain a virtual monopoly on CPUs for PCs while there is just no stopping TI to date.

While RCA Corporation developed the first CMOS junctions (and ICs), the semiconductor industry here and in Europe developed the Advanced CMOS juntions having idle current nearly down to leakage current yet with clock speeds so high that power drain is specified by operating speed. TTL logic structures have specified idle time current drain; Advanced CMOS logic does not.

Major semiconductor corporations have their own part numbers for ICs, such as the one-"chip" PLL frequency source made by Analog Devices and favored by many QRP afficionados in amateur radio. Analog Devices grew out of the George Philbrick company which began with vacuum tube operational amplifier plug-ins (two tubes in a special holder which contained the circuitry).

Addenda: I've never seen any FT-243 holder quartz crystals in USA-made CB transceivers. There might be some among roughly a million CBs made in the USA (millions more born off-shore). This post was done on 6 May 2010.

==> HAMVENTION®: GET INVOLVED AT HAMVENTION!

As an 18-wheeler pulls away from the ARRL warehouse loading dock,
destined for the Dayton Hamvention® -- only a week away -- ARRL
Marketing Manager Bob Inderbitzen, NQ1R, looks on with a sense of
relief: "There go all of the supplies for our huge exhibit area -- ARRL
EXPO." In 2005, Inderbitzen helped introduce ARRL EXPO to Hamvention
where it has become a centerpiece of the event.

"ARRL EXPO is the place to meet ARRL program representatives and
explore the very best of our Amateur Radio Service," he said. "I am
excited about this year's planning that includes 20 exhibits and a team
of 140 volunteers, officials and staff. Our rallying message for all
radio amateurs is 'Get Involved.' Get involved in emergency
communications. Get involved in radiosport and contesting. Get involved
with a local school. And get involved with a radio club. If there's one
```

thing we know about radio amateurs, we know that the most active hams are involved and connected." The booths throughout the ARRL EXPO will help underscore the "Get Involved" message. Read more here <http://www.arrl.org/news/get-involved-at-hamvention>.

==> HAMVENTION®: JARL TO ACCEPT APPLICATIONS FOR IARU REGION 3 AWARD AT DAYTON HAMVENTION®

Representatives from the Japan Amateur Radio League (JARL <http://www.jarl.or.jp/English/0-2.htm>) will be accepting applications for the IARU Region 3 Operating Award <http://www.nzart.org.nz/awards/iaru-region-iii-log.pdf> at the Dayton Hamvention. JARL will forward the applications to the New Zealand Association of Radio Transmitters (NZART <http://www.nzart.org.nz/awards/iaru-region-iii-log.pdf>), the award administrator. NZART will then send applicants their award certificate with any endorsements after Hamvention. There are 35 available entities for the IARU Region 3 Award. Hams who present seven QSOs will be awarded the Basic Award. Hams who present 15 QSOs will be achieve the Silver Endorsement, while those who present 20 QSOs will receive the Gold Endorsement. The award fee is US $4 or four IRCs. Read more here <http://www.arrl.org/news/jarl-to-accept-applications-for-iaru-region-3-award-at-dayton-hamvention>.

==> IARU NEWS: AMATEUR RADIO EXHIBITION REFLECTS UNITY IN EUROPE: EUROPEAN RADIO SOCIETIES EXHIBIT IN EUROPEAN PARLIAMENT

Last week, representatives from various European Amateur Radio societies came to the Espace Léopold -- the European Parliament building located in Brussels, Belgium -- to provide information about the Amateur Radio Service to members of the European Parliament. Using the motto European Amateur Radio Benefiting Society, the event was sponsored by the IARU Region 1 EUROCOM Working Group and European Parliament Member (MEP) Birgit Sippel, who supports the goals and the socio-political importance of Amateur Radio. Before the event, she said it was her hope that the exhibition will offer the possibility for her colleagues to become informed about the Service: "I am very much looking forward to sharing information on this Amateur Radio Service with my colleagues, their assistants and anyone else who is interested." The European Parliament is the legislative body of the European Union (EU). Read more here <http://www.arrl.org/news/amateur-radio-exhibition-reflects-unity-in-europe-european-radio-societies-exhibit-in-european-parli>.

==> FOCUS ON CLUBS: MANY RADIO CLUBS COULD LOSE TAX-EXEMPT STATUS IN 2010

Changes made three years ago to the federal tax laws could cause many radio clubs to lose their tax-exempt status this year. Clubs that are tax-exempt under Section 501(c) of the Internal Revenue Code must file the required IRS annual returns or reports before the deadline, which is May 15 for those with calendar years.

"Many clubs have, at some time in the past, applied for tax-exempt status as charitable organizations under Section 501(c)(3), as civic leagues under Section 501(c)(4) or as recreational clubs using Section 501(c)(7)," said ARRL Southwestern Division Director Marty Woll, N6VI. "Years ago, any club with gross receipts averaging less than $25,000 per year was not required to file annual returns with the IRS; however, after 2006, such clubs had to file a Form 990-N, a simple 'electronic postcard' with minimal information, by the 15th day of the fifth month after the close of each fiscal year. Some clubs may not have been aware of this new requirement or didn't bother to comply. Even those that filed in a prior year may have neglected to keep up with the required filings as officers changed from year to year." Read more here <http://www.arrl.org/news/many-radio-clubs-could-lose-tax-exempt-status-in-2010>.

==> COMING UP IN QST: TAKE A LOOK AT THE JUNE ISSUE!

The June issue of QST -- our annual Field Day issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting -- including a look at one of the ARRL Homebrew Challenge winners and an abundance of articles relating to Field Day, Amateur Radio's number one operating event -- the upcoming issue of QST has something for just about everyone.

If April showers bring mayflowers, and Mayflowers bring pilgrims, what does June bring? Why, ARRL Field Day of course! The June issue of QST is chock-full of articles all about Field Day. Gary Gordon, K6KV, tells readers how to put three transceivers on one antenna using a decoupling network in conjunction with bandpass filters in his article "HF Yagi Triplexer Especially for ARRL Field Day." Find out how Geoff Haines, N1GY, found a way to quickly install a portable mast for your Field Day antenna in "A Vehicle-Mounted Mast for Field Operating." ARRL Field Day means many different things to different hams, but no matter what, the day is your day to promote Amateur Radio. Warren L. Rothberg, W4WR, explains just how to do this in "Will the Real Field Day Please Stand Up?" And as much fun as hams have on Field Day, safety is always important. ARRL Field Day Manager Dan Henderson, N1ND, explains how you can be safe and still have loads of fun in "A Safe Field Day is a Fun Field Day." Jim Riley, KB9CYL, a long-time Field Day chairman shows how you, too, can have a successful Field Day in his article, "On 15 Years as a Field Day Chairman."

For only $28.36, Donald W. Huff, W6JL, built a 40 meter band 50 W linear amplifier for his QRP rig, taking the prize for the lowest cost entry in the ARRL's Homebrew Challenge II. Find out how to build this nifty amp in his article "Homebrew Challenge II Winner #1 -- The Lowest Cost Entry." QST Technical Editor Joel Hallas, W1ZR, understands that with today's technology, today's hams are not as concerned with receiver sensitivity as they once were, but sometimes too much of a good thing can be detrimental. Discover how to get top performance from your rig with his tips in "Receiver Sensitivity -- Can You Have Too Much?" Read a never-before-told account of how General George S. Patton

and the Allied Forces used top-level wireless intelligence messages -- codenamed ULTRA -- during World War II in Geoffrey Pidgeon's article "General Patton and His Use of ULTRA."

ARRL Contributing Editor Rick Palm, K1CE, takes a look at the Yaesu FT-250R and FT-270R handheld 2 meter FM transceivers in this month's Product Review. "The FT-250R and the FT-270R are well built and rugged, with plenty of audio for noisy environments," he reports. "The FT-270R has a larger display and keypad buttons and more features, but the FT-250R includes a desktop charger and sells for a bit less. Either of these radios would be a fine addition to your equipment belt." ARRL Technical Advisor Bruce Prior, N7RR, finishes his review of mass-produced dual-lever keyer paddles. This month, he takes a look at four paddles, two heavy keys of classic design and two low volume keys from newer companies: the Vibroplex Iambic Standard, the MFJ 564B Deluxe Iambic Paddle, the Vibroplex Code Warrior Junior, the Elecraft HexKey, the K8RA P-2 Key and the W5JH Black Widow Kit.

Of course, there are the usual columns you know and expect in the June QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, Hamspeak and more -- including a special ARRL Field Day advertising pull-out. Look for your June issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <https://www.arrl.org/join-arrl-renew-membership/>.

==> ARRL FIELD DAY MERCHANDISE NOW AVAILABLE

<http://www.arrl.org/shop/Field-Day-Supplies/> How can you be the best-dressed ham at your Field Day site this year? When you wear the official 2010 ARRL Field Day shirt -- accompanied by the 2010 ARRL Field Day hat -- of course! Field Day -- Amateur Radio's largest on-the-air operating event -- is just a little more than six weeks away, so be sure to get your shirts, hats and pins, as well as the new ARRL Field Day Handbook for Radio Amateurs and coffee mugs before they run out. Field Day shirts are offered in sizes Small-4XL and are royal blue with the 2010 Field Day logo on the left chest; the back of the shirt says "Amateur Radio -- Goodwill • Service • Fun!" with www.arrl.org underneath. Fulfill all your Field Day apparel needs at the Field Day Supplies section of the ARRL Web site <http://www.arrl.org/shop/Field-Day-Supplies/>.

==> THE LAST TECH-PLUS LICENSE TO EXPIRE IN JUNE

In February 1991, the FCC dropped the 5 WPM Morse code requirement for new Technician licensees, and in 1994, it created a new class of Amateur Radio license: the Technician-Plus, also called Tech-Plus. This new license differed from the Technician license in that Tech-Plus licensees had passed the code test and had more operating privileges on HF. Patricia Phillips, N3IGI, of Pittsburgh, Pennsylvania, received her Technician licensee on June 12, 1990. On March 21, 2000, she upgraded

her license to Tech-Plus, and, at the same time, renewed her license, now set to expire June 12, 2010. This makes Phillips the last Tech-Plus in the FCC database. If she renews her Amateur Radio license, she will be a Technician. Read more here <http://www.arrl.org/news/the-last-tech-plus-license-to-expire-in-june>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including filing comments and replies with the FCC on a number of matters pertaining to Amateur Radio, launching our new Web site, organizing new operating events, preparing for WRC-12, offering more on-the-air options from W1AW and more. This installment covers the month of April. Read more here <http://www.arrl.org/news/arrl-in-action-what-have-we-been-up-to-lately-21>.

==> SEARCH FUNCTION CAPABILITY OPTIMIZED ON NEW WEB SITE

After a few adjustments, the search function on the new ARRL Web site -- powered by Google, the number one search engine in the world -- is fully operational. When you put a search term into the "Website Search" box, you have the option of searching by category -- News, Exam Sessions, Clubs, Hamfests, Contests, Licensing Classes, Special Events or Member Directory -- or just performing a general search. Results will show the topic and its summary. In the case of news articles or features, you will see the title and its first sentence or two. We are continually updating and tweaking features on the Web site. If you would like to recommend something, or if you encounter problems on the site, please click on the "Having Trouble? <http://www.arrl.org/support>" link, found at the bottom of each page on the Web site. Fill out the form fields; make sure that the Department Contact shows "Website Support." Someone will respond to you shortly.

==> SOLAR UPDATE

Tad "Beyond the fixed stars and variable suns and telescopic planets, astronomical waifs and strays <http://en.wikisource.org/wiki/Ulysses_%28novel%29/Chapter_17>" Cook, K7RA, reports: Sunspot activity made a strong return this week. Last Friday, April 30, sunspot group 1064 appeared and then faded after the third day. On Sunday, groups 1065, 1066 and 1067 appeared, and the next day group 1063 made reappearance, along with new group 1068. Group 1069 arose on May 4 and group 1070 on May 5. Group 1069 grew quickly and the sunspot number rose from 61 to 70, and then 77 on Wednesday. Wednesday's sunspot number is the highest it has been for Solar Cycle 24; in fact, it has not been to this level in nearly four years. The last time it was this high was back on May 28, 2006 when it was 78. Sunspot group 1069 has grown so much that it is 17 times the size of each of the other five sunspot groups. This level of activity should continue for the next few days. Along with increased sunspots, we saw

rising geomagnetic activity. The peak days were Sunday and Monday, when the planetary A index was 39 and 27, and the K index went as high as 6 over several three hour periods. Look for more information on the ARRL Web site on Friday, May 7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by James Joyce's Ulysses <http://en.wikisource.org/wiki/Ulysses_%28novel%29/Chapter_17> (Chapter 17).

==> SILENT KEY: NOTED DXER VINCE THOMPSON, K5VT

Dr Vinson Thompson, K5VT, passed away on April 26 from acute myeloid leukemia, diagnosed only four weeks before his death. He was 67. An ARRL Life Member and former Chairman of the ARRL DX Advisory Committee (DXAC), Thompson was famous in DX and contesting circles and held radio licenses from more than 60 countries. One of the founding members of the VooDoo Contest Group, he traveled extensively throughout Africa, as well as the rest of the world, and has operated from many African nations while practicing in-country as a surgeon with the World Health Organization (WHO). Read more here <http://www.arrl.org/news/noted-dxer-vince-thompson-k5vt-sk>.

==> SILENT KEY: FORMER HUDSON DIVISION DIRECTOR LINDA FERDINAND, N2YL

Linda Ferdinand, N2YL, passed away May 4 due to complications from chronic heart failure. She was 63. Ferdinand served as Hudson Division Vice Director from 1980-1982, and as Division Director from 1985-1987. She was an extremely proficient Morse code operator and was active in the ARRL National Traffic System at the local, section, region and area levels, as well as serving in the Transcontinental Corps. An ARRL Life Member, Ferdinand received an advanced degree in computer science and worked for IBM, transitioning their mainframe computers to large computers based on small microprocessors running in parallel. She was also a member of the ARRL A-1 Operator Club <http://www.arrl.org/a-1-op>, FISTS <http://www.fists.org/> and the Six Meter International Radio Club (SMIRK <http://www.smirk.org/>). Ferdinand was an avid quilter and lover of cats. She is survived by her husband Gary, W2CS, and son Brian, N2EKS, daughter Lauren and two grandchildren. Services are scheduled for 1 PM on Friday, May 7 at Medway Congregational Christian Church in Climax, New York. The family requests that contributions be made in Ferdinand's memory to AnimalLovers <http://www.animalovers.org/> (The Animal Welfare League of the Greater Capital District).

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/multimedia> This week, the FISTS Spring Sprint is May 8.The CQ-M International DX Contest and the VOLTA WW RTTY Contest are May 8-9. Next week, the His Majesty King of Spain Contest (CW) and the Manchester Mineira All America CW Contest are May 15-16. The Run for the Bacon QRP Contest is May 17. All dates, unless

otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> SHOW YOUR SUPPORT FOR W1AW

To date, 872 donors have contributed $56,432 to the W1AW Endowment Campaign. This biannual fund is nearing its 2010 goal of $65,000. "Every contribution ensures the future of W1AW and the memory of Hiram Percy Maxim," said ARRL Chief Development Officer Mary Hobart, K1MMH. "Not only is W1AW one of the most recognized call signs in the world, it represents the history and traditions of Amateur Radio. Our members have been very generous so far and I'm confident that we will meet -- and surpass -- the goal." To donate to the W1AW Endowment Campaign, please visit the W1AW Endowment page <http://www.arrl.org/w1aw-endowment-fund> on the ARRL Web site. You may also send in your donation via mail to W1AW Endowment, ARRL, 225 Main St, Newington, CT 06111. Contact ARRL Chief Development Officer Mary Hobart, K1MMH, via e-mail <k1mmh@arrl.org> or by phone at 860-594-0397 for more information or with any questions you may have.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, May 23, 2010, for these online course sessions <http://www.arrl.org/online-course-registration> beginning on Friday, June 4, 2010: Amateur Radio Emergency Communications Level 1; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1708 - May 7 2010

Amateur Radio Newsline report number 1708 with a release date of
Friday, May 7, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Skywarn hams on alert as tornadoes hit in
mid-America, a solar wind brings DX to six meters, the first ever US
based 4 meter beacon comes on the air, a ham is arrested for allegedly
harassing police and fire communications in California and a Nebraska
radio club gets an unexpected reward for its public service during a
recent telephone outage. Find out the details on Amateur Radio
Newsline(tm) report number 1708 coming your way right now.

RESCUE RADIO: SKYWARN TEAMS ON ALERT AS TORNADOS HIT MID AMERICA

Skywarn volunteers supported local rescue radio operations during the
recent tornado outbreaks in Alabama, Arkansas, Mississippi and
Tennessee. This, as severe weather outbreaks developed in what the
Storm Prediction Center described as particularly dangerous situation
and prompting the activation of severe weather watches. Volunteers
like these hams near Little Rock, Arkansas, quickly went on alert:

--

Actual on-scene audio - hear it in the MP3 version of this weeks newscast
downloadable at www.arnewsline.org

--

Since April 24th, fifteen of the sixteen tornado related deaths were
recorded in Mississippi, Arkansas, and Tennessee with five coming at one
time in Choctaw County, Mississippi. During this severe weather outbreak
Skywarn volunteers provide ground intelligence to local emergency managers
and the National Weather Service.

Meantime, as part of their training, a German Skywarn Team is visiting the
United States this month. Their mission is to obtain information to use in
the continued development of a similar program in their home nation. So
far the team has visited the National Weather Center and is planning stops
at Emergency Management programs across the United States southern Great
Plains. (Story material and audio provided by KC5FM)

**

PROPAGATION: GEOMAGNETIC STORM BRINGS AURORA OPENING TO NORTH AMERICA

A high-speed solar wind stream hit Earth's magnetic field the night May 2nd and into the early hours of May 3rd. The eruption sparked a geomagnetic storm that lasted more than 15 hours, and bringing with it some interesting propagation.

In Scandinavia, the Northern Lights were so bright they could be seen through the glow of the midnight sun. Meantime, what's reported as a red colored aurora spilled across the Canadian border and were spotted in several Northern U-S states. Some good 6 meter auroral DX is reported to have accompanied the aurora.

Later in the day on May 3rd there was a major opening trans-equatorial opening to the Caribbean and South America DX Stations reported as heard or worked in eastern and central North America during the storm included P43JB on Aruba on 50.099 running CW, FM5CD in Martinique on 50.096 using CW, PJ2LS in the Netherland Antilles on 50.162 SSB and LU8YD in Argentina on 50.120 also on SSB.

Meantime a West to East E-skip opening brought the mountain states into southern California. Stations like K0DU were strong enough to be recorded off an FT-847 transceiver and an AEA loop only 6 feet off the ground at the Newsline studio. This, as he worked a station in grid square D M Zero 4. --

Actual off-air audio - hear it in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

To the North, Dave Bernhardt, N7DB, in Boring, Oregon, says over the V-H-F Reflector that his first contact was at 17:11 UTC with Dave Wagner, W7CI at down in Sierra Vista, Arizona. He also heard beacons from California, Mexico and South America.

Perhaps the biggest surprise was the AM activity detected up on 50.4 MHz. While signals were far to weak to detect much audio or even get a callsign, the type of fading indicated them to be E-Skip and likely from the same regions being heard down the band on C-W and SSB.

In all it was a good day on the 50 MHz band for any ham who bothered to listen or call CQ. As we go to air, sporadic openings on 6 meters are still continuing. (ARNewsline(tm))

**

PROPAGATION TEST: NEW US BASED 4 METER BEACON ON THE AIR

A United States based 4 meter beacon is on the air, but its not a ham radio system. On Monday May 3rd , the 70.005 MHz beacon using the Experimental call WE9XFT took to the airwaves from Bedford, Virginia with a power level that may make it receivable in the British Isles and other areas of Europe.

The new beacon is the brain child of Brian Justin, WA1ZMS. Back in January Justin filed an application with the FCC for a Special Temporary Authority to operate a propagation beacon in the 4 meter band for domestic as well as trans-Atlantic reception tests. The FCC granted the request as a non-amateur experimental license since there isn't a 70 MHz Amateur band in the United States.

WE9XFT is running 3 kilowatts Effective Radiated Power on 70.005 MHz beaming towards Europe. It is operating 24 hours a day and the experimental license is valid until September 1st. Reception reports should be sent to Brian by e-mail to wa1zms (at) att (dot) net. (VHF Reflector)

**

ENFORCEMENT: HAM ARRESTED FOR MAKING ON AIR THREATS ON POLICE AND FIRE FREQUENCIES

Authorities have arrested a 29-year-old San Jacinto, California ham who investigators allege interrupted police and fire radio communications and made threats over the air during a two day period. Mark Abramowicz, NT3V, has been following the story and has more:

--

Police closed in on Irene Levy, KJ6CEY, just seconds after she made a transmission on a Hemet California police frequency using a commercial H-T.

Investigators from Hemet as well as Cal Fire say the unauthorized, random transmissions made from Levy's mobile home in San Jacinto went beyond nuisance calls. Hemet Police Sgt. Mark Richards was quoted by The Press-Enterprise newspaper in Riverside, California, as saying Levy disguised her voice as a man and made references to the deaths of police and firefighters and made bomb threats. He said some of the transmissions came during a Cal Fire search and rescue call, a major traffic accident, and a brush fire.

Richards report stated the transmissions began May 1 and ended in the early morning hours of May 3. Richards said in the report that direction-finding equipment helped locate Levy, who in one of her transmissions on May 2 suggested "police would never find her."

Richards report said that during the raid on her trailer, police seized 11 radios, seven scanners, radio frequency lists, computer equipment and miscellaneous radio gear. He says in the report they also seized Levy's Technician license, showing it had been issued in September 2009.

Levy was charged on suspicion of making terrorist threats, falsely reporting a bomb threat, and maliciously interrupting, disrupting, impeding or interfering with a transmission on a public radio frequency. Sources close to the investigation tell Amateur Radio Newsline that authorities believe Levy acted alone and without the knowledge of her husband, Michael, KE6ALV, who has been licensed since 1993.

On her (now removed) QRZ.com bio page, Levy claims to have a General Mobile Radio Service license, but the call sign is actually registered to her husband, Mike. Levy also claimed she monitored the Keller Peak repeater as well as the Hemet repeaters.

Levy says in that bio she was active on Citizens Band radio prior to getting married and described herself as a CB'er at heart.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V.

--

As this report is being prepared, Levy is being held in lieu of $50000 bail. Its unknown if she is represented by counsel. (ARNewsline(tm), published news reports)

**

ENFORCEMENT: FLORIDA UNLICENSED BROADCASTER FINED $10000

Still with enforcement news, the FCC has affirmed a $10,000 fine it had previously issued to Balthazard Senat. This for his alleged operation an unlicensed radio transmitter on 91.3 MHz in Orlando, Florida.

Back on March 2nd, the Commission's Tampa Office of the Enforcement Bureau issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Senat. Since that time Senat has not filed a response to the NAL.

On April 29th and based on the information before it, the FCC has affirmed the forfeiture and given Senat the customary 30 days to pay or to file an appeal. (FCC)

**

ENFORCEMENT: FCC GOES AFTER ILLEGAL CB AND UNWANTED REPEATER USERS

Since the beginning of the year the FCC's enforcement effort in the private radio area seems concentrated in two areas. These are violations of the Part 95 rules governing the 11 meter Citizens Radio Service and ridding repeaters of unwanted users in the Amateur Service.

A quick count of enforcement letters issued since January 1st shows nine warning notices sent to individuals for violations of Part 95. Most of these were for running overpowered transmitters on 11 meters that were causing interference to their neighbors home electronics. In each case the C-B operator in question was given 10 days to respond to the FCC and to outline the specific steps taken to bring that 11 meter CB station into compliance with the Commission's rules.

In the area of ham radio, four hams have received warning letters ordering them to stay off of various repeaters. In each case the FCC notes that the letter's recipient was requested by the repeater owner or control operator to refrain from using the system but either refused or failed to do so. So the Commission is now backing the system licensees and control stations by ordering the unwanted users to cease using the repeaters. If they fail to

heed the agency's enforcement warning they could face such penalties as a license modification proceeding to restrict the frequencies upon which a given ham may operate, a fine or even revocation of their Amateur Service licenses.

In going through the various warning letters we found none dealing with the situations on various frequencies on 75 and 20 meters that seem to be the talk of the amateur radio community. Nor was there anything mentioned in regard to collecting any fines previously issued to those the agency determined to be in violation of the Part 97 rules. The only non-repeater issue we found went to a ham accused of operating with a call other than the one assigned to him.

All of these letters are available to the general public on the FCC's Enforcement Web page. It can be found at http://www.fcc.gov/eb/AmateurActions/ (ARNewsline(tm))

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KC4HAZ Repeater Network serving all of Central Florida.

TAX LAW: IF YOU ARE A 501C RADIO CLUB YOU MUST FILE A FEDERAL TAX RETURN

If you are a radio club that holds federal government tax exempt status, listen up. You are in danger of loosing that standing unless you file a tax statement with the Internal Revenue Service by May 15th. So says the ARRL in a special bulletin issued earlier this week. Bruce Tennant, K6PZW, has the details of what federally tax exempt clubs have little time to do:

--

Changes made three years ago to federal tax laws could cause many radio clubs to lose their tax-exempt status this year. To protect themselves, clubs that are tax-exempt under Section 501(c) of the Internal Revenue Code must file the required IRS annual returns or reports before the deadline, which is May 15th for those organizations with corporate calendar years.

Many clubs have, at some time in the past, applied for tax-exempt status under Section 501(c)(3) as charitable organizations, Section 501(c)(4) as civic leagues or Section 501(c)(7) for recreational clubs. Years ago, any club with gross receipts averaging less than $25,000 per year was not required to file annual returns with the IRS. However, after 2006, such clubs have been required to file a Form 990-N. This is a simple postcard with minimal information. It is due by the fifteenth day of the fifth month after the close of each fiscal year.

Some clubs may not have been aware of this new requirement or didn't bother to comply. Even those that filed in a prior year may have neglected to keep up with the required filings as officers changed from year to year.

Well it turns out that Section 6033(j) of the Federal Tax Code provides that failure to file Form 990, 990-EZ or 990-N for three consecutive years results in revocation of an organizations tax-exempt status as of the filing due date for the third return. That filing date for calendar year 2009 is less than two weeks away.

If you are a club officer and are uncertain who is responsible for IRS filings or whether such filings are current, you should determine your fling status as soon as possible and take immediate steps to file the current and any missed prior-year IRS forms. Going forward, your club's board should assign the responsibility for compliance filings with a designated officer and document that responsibility in the written job description for the position so that subsequent holders of the office are made aware of the requirements. This is the only way to make certain that you tax exempt status remains in place.

For the Amateur Radio Newsline, I'm Bruce Tennant. K6PZW, in Los Angeles.

--

The bottom line: If you have questions about your club's status, you may wish to consult a Certified Public Accountant or other tax advisor versed in not-for-profit tax law. (ARRL)

**

RADIO LAW: NAB PRESIDENT SAYS NO TO FCC BROADBAND PLAN

A war, albeit right now only a war of words appears to be brewing between television broadcasters and the FCC. This over the latter's desire to reclaim spectrum from the former to be auctioned to wireless broadband providers. Amateur Radio Newsline's David Black, KB4KCH, is at the South-East bureau with more:

--

Terming the Federal Communications Commission's National Broadband Plan as the "great spectrum grab," National Association of Broadcasters president Gordon Smith told a broadcaster gathering at the now concluded NAB Conference in Las Vegas that that the spectrum reclamation portion of the plan was an example of unnecessary government intervention.

In what the trade press has described as a gloves-off keynote speech to the annual convention Smith told the audience that broadcasters were not a spectrum ATM, and that the government needed to do a thorough inventory of where the spectrum is, who has it, how it is being used. It also has to look carefully at compression technologies before squeezing broadcasters out.

Smith also said that the FCC plan does not recognize the lifesaving or lifeline values of broadcasting. He noted that the people who would be

most hurt by the new broadband plan are the disadvantaged and the elderly. He noted that fifteen percent of households rely exclusively on free, over the air television and that number appears to be growing in the post Digital Television transition.

The FCC wants another 120 MHz from television broadcasters within five years. Its proposing to get it via a voluntary program in which broadcasters would be compensated from some of the proceeds from the spectrum, which would be re-auctioned for wireless broadband. But the agency has also noted that it might unilaterally reallocate spectrum if broadcasters failed to cooperate.

But in interview a week earlier Smith signaled that he was going to be tough on the plan, which he has compared to an offer from the Mob that carries with it an implied threat.

--

The FCC believes that the current television broadcast spectrum is the best place for the expansion of broadband. If it cannot cut a deal with the broadcast community and acts unilaterally, the matter could wind up in the courts and bring broadband expansion to a halt for years. (Multichannel News)

**

ON THE NET: ALCATEL - LUCENT ANNOUNCE NEW HIGH SPEED DSL

Alcatel-Lucent Bell Labs say they can now send data at rates of up to 300 megabits per second down telephone lines. According to a press release the Lab achieved 300 megabits per second over at a distance of 400 meters and 100 megabits per second over 1 kilometer by making use of the so called "DSL Phantom Mode". This involves the creation of a virtual or "phantom
"
channel that supplements the two physical wires that are the standard configuration for copper transmission lines.

The increase in transmission capacity arises from the use of analog phantom mode technology in combination with other industry standard techniques. These are the vectoring that eliminates crosstalk between copper wires, and bonding that makes it possible to take individual lines and combine them.

This DSL services make use of the High Frequency radio spectrum to send data over telephone lines. There is no mention in the Alcatel-Lucent Bell Labs press release of how much radio interference this new development could possibly cause. To date DSL has had no impact on ham radio operations and there's little reason to believe this could change. (Southgate)

**

RESTRUCTURING: CAYMAN ISLANDS GET NEW HAM REGULATIONS

The Cayman Islands Governor in Cabinet has adopted a set of regulations to govern that nations amateur radio service, The effect of the new law will be to create a plan for the issuance of amateur radio licenses by the Cayman Islands Information and Communications Technology Authority to persons who have satisfied the certification process by way of examination of their knowledge and competence with respect to electricity and radio, including amateur radio apparatus.

The new rules also allow for the recognition of licenses issued by the United Kingdom and other countries which have agreed to grant, with respect to the Cayman Islands, reciprocal amateur radio operating privileges. Also they will ensure compliance with international standards, including the requirement that amateur radios be operated without any financial interest and at the same time minimize the likelihood of interference caused by, and suffered by, amateur radio operators.

These new regulations were developed in collaboration with the Cayman Amateur Radio Society. As an Information and Communications Technology Authority agent, the society will administer the examination for license applicants. The new regulations came into effect following their publication in the Cayman Islands Gazette on March 29th. (Via e-mail)

**

NEW PRODUCTS: CUBA UNVEILS FIRST DOMESTICALLY PRODUCED TRANSCEIVER

Cuba is going into the ham radio transceiver business. At least domestically. This as a prototype of new Caiguaran low cost 1.8 MHz transceiver was presented at the 8th Congress of the Cuban Ham Radio Federation.

The prototype transceiver was manufactured at one of the factories controlled by the Cuban Ministry of Informatics and Communications. It is designed to put out 20 watts on 160 meters but with additional hardware it can also operate on the 80 and 40 meter bands.

The Chair of the Cuban Ham Radio Federation is Pedro Rodriguez, CO2RP. He told the Cuban News Agency that the first 600 units are ready for delivery to Cuban amateur radio operators. The radios primary purpose is to help to support emergency communication in Cuba. (Southgate)

NEW PRODUCTS: WOUXON US TO INTRODUCE CHINESE BUILT HT AT HAMVENTION

If the information on the Hamvention Yahoogroups Reflector is correct, then there is a new player in town to rival Alinco, Icom, Kenwood and Yaesu in the dual band handheld radio competition for your dollar. The new company is called Wouxon dot US and their first radio for the United States market is their new model KG-UVD1P 2 meter and 70 centimeter Dual-Bander will be available at the Dayton Hamvention.

In a news release, Wouxon.US says that it will be at booth is #172, just inside the North Hall entrance and to the right. The company says that it will have 100 units plus accessories packed up and ready to go at a special

Hamvention price. The news release did not specify what that price will be, but from Hong Kong dealers advertising on eBay, these radios, complete with a rechargeable battery, desktop drop-in charger, auxiliary earphone and a belt clip seem to sell for an average of around $80 plus $40 shipping to the United States That said, few expect the price to be that low in a retail environment such as Hamvention or your favorite radio store.

The home company is Quanzhou Wouxun Electronics Co. Ltd. of Fujian, China. It says that the new ham radio dual bander has received FCC certification. It's approved as FCC ID: WVTWOUXUN04. More on the new radio is on-line at www.Wouxun.US (Hamvention Yahoogroups, Wouxon.US Web page)

THE CHANGING OF THE GUARD: FAMED DX'ER VINCE THOMPSON, K5VT - S.K

The changing of the guard in ham radio continues with word of the passing of famed DX'er Vince Thompson, K5VT who passed away on April 24th. Thompson was best known as a DX-peditioner known for activating many African countries, and a founder of the Voodoo Contest Group. A physician, K5VT trained doctors overseas on his trips, and practiced medicine in the Phoenix, Arizona area. Thompson also served as the ARRL Southwestern Division representative to the Leagues's DX Advisory Committee (ARRL)

**

THE CHANGING OF THE GUARD: FORMER ARRL SW DIVISION DIRECTOR GARY STILLWELL, KI6T -S.K.

And Gary Stillwell, KI6T, served as Southwestern Division Vice Director in the 1973 era when he was W6NJU has also become a Silent Key. Stillwell had relinquished the post when he moved to Sacramento in Northern California for his work with the California Transportation Agency also known as Caltrans. He was a well known DXer at the top of the DXCC honor roll. Stillwell was also the founder and original owner of The Radio Place, a Sacramento store serving the needs of that city's amateur radio community. (ARRL)

MOONBOUNCE: K1JT GIVES INITIAL KP4AO REPORT

One of the organizers of the recent EME operation using the 1000 foot dish in Arecibo, says the operation was a definite success. Amateur Radio

Newsline's Jim Davis has the details:

--

WSJT inventor Joe Taylor, K1JT, has provided a report on the recent KP4AO amateur radio moon bounce operation from the Arecibo Observatory in Puerto Rico.

According to K1JT, the wall of stations calling was simply incredible. A rough estimate suggests that the Arecibo group may have worked something like 20% of the callers potentially workable on SSB, 10% of those workable on CW, and only a few percent of those workable on JT65.

From Joe's memory he says that the log shows nearly 240 completed QSOs with some 57 DXCC entities, in a total of 8 operating hours. He notes that they made recordings of the whole 432 MHz EME sub-band for most of the time KP4AO was on the air. He says that in due course it will be possible to "tune the band again carefully picking out callsigns. If and when this is done he will be happy to post a list of received callsigns.

In the meantime Joe has some requests to all who took part in the operation. I f you worked KP4AO with a setup significantly smaller than is normally required for EME, please send him a short note describing your antenna, receiver, and transmit power. Or if you only heard KP4AO, please also send him a note describing your antenna and receiver. Joe's direct e-mail is k1jt(at) arrl (dot) net.

I'm Jim Davis, W2JKD.

--

Again, if you missed that e-mail address where to send your reports its k1jt(at) arrl (dot) net. (Southgate)

WORLDBEAT: UK PREPARES FOR DIGITAL RADIO SWITCHOVER

The United Kingdom's Digital Economy Bill which will force all analog radio off the air in coming years has become law. The move came barely a week after a British Parliament's House of Lords report questioned the wisdom of moving all national and regional radio broadcasting to Digital Audio Broadcasting. It echoed many criticisms voiced over the bill, which is likely to consign all FM and AM radios to landfill in five years, except for listening to ultra-local FM stations.

But digital radio switch-over arguments are unlikely to cease for long time. This is because the new law constructs a framework of conditions rather than fixing a date. It requires Digital Audio Broadcasting coverage and listening-share to reach a certain level before FM switch-off can be initiated. This in turn will be followed by a delay before the transmitters are actually turned off. (Electronics Weekly)

**

HAM RADIO IN SPACE: BEQUEST WILL HELP LAUNCH FUNCUBE

Great Britain's Radio Communications Foundation has announced that it is handling a legacy donation that will help fund the AMSAT-UK FUNcube project. This grant to the Foundation stipulates that the funding must be used for the development of a suitable amateur satellite project.

So the Radio Communications Foundation went looking for a suitable candidate. It found what it was looking for in a proposal from AMSAT-UK to use the inheritance to help with the FUNCube educational project that has the aim of educating young people about radio, space, physics and electronics.

By way of background, FUNcube is the first ever cubesat designed to benefit young spectators and is expected to be the first British cubesat to reach space. Its target audience consists of primary and secondary school children. The FUNcube satellite itself will feature a 145 MHz telemetry beacon that will provide a strong signal for the students to receive.

A tentative launch date is sometime this fall. This, after FUNcube completes its flight readiness review. (Southgate)

**

HAM RADIO IN SPACE: THE SMALL SATELLITES SYMPOSIUM

The Small Satellites Systems and Services Symposium takes place in Madeira, Spain, from May 31 to June 4, 2010 and this year features a CubeSat Workshop. This biennial event covers all aspects of small satellite programs such as flight experiences, mission definition, technologies, launches, ground segment and data exploitation. An abstract of the papers to be presented can be seen in PDF format at tinyurl.com/2423paz. (AMSAT-UK)

**

WORLDBEAT: NEW 10 METER FM REPEATER IN PORTUGAL

A new 10 meter FM amateur radio repeater has come on the air in Portugal. Sponsored by the Ham Radio Association of Beira Alta, CQ0HAR operates on European repeater channel RH4 with an input of 29.5 and an output of 29.6 MHz. A 67 hertz CTCSS tone is required for access CQ0HAR. More on the system is on-line at www.ct1arb.com (EC1AME)

**

DX

In DX, PA7JWC, will be active as 3B8/PA7JWC from Pereybere, Mauritius Island (AF-049) between May 5-22nd. Activity will be on the HF bands and 6 meters, using CW, SSB, RTTY and PSK31. QSL via the LoTW or to his home callsign direct or by the Dutch QSL Bureau.

DF5AU will be active portable H B Zero from Lichtenstein through May the 12th. His operation will be on the HF bands using CW and SSB with his focus on 80 meters. QSL via his home callsign.

IK8HCG will be active as IB0R from Ventotene Island during the RSGB Islands on the Air Contest July 24th and 25th. QSL via his home callsign, direct only.

Lastly, listen out for Bulgarian special event station LZ2010KM to be on the air through May 31st. This activity is to celebrate St. Kiril and Methodius' Day. Operations will be on all bands and modes. QSL to LZ1BJ, by the Bureau (preferred). Logs will be uploaded to LoTW.

(Above from various DX news sources)

THAT FINAL ITEM: WINDSTREAM COMMUNICATIONS DONATES $5000 TO LINCOLN ARC

And finally this week an old adage that says do good to others and it will be repaid in droves has come true for one radio club. A club that has long been known for its dedication to public service. Bill Pasternak, WA6ITF, is here with the details:

--

Windstream Communications has announced that it is donating $5,000 to Nebraska's Lincoln Amateur Radio Club. This, in appreciation of the group's communications support to residents and the Lincoln-Lancaster County 911 center during the telecommunications outage that took place back on April 1st.

As previously reported, the outage occurred after an upgrade to an internal timing system in a switch that hosts the 911 routing system. Roughly 36,000 customers lost landline phone service. The failure of the routing switch interrupted 911 service for cell phones and landlines in at least a dozen counties for nearly 15 hours, forcing authorities to take reports in person and by e-mail. It also caused a callout of local ARES and Lincoln Club members who were stationed on street corners and at strategic public service agencies as a replacement for the interrupted 911 service.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

Windstream Communications announced the $5000 donation to the Lincoln Amateur Radio Club on Monday, May 3rd. At same time its spokesman said that the company had determined that timing cables were not in conformance with industry and company specifications. As a result, this had caused the phone system outage. (Lincoln Journal-Star, K0NEB)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is

newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award closes on May 30th. That gives you only a few short weeks to nominate a deserving teen or pre-teen radio amateur for this yearly ham radio honor.

Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, saying 73 from Reno, Nevada, and we thank you for listening.

Source record: 1253

Just got back from the local ham radio club's May meeting. Field Day planning was a big subject on the agenda.

Looks like our group will be using the same location as last year, with several HF and one or two VHF/UHF stations. We're considering a GOTA station as well.

Need to get my FD antennas, ropes, coax, extension cords and slingshot launcher checked out and ready to go. Also some interconnect cables, the ethernet switch and of course decide which keys to bring.

Anybody else planning to go out on FD this year?

73 de Jim, N2EY

0000Z May 8 through 0000Z May 16
from St. Louis, Missouri
The St. Louis and Suburban Radio Club, Inc. (SLSRC)
www.slsrc.org
SLSRC will celebrate the 83rd anniversary of Charles Lindbergh's historic trans-Atlantic flight. Operations will primarily be on 40 and 20 meter CW, SSB, & PSK - but operations may also be on other bands as conditions warrant. Lindbergh, in the Spirit of St. Louis, left St. Louis from Lambert Field at 8:30 AM Central Standard time on May 12, 1927 in-route to Curtiss Field and the beginning of the Atlantic crossing. For information, target frequencies and daily times, on-line log search, certificate & QSL information please visit www.slsrc.org. You will also find PDFs of our HF and IRLP/Echolink operating times and volunteer operators. Individual SLSRC members will operate daily from May 8 through May 14. On Saturday, May 15 the club will setup a Field Day like station and operate from 9AM CDT to 7PM CDT to end the week long operating event.

> Anybody else planning to go out on FD this year?

We're going to do a fair sized effort again under W3YA.

It will be high power, probably 3 stations. I have to confess though, I would really like to get back to a low power setup. By the time we put up and take down 3 portable towers, a couple beams - especially the 40 meter, and the wire antennas for the lower bands, we are pretty beat up Sunday afternoon.

Best field day I ever had was with a low power effort, two stations, two OCF dipoles, and some quick setup shelters. We got as many points as the high power efforts, and it only took a half hour to tear down, vs 4 for the big gun setup. I'm going to have to try to talk them into that next year.

Not to be picky about details, but are you sure the original message
stated "midnight sun"?
North Cape at 71deg 10' North, which is the absolute northernmost well-known
geographical point of Scandinavia, is not able to see a full midnight sun
until May 13th.
I suspect the report may have stated "mid-day sun" ...

==> FCC NEWS: FCC PROPOSES ADDITIONS, CHANGES TO AMATEUR 5 MHZ
ALLOCATION

Acting on a 2006 Petition for Rulemaking filed by the ARRL, the FCC has
issued a Notice of Proposed Rule Making (NPRM), ET Docket No 10-98 to
modify the rules that govern amateurs' secondary use of five

channels in the 5 MHz frequency range known as 60 meters. The
proposed changes would substitute a new channel for one that is seldom
available because of occupancy by the fixed service, which is primary
in this range. Also proposed is an increase in power from 50 to 100 W
effective radiated power (ERP) and the addition of CW, PSK31 and
PACTOR-III modes with provisions to ensure that such operations would
be compatible with the primary service. Read more here
<http://www.arrl.org/news/fcc-proposes-additions-changes-to-amateur-5-mhz-all
ocation>.

==> HAMVENTION: FCC FORUM AT DAYTON HAMVENTION TO FEATURE FCC EMERGENCY
COMMUNICATIONS EXPERT
```

The annual FCC forum at the 2010 Dayton Hamvention is scheduled for Saturday, May 15 9:15-10:15 AM in Forum Room 3 at the Hara Arena. Moderating again for 2010 will be Bill Cross, W3TN, of the FCC's Mobility Division. Cross's portfolio of responsibilities includes the Amateur Radio Service rules. Also speaking at this year's forum will be Curt Bartholomew, N3GQ, of the FCC's Public Safety and Homeland Security Bureau. Missing from this year's program will be Laura Smith, FCC Special Counsel who is responsible for Amateur Radio enforcement issues. She is unable to attend due to a previously scheduled family commitment.

==> PUBLIC SERVICE: NATIONAL HURRICANE CENTER'S WX4NHC SETS ON-THE-AIR STATION TEST

The annual WX4NHC On-the-Air Station Test from the National Hurricane Center (NHC) in Miami will take place Saturday, May 29, 1300-2100 UTC. "The purpose of this annual station test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible," said WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. "This is not a contest or simulated hurricane exercise." WX4NHC also will be testing new computers and software, as well as conducting operator training, and NHC Director Bill Read, KB5FYA, will be at WX4NHC making contacts. Read more here <http://www.arrl.org/news/national-hurricane-center-s-wx4nhc-sets-on-the-air-station-test-2>.

==> ARRL FOUNDATION: ARRL FOUNDATION AWARDS 66 SCHOLARSHIPS IN 2010

The ARRL Foundation Board of Directors is pleased to announce the scholarship recipients for 2010. Each year, the Foundation's Directors have the honor and privilege of selecting Amateur Radio operators who will receive monetary assistance to further their undergraduate or

graduate education. For 2010, the Foundation awarded 65 annual scholarships to young Amateur Radio operators valued at $71,450, almost $17,000 more than awarded in 2009. Four new scholarships were added for 2010: The Ted, W4VHF, and Itice, W4LVV Goldthorpe Scholarship; The Magnolia DX Association Scholarship and The Gwinnett Amateur Radio Society Scholarship. A second scholarship for the Bill, W2ONV and Ann Salerno Memorial Scholarship was also added this year.

The application period for ARRL Foundation Scholarships opens October 1 each year and closes on February 1 the following year, with awards announced in May. Descriptions of all the available scholarships and selection criteria, as well as application instructions and forms can be found on the ARRL Foundation pages of the ARRL Web site. Beginning fall 2010, the application process for ARRL Foundation scholarships will "go green," with application forms and transcripts accepted via electronic means only. Click here <http://www.arrl.org/news/arrl-foundation-awards-66-scholarships-in-2010> for a list of the scholarship recipients.

==> ARRL FIELD DAY: ARRL ATLANTIC DIVISION TO HOST FIELD DAY WEBINAR

Periodically, the ARRL's Atlantic Division hosts a "webinar" -- an interactive Web-based seminar, designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. On Wednesday, May 19 at 9 PM EDT, Atlantic Division

Director Bill Edgar, N3LLR -- along with some "Field Day Experts" -- will present a Field Day-oriented webinar entitled "Making the Most of Field Day." Moderated by ARRL Regulatory Information Branch Manager and Field Day Manager Dan Henderson, N1ND, the webinar will share information, hints and tips to individuals and groups to maximize their Field Day experience -- not just in terms of points, but in gaining valuable experience and knowledge to help groups and individuals to help maximize their Field Day fun! Read more here <http://www.arrl.org/news/arrl-atlantic-division-to-host-field-day-webinar>.

==> ARRL FIELD DAY MERCHANDISE NOW AVAILABLE

How can you be the best-dressed ham at your Field Day site this year? When you wear the official 2010 ARRL Field Day shirt -- accompanied by the 2010 ARRL Field Day hat -- of course! Field Day -- Amateur Radio's largest on-the-air operating event -- is just a little more than six weeks away, so be sure to get your shirts, hats and pins, as well as the new ARRL Field Day Handbook for Radio Amateurs and coffee mugs before they run out. Field Day shirts are offered in sizes Small-4XL and are royal blue with the 2010 Field Day logo on the left chest; the back of

the shirt says "Amateur Radio -- Goodwill • Service • Fun!" with www.arrl.org underneath. Fulfill all your Field Day apparel needs at the Field Day Supplies section of the ARRL Web site <http://www.arrl.org/shop/Field-Day-Supplies/>.

==> INTERNATIONAL: CANADIAN HAMS MAKE USE OF NEW PRIVILEGES

After several years of hard work by the Radio Amateurs of Canada (RAC) and Industry Canada (IC) -- Canada's equivalent to the FCC -- Canadian amateurs received privileges on 2200 meters (135.7-137.8 kHz) at the first of the year. Scott Tilley, VE7TIL, of Roberts Creek, British Columbia, and John Gibbs, VE7BDQ, of Delta, British Columbia, completed the first official Canadian two-way 2200 meter QSO on April 24. Using CW, the Canadian amateurs reported strong signals during daylight QSO on 137.100 kHz. Roberts Creek and Delta are about 41 miles (66 km) apart. Gibbs used a homebrew tube transverter at 100 W output into a short top-loaded backyard wire vertical, while Tilley was running 400 W from a homebrew FET transmitter into a 60 foot top-loaded wire antenna. "As well as heralding the arrival of a new 'top band,' the QSO demonstrates that even amateurs located in typically small city-sized lots can enjoy the challenges that 2200 meters has to offer," Tilley told the ARRL. "Hopefully many other Canadian amateurs will soon be melting solder to join the fun on our new band!" More information on Canadian 2200 meter activity may be found on Tilley's Web site <http://www3.telus.net/sthed/argo/> and at the VE7SL Radio Notebook Web site <http://members.shaw.ca/ve7sl/136.html>.

==> GOOD NEWS FROM RADIO KUWAIT: 7150 KHZ AND 7190 KHZ BOTH FREE!

The IARU Region 1 Monitoring System is ever vigilant in monitoring the amateur bands for intruders. It is ably led by Coordindators Wolf Hadel, DK2OM, and Uli Bihlmayer, DJ9KR. To aid in their work they initiated an online reporting system via intruderalert@iaru-r1.org last year. On April 12, Uli first observed a shortwave station on 7150 and 7190 and alerted the monitoring group to listen and send reports to their appropriate authorities. Through combined efforts, Uli identified the station as Radio Kuwait. Once the station was identified, Uli immediately informed the German Federal Net Agency (Bundesnetzagentur) to monitor the QRGs and to send an official complaint to KWT. Also he sent a FAX and an e-mail to the Embassy of KWT in Berlin and e-mails to Radio Kuwait (radiokuwait@radiokuwait.org <http://us.mc506.mail.yahoo.com/mc/compose?to=radiokuwait@radiokuwait.org>) and to the Ministry of Telecoms in Kuwait. Read more here <http://www.arrl.org/news/good-news-from-radio-kuwait-7150-and-7190-khz-both-free>.

==> SOLAR UPDATE

Tad "The Sun does not shine upon this fair earth to meet frowning eye <http://ebooks.adelaide.edu.au/d/dickens/charles/d54nn/>s" Cook, K7RA, reports: Sunspots disappeared again. After a strong

showing and nine days of sunspots, there have been four days with no sunspots. No indication when they will return, although the STEREO image <http://stereo.gsfc.nasa.gov/> shows an active area coming next week. With no sunspots again, perhaps our focus should return to low frequencies. Tom V. Segalstad, LA4LN, reports from Norway that a new temporary beacon on 509 kHz will be transmitting from grid-square JP20LL using a 35 meter (115 feet) tall vertical and 5 W until the middle of June. Look for more information on the ARRL Web site on Friday, May 14. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Charles Dickens' The Life and Adventures of Nicholas Nickleby <The%20Life%20and%20Adventures%20of%20Nicholas%20Nickleby> (Chapter 6).

==> THIS WEEK ON THE RADIO

This week, the Portuguese Navy Day Contest is May 15. The His Majesty King of Spain Contest (CW) and the Manchester Mineira All America

CW Contest are May 15-16. The Run for the Bacon QRP Contest is May 17. Next week, the Baltic Contest is May 22-23. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page

<http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, May 23, 2010, for these online course sessions <http://www.arrl.org/online-course-registration> beginning on Friday, June 4, 2010: Amateur Radio Emergency Communications Level 1; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

**

THE SOCIAL SCENE: HAMVENTION 2010 IS ON

The doors of the 2010 Dayton Hamvention are opening as we go to air. Since 1952 the Dayton Hamvention has been sponsored by Dayton Amateur Radio Association. It has grown to be the world's largest amateur radio gathering, attracting hams from throughout the globe. And according to Assistant General Chairman Mike Kalter, W8CI, this years Hamvention is dedicated to radio clubs and the work that they doworldwide:

--

Kalter: "This years theme is amateur radio clubs worldwide. We decided that as our club is a big club. The Dayton Amateur Radio Association. And it takes a lot of people to put on something like this, so we were thinking that there are a lot of clubs that do a lot of good in the world so we thought that this would be our theme this year. We even have a Club of the Year award that we instituted this year."

--

Mike Kalter made that comment in an interview with RAIN's Hap Holly, KC9RP. At the same time he said that 2010 may be a year of growth for the Hamvention itself:

--

Kalter: "We have sold more tickets to date than we did last year at this time. We have more inside exhibits and more Flea Market spaces sold than we did last year at this time. So it looks as though we are going to be successful on those counts."

--

And what can visitors expect this year? Again, Mike Kalter, W8CI:

--

Kalter: "We have some interesting things that are going to happen. "Discover Homebrew" will be in our demonstration area where anyone wants to bring their homebrew project and set it up.

"We will have a ham radio (training) class this year.

"Returning again this year will be the emergency communications display. That's been a big hit so we have that back as well.

"Also we have some D-Star information. The clubs W8BI Gateway will be linked to the 30-B reflector during Hamvention weekend.

"And this year at the (W8BI) special events station we will have speech units so that the visually impaired are able to participate -- so we are pretty excited about that. The exact frequencies are listed at our website at www.hamvention.org"

--

Kalter also says that there will be a lot of interesting speakers leading this years forums:

--

Kalter: "Dr. Paul Bernhart, KF4FOR, the Senior Research Physicist for the Naval Research Lab. He heads up the HAARP project at the Haval Research Lab in Alaska and Aricebo in Puerto Rico. He will be talking about HAARP which is the High Frequency Active Auroral Research Program.

"Gordon West will be there taking stage. He's going to talk about the latest in DSP speakers from Clear Speech and others. If you have never seen a Gordon West forum, they are always a lot of fun.

"Carole Perry is a professional educator from New York City and she will be presenting her Youth Forum.

"And Van Hoi, VR2HF, will be talking about what its like to be a ham in Hong Kong.

"The BalloonSat: forum will be back with Bill Brown, WB8ELK. And we are actually planning a balloon launch on Friday afternoon."

--

By way of background, the Dayton Hamvention started out life as the Southwestern Ohio Hamvention. The first organizational meeting was held in January 1952 with the convention taking place on March 22nd at the old Biltmore Hotel in downtown Dayton. And at that first gathering there were only seven exhibitors and six forums. Even so, it was a far greater success than the Dayton Amateur Radio Association could

have ever anticipated. They had hoped to attract 300 visitors but over 600 showed up. Now, almost six decades after John Willig, W8ACE, had asked the Dayton Amateur Radio Association to sponsor a ham radio convention the Dayton Hamvention remains the shining star in the ham radio sky.

We will have a full report on Hamvention 2010 next week. Meantime you can hear Hap Holly's complete interview with Mike Kalter, W8CI, by directing your web browser to www.therainreport.com and downloading this weeks Rain Report file. (ARNewsline(tm), RAIN)

**

RESTRUCTURING: 70CM IN JEOPARDY DOWN-UNDER

Radio Amateurs in Australia are worried that they may soon loose access to some or all of the 420 to 450 MHz band. This after the Australian Communications and Media Authority issues a statement on future use of the spectrum from 403 to 520 MHz.

Attachment 1 of the statement shows proposals for 420-430 MHz, there is no mention of the Amateur Service. With regard to 440-450 MHz the section on Proposed Transition Arrangements says that users in 452.5 to 453 MHz and 462 and 462.5 MHz spectrum will need to relocate either elsewhere in the 450 to 470 MHz band, or into another part of the 400 MHz band. Spectrum in 440 to 450 MHz will also be made available in consultation with the Department of Defense on a temporary basis.

The Australian Communications and Media Authority also propose to increase the number of UHF Citizen Band Radio Service channels from 40 to 80 by the use of 12.5 kHz channel spacing. More is on-line at www.acma.gov.au/WEB/STANDARD/pc_312108 (WIA)

**

RADIO RECORDS: FIRST ROS CONTACT ON 500 KHZ

While it may not yet be legal to use in the United States FCC rules, the first Q-S-O using the new ROS digital protocol has been made on 500 kHz between G0NBD and G4WGT.

The contact took place on April 30th over a 30 mile path. Initially they used ROS 500/16 mode and then the ROS E-M-E mode. During the contact power was reduced from 3 watts output to 30 milliwatts. The antennas were 35ft top loaded whips.

Practical Amateur antennas for this band are very hard to come by due to the wavelengths involved. It can require 50 or more watts of transmitter output just to get 100 milliwatts Effective Radiated Power. The success of the contact between the two U-K hams is proof that efficient weak signal modes such as R-O-S can help extend the communications range that is achieved using simple albeit inefficient antennas such as those used in this record setting test. (Southgate)

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving greater Dayton, Ohio on FM and D-Star.

ENFORCEMENT: KJ6CEY PLEADS NOT GUILTY TO ALL CHARGES

A follow-up to last weeks story on the ham radio operator accused of making bomb threats, jamming police and fire channels, and interrupting the regions emergency radio traffic. Irene Marie Levy, KJ6CEY, has pleaded not guilty to felony charges of making criminal threats and making a false bomb report. She is also facing misdemeanor counts of maliciously interrupting a communications transmission and obstructing arrest.

According to the Desert Sun on-line newspaper, the intentional interference with police and fire radio communications allegation involved a bomb threat. Court papers say that it also contained what the newspaper terms as "specific" and "unequivocal" threats made to a certain sergeant, leading him to fear for the safety of his family,

Hemet police Lt. Mark Richards says that Levy was arrested at her home after investigators tracked her down by investigators using radio direction finding techniques according. A felony settlement conference was set for Wednesday May 12th and a preliminary hearing was tentatively scheduled a week later on May 20th. (Desert Sun, other published news reports)

**

TELECOMMUNICATIONS POLITICS: CONGRESSIONAL LEADERS SAY FCC MUST MOVE AHEAD ON BROADBAND

Two Washington lawmakers say that Congress should get ready to write new telecommunications policy, if needed. This following a recent court ruling that threw into doubt the government's ability to move forward with an ambitious broadband plan. Representative Henry Waxman and Senator John Rockefeller said the Federal Communications Commission should also consider short-term options, including a controversial idea to bring broadband under a stricter regulatory regime.

In a recent letter to the FCC, the lawmakers said that it is vitally important the agency be empowered to move forward with its National Broadband Plan unveiled earlier this year. To accomplish these objectives, the Commission should consider all viable options. This includes a change in classification of broadband, provided that doing so entails a light regulatory touch, with appropriate use of forbearance authority.

Reclassification would mean putting broadband under the same set of rules governing telephone services rather than its current status as a lightly regulated information service. For broadband providers, the option could mean more restrictions on pricing and having to share lines with competing Internet service providers. In the longer term, the lawmakers said that, if there is a need to craft a new telecommunications policy, that Congress will do so.

As previously reported here on Newsline, in April a Federal appeals court ruled that the FCC lacked the legal authority to stop Comcast from blocking online applications for distributing television shows and other large, bandwidth-hogging files. The FCC has since acknowledged the ruling does question its authority over broadband, but it vowed to press ahead. The big players in the industry including such entities as Verizon and Comcast fear reclassification would be overly burdensome and would likely challenge such a move in the courts. (Published news reports)

**

TELECOMMUNICATIONS POLITICS: STUDY SAYS 33% OF ALL AMERICANS LACK BROADBAND

Meantime, the FCC has determined that about one third of all Americans do not have a broadband Internet connection at home. According to a report from the regulatory agency the main barriers to adoption appear to be cost and literacy.

The FCC is working on a plan to deploy nationwide wireless broadband. The usage study titled Broadband Adoption and Usage in America was released at the Brookings Institute. But in the report there appears to be no mention of how many Americans do not want or feel that they have no need for any kind of broadband connectivity. (Telecom News)

**

HAMVENTION(R) NEWS: JARL TO ACCEPT IARU REGION 3 AWARD APPLICATIONS

The ARRL reports that representatives from the Japan Amateur Radio League will be attending the Dayton Hamvention and will accepting applications for the International Amateur Radio Union Region 3 Operating Award. The JARL will forward the applications to the New Zealand Association of Radio Transmitters who administers the award. NZART will then send applicants their certificate with any endorsements after Hamvention closes.

To be eligible for this honor, applicants must present a completed application, listing at least seven contacts from entities in IARU Region 3 whose amateur societies are member societies of the International Amateur Radio Union. No QSL cards are necessary, but only QSOs made after April 5, 1982 are eligible.

There are 35 available entities for the International Amateur Radio Union Region 3 Award. Hams who present seven QSOs will be awarded the

Basic Award. Hams who present 15 QSOs will be achieve the Silver Endorsement, while those who present 20 QSOs will receive the Gold Endorsement. The award fee is $4 or four International Reply Coupons. (ARRL)

**

THE SOCIAL SCENE: HAM RADIO EXHIBIT OPENS AT EUROPEAN PARLIAMENT

An amateur radio exhibition has opened in the European Parliament. Organized by the IARU Region 1 EUROCOM working group, the display focuses on emergency communications, education and space, with the aim to raise awareness among European politicians of the important role played by radio amateurs.

The new exhibition is sponsored by Mrs. Brigit Sippel. It was opened by IARU Region 1 President, Hans Blondeel Timmerman, PB2T. Photos of the event and further details are available on the IARU Region 1 website at www dot iaru-1 dot org. (IARU)

**

NAMES IN THE NEWS: GI4FUM FUN DXPEDITION TO MOZAMBIQUE

Some names in the news. First up is David Hutchinson, GI4FUM who is also known as 3DA0DJ. He is sponsoring a DXpedition to Bilene, Mozambique this coming October.

Bilene is a coastal resort on the Indian Ocean about 150 kilometers north of Maputu. GI4FUM says that he will fly from London's Heathrow Airport to Johannesburg and drive up to Mozambique. He says that plans are to run a station for Jamboree on the Air with local scouts on the weekend of October 16th and 17th and that they will also enter a station for CQWW SSB over the weekend of the 30th and 31st.

GI4FUM adds that there will be numerous opportunity for individuals to operate under their own C91 callsigns as well as sun bathing on an Indian Ocean beach in late African spring. More information on this fun sounding DX adventure is on line at www.3da0ss.net (Southgate)

**

NAMES IN THE NEWS: DIANA ENG, KC2UHB, DEVELOPS COLLAPSIBLE FABRIC YAGI

Designer and electronics enthusiast Diana Eng, KC2UHB, has developed a collapsible fabric Yagi for portable amateur radio satellite operation. In her column in MAKE Magazine she writes that one of her favorite ham radio activities is making contacts on satellites. She says that it is really fun to know that you're controlling something that's receiving and sending communications from space.

Eng notes that communicating with satellites means carrying a big Yagi antenna around. So she decided to use her fashion sewing skills to make a collapsible fabric Yagi antenna that's much easier to transport.

Eng notes that the actual antenna design is based on the work of engineer and writer Kent Britain, WA5VJB. The difference is the materials used in the final assembly. Thin brass tubing is used for the antenna elements while rolled up cloth doubles as both the boom and as a carrying case for the finished antenna. This makes it easily transportable as well as quick to set up in the field or for classroom satellite demonstrations. Full instructions on how to build one is on line at http://blog.makezine.com/archive/2010/05/collapsible_fabric_yagi_antenna.html (MAKE Magazine)

**

NAMES IN THE NEWS: K7BW TO OPERATE 6 METERS FROM SAN ANDREAS

Dennis Motschenbacher, K7BV will be active as 5J0BV from San Andreas Providencia from June 9th to the 20th. This to once again try and give out this extremely hard to contact location to Europeans on 6 meters. While not as rare in the USA, there still appears to be a large demand for this location world-wide even after Dennis's two previous operations devoted to 6 meters. More on this operation including QSL routing is on-line at tinyurl.com/2unguet (K7BV)

RADIO STRANGE: BROADCAST TRANSMITTER STOLEN WHILE ON THE AIR

Here's a story that may be hard to believe, but its true. The London Daily Record newspaper reports that a broadcast transmitter has been stolen while it was on the air.

The newspaper says that Mike Smith's Log In To Lunch show was being broadcast on Lanarkshire's radio station L107 when the airwaves went dead. After investigating the reason behind the sudden silence the station owners found that the transmitter had been taken from the 17th floor of an office building in the town of Hamilton.

Station managers told the police that the transmitter is about the size of a large refrigerator. Surveillance cameras from the office block show two men pushing it out on a dolly and loading it into a van. A potential audience numbering close to 600,000 listeners may have heard the popular station go off the air.

You can read more at http://tinyurl.com/3ay3492. And you thought these things only happened at remote, isolated hilltop radio sites. (RW)

**

EMERGING TECHNOLOGY: CELLPHONE RADIATION IMPROVES THE THOUGHT PROCESS OF MICE

>From the science page comes this interesting story regarding radiation from cellular telephones that claims it can improve your intelligence, but only if you are a mouse.

According to Gary Arendash of the University of South Florida in Tampa and colleagues, research being conducted using mice prone to an animal form of Alzheimer's disease showed that long-term exposure to electromagnetic radiation typical of cell phones slowed and reversed the course of the illness. Moreover, a similar exposure in normal mice for two hours a day over seven to nine months improved their cognitive abilities compared with control specimens.

Arendash and colleagues provided their data in a recent issue of the Journal of Alzheimer's Disease. They also say that the findings provide striking evidence for both protective and disease-reversing effects of long-term exposure to radiation at cell phone level.

But other experts cautioned that the science in the study while mainstream is still in its very early stages. Dr. Alan Lerner is a Neurologist at Case Western Reserve University in Cleveland, Ohio. In a public e-mail he said that the researchers took an an innovative approach to modulating Alzheimer's disease models in mice. but he said it's too early to say whether the finding have any relevance to humans. (Science OnLine)

**

HAM RADIO IN SPACE: SATELLITE LAUNCH DELAY

The launch of two amateur radio satellites, STUDSAT and TIsat-1, on the Indian PSLV-C15 launcher has been postponed until June. The rescheduling of the launch took place after a marginal drop in the pressure in second stage of the vehicle was noticed during the mandatory checks carried out on the launch vehicle. (AMSAT-UK, Southgate)

**

HAM RADIO IN SPACE: NEW AO-51 POWER MANAGEMENT SYSTEM ENABLED

A new power management system has been enabled on the Amsat Oscar 51 ham radio satellite. According to control station Drew Glasbrenner, KO4MA, if everything works right, the repeater should run at 1.01 watt while in sun, and 290 milliwatt while in eclipse and after exiting eclipse until the batteries recover to around 7.9 volts. Observations from the southern hemisphere while entering and leaving eclipse would be very helpful. They can be sent by e-mail to KO4MA (at) amsat dot

org. (ANS)

**

HAM RADIO NEAR SPACE: ALIEN-1 HAM BALLOON A BIG SUCCESS

The flight of the ALIEN-1 high altitude balloon package, built by three students at Reading School, in the United Kingdom has proved to be an overwhelming success. According to several sources the 434.075 MHz beacon worked as expected and over 3000 pictures were taken during the flight.

Due to the 434.075 MHz telemetry messages being sent at just 50 baud the payload could only send down one telemetry string every 15 seconds.

The highest altitude achieved by ALIEN-1 was 33.158km. This is believed the third highest in UK records. Some of the photos taken by ALIEN-1 Pictures on line at http://www.flickr.com/photos/alienhab/ (Southgate, WIA News)

**

ON THE AIR: TAIWAN SPECIAL EVENT STATIONS

On the air, keep an ear open for special event stations 3H100TW, 3T100TW and 3T0TW. All are operational from the capital city of Taipei, Taiwan, through December 31st. QSL's for all three stations should be sent via the BV bureau.

**

ON THE AIR: THE GREAT PATRIOTIC WAR

And if you worked Ukrainian special event station EO65JM between May 1st and the 15th you talked to an operator helping to commemorate the 65th anniversary of the victory in the great Patriotic War. The QSL Manager for this event is K2PF.

**

DX

In DX word that TU5KG will soon be fishing again around Crozet and Kerguelen islands. He has secured the callsigns FT5WQ and FT5XT and hopes to become active during shore leaves. No exact dates for his operation or QSL route has yet been announced

PA7JWC portable 3B8 is spending his holidays on Mauritius. He will be on the island through May 22nd or thereabouts. QSLs via his home call or via Logbook of the World.

K8LJG will be active portable 4 from Amelia Island, Florida in the Florida State North East Group through May 25th. He will be operating on 20 through 10 meters using CW and SSB, on the IOTA frequencies. QSL to John C. Kroll, K8LJG, 3528 Craig Drive, Flint, Michigan, 48506 in

the USA.

Lastly, VE3ZZ will be active as VE3ZZ stroke VY2 from Prince Edward Island between July 21st and the 26th. His operation will include an entry in the RSGB Islands on the Air Contest on July 24th and 25th as VY2X. QSL via his home callsign.

(Above from various DX news sources)

**

THAT FINAL ITEM: CONGRATULATIONS TO "BIG JIM" DAVIS W2JKD ON HIS 50 YEAR BROADCAST CAREER

And finally this week, here's a voice that's well known to listeners to this news service. It belongs to a ham who is about to pass a truly important milestone in his career and in his life. Take a listen:

--

Archive audio of W2JKD

--

Yes, that's Amateur Radio Newsline's longtime news anchor Jim Davis, W2JKD. And in just a few short weeks Jim will be celebrating his 50th year as a professional broadcaster both behind the microphone and behind the scenes.

Jim Davis, W2JKD, is a native of Buffalo, New York. He is a second generation and life long broadcaster who followed in the footsteps of his mother who was a singer on WKBW radio. In fact, "Big Jim" as he's known to his many friends began his career on June 19th, 1960 at a small radio station in Cheektowga, New York whose call letters were WNIA. Jim was only 14 at the time but convinced station managers that he was a lot older and went on the air using the name Mac Maguire. The first record he ever played was "Cathy's Clown" by the Everly Brothers. In the five decades he has been on the air, Jim has interviewed numerous politicians, radio, TV and film stars and has played an estimated 600,000 songs.

Over the years Jim has had successful runs at some of the nation's biggest radio stations. These include such well known calls as WOR - FM in New York City; KHJ in Los Angeles; CKLW in the "Motor City" of Detroit and Chicago's famed WLS-AM. While employed by RKO General Broadcasting, Jim was twice nominated for Billboard Magazine's "Major Market Air Personality Of The Year."

In 1981, Jim entered senior management by becoming Vice President and General Manager of Radio Station WVAF in Charleston, West Virginia. Currently, he is Vice President and General Manager for Florida's Vero Beach Broadcasters, L.L.C. which operates four FM and two AM stations. In December of 2008, and in addition to keeping the radio stations on the air, Jim was appointed Chief Operating Officer of Home Town Cable

Plus. This is a company that provides a state-of-the-art fiber-to-the-premises system in Port St. Lucie, Florida delivering High-Speed Internet, Cable TV, Telephone and Security Alarm Monitoring. Jim has also authored a book entitled "The Sales Success Spectrum-A System Of Radio Sales" which is used as a teaching and training manual radio stations.

In his spare time, Jim Davis is a licensed Multi Engine Commercial Instrument rated pilot and owner of a Piper Pathfinder. As a Civil Air Patrol member he has been trained as a Search and Rescue pilot and participates in looking for downed aircraft survivors.

Jim has been an amateur radio operator since age twelve and currently holds an Extra class license. He received a "designated examiner" status from the American Radio Relay League in 1985.

And since the early days of this news service when we were still the Westlink Radio Network, Jim has been an important part of the Newsline family. To many radio amateurs around the world W2JKD is considered as being "the voice" of Amateur Radio Newsline and a person that they have come to rely on for ham radio news since the early 1980's.

So please join us in congratulating Jim Davis, W2JKD, on an astonishing 50 years as a broadcaster who has contributed so mightily to the ongoing success of the radio broadcast industry and for his years of service to amateur radio as well. As Jim would likely be the first to tell you, its all been a truly fun ride. (ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award closes on May 30th. That gives you only a week or so to nominate a deserving teen or pre-teen radio amateur for this yearly ham radio honor.

Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> PUBLIC SERVICE: AMATEUR RADIO OPERATORS "STAND DOWN" FROM CHINESE
EARTHQUAKE RELIEF

The earthquake that struck China's Qinghai province on April 14
killed more than 2000 people and left thousands injured and homeless.
According to Fan Bin, BA1RB, of the Chinese Radio Sports Association
(CRSA), relief efforts are continuing for those left homeless. Amateur
radio operators from Beijing, Sichuan, Shandong, Anhui, Qinghai and
Jiangsu were widely involved in the disaster relief actions, traveling
to the disaster center. Working through the poor weather conditions,
they helped with transportation of medicines, tents, food and clothes
to the disaster area. The Amateur Radio operators were even directly
involved in disaster rescue activities -- one Beijing Amateur Radio
rescue team saved six people. Read more here

==> ARRL AUDIO NEWS TO RETURN MAY 27

After a hiatus of four months, the ARRL Audio News is scheduled to return Thursday, May 27. With the advent of the new ARRL Web site, we have had to make some changes in the way the Audio News is presented. It will only be available as one mp3 file; we will no longer be breaking it up into segments. For the time being, it will not be available by telephone, but that feature may return in the future. You can find the ARRL Audio News here <http://www.arrl.org/arrl-audio-news> on the ARRL Web site.

==> THE 2010 ARRL EXPO AT THE DAYTON HAMVENTION®: LOVING EVERY MINUTE OF IT!

It just wouldn't be a "real" Hamvention if the weather didn't cooperate, and on Friday -- the first day of the 2010 Dayton Hamvention -- the humidity was brutal. Be it too much rain, too much sun (or not enough!) or maybe even a snowstorm, thousands of radio amateurs flock to Hara Arena. But late on Friday afternoon, the sweltering atmosphere gave way to clear skies and frisky breezes, a harbinger of the rest of the weekend.

Inside Hara, aisles were packed with hams from all over the world seeking the latest in Amateur Radio technology, products, gadgets, gizmos and more. It's said that if you can't find it at Dayton, it just doesn't exist. If you were looking for the latest in top-of-the-line transceivers, there were more than a few to choose from. If you needed a 45 tube for your 1920s-era TNT oscillator, take your pick from the more than 200 exhibitors and vendors - not to mention the acres of flea market booths -- attending Hamvention.

The largest exhibit at Dayton is the ARRL EXPO. Almost 150 ARRL staff members, officers, Board members and volunteers made their way to Dayton, bringing with them the best that Amateur Radio has to offer. With 25 exhibits and activities located in the EXPO area -- ranging from youth activities, kit building, QSL card checking and an expanded ARRL Bookstore -- throngs of amateurs wound their way through to check everything out. Read more here <http://www.arrl.org/news/the-2010-arrl-expo-at-the-dayton-hamvention-loving-every-minute-of-it>.

==> ARRL'S ANNUAL DONOR RECEPTION WELCOMES RECORD CROWD

The annual reception for ARRL donors in Dayton welcomed the largest attendance since its inception in 2002. Nearly 150 donors who contributed $1000 or more during the previous year enjoyed the reception on May 13 at the Meadowbrook Country Club in Clayton, Ohio. Guests at the reception included international visitors IARU President Tim Ellam, VE6SH; IARU Region 2 Secretary Ramon Santoyo, XE1KK; IARU Secretary Rod Stafford, W6ROD; IARU Region 1 President Hans Blondeel Timmerman, PB2T, and his wife Margareet, K2XYL; Seike Hidefumi, JA5CKZ;

Keko Diez, TI5KD, and Deutscher Amateur Radio Club (DARC) Board Member Mitch Wolfson, DJ0QN.

The Guest of Honor was new ARRL President Kay Craigie, N3KN, who mingled with the crowd and shared her thoughts on what it takes to be successful in the Amateur Radio world. Her comments began with the story of how she launched her involvement with the ARRL as an Assistant Section Manager in Eastern Pennsylvania when she said "yes" to a request for her to prepare the Section's newsletter. Her steps to the Presidency of ARRL continued with her role as Section Manger, Vice Director, Director, Vice President, culminating with her election to ARRL President in January 2010. Her message to the audience was simple but straightforward -- those who continue to say "yes" make a commitment to service, as well as a willingness to contribute generously to support the League make significant contributions to both Amateur Radio and to the ARRL.

At the conclusion of President Craigie's remarks, the ARRL announced new members of the Maxim Society. Current Maxim Society Donors gathered to recognize William Fugate, W8IYD; Kenneth Goodwin Jr, K5RG; Charles Heath, K6ZIZ; Henry Pownall, W4FWR; Walter Wooten, W1LW; Kurt Pauer, W6PH, Ted Goldthorpe, W4VHF, and his wife Itice Goldthorpe, K4LVV. The ARRL Maxim Society recognizes donors whose lifetime giving to various ARRL funds reaches $10,000 or more. As of May 2010, the Maxim Society numbers 67 members. For more information -- including all the benefits of membership in the Maxim Society -- visit the Maxim Society Web page on the ARRL Web site <http://www.arrl.org/maxim-society> or call the ARRL Development Office at 860-594-0397.

==> FCC NEWS: FCC SEEKS COMMENTS ON NEWLY PROPOSED RULES FOR AMATEUR RADIO OPERATORS USING SPREAD SPECTRUM COMMUNICATIONS

In March, the FCC released
<http://www.arrl.org/news/fcc-proposes-to-eliminate-spread-spectrum-apc-requirement-reduce-spread-spectrum-power-limit-cleans>
a Notice of Proposed Rulemaking (NPRM
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-45A1.pdf>)
that proposed to amend Part 97 to facilitate the use of spread spectrum communications technologies by eliminating the requirement that amateur stations use automatic power control (APC) to reduce transmitter power when the station transmits a spread spectrum (SS) emission, and reducing the maximum transmitter power output when transmitting a SS emission (WT Docket No 10-62). On May 14, a summary of the NPRM and the Order was published in the Federal Register; the FCC is seeking comments on the NPRM. Comments must be filed on or before June 14, 2010 (30 days after publication in the Federal Register); reply comments must be filed on or before June 28, 2010 (45 days after publication in the Federal Register). Instructions on how to file comments are listed beginning on page 5 of the NPRM
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-38A1.pdf>.

The Commission also attached an Order <http://edocket.access.gpo.gov/2010/pdf/2010-11385.pdf> to the NPRM that makes certain non-substantive revisions to Part 97. According to the FCC, the rules are necessary to amend the Amateur Service rules or conform them to prior Commission decisions, enhancing the usefulness of the Amateur Service rules by making them conform with other Commission rules, thereby eliminating licensee confusion when applying the rules to Amateur Service operations. According to the Federal Register, the new rules take effect July 13, 2010.

==> FCC NEWS: FCC AGAIN DENIES AMATEUR'S PETITION REGARDING STATION IDENTIFICATION

On May 18, the FCC denied a Petition for Reconsideration filed by Glen Zook, K9STH, that asked for changes in Part 97 regarding how often amateurs must identify themselves on the air. This action follows the Commission's denial of Zook's April 2009 Petition for Rulemaking requesting that the Commission amend Section 97.119(a) to change how often amateur stations must identify themselves, specifically "to require that an amateur station transmit its call sign during the first transmission of any communication or series of transmissions, and to allow an amateur station to not transmit its call sign at the end of a communication when the communication or series of transmissions lasts less than three minutes." Read more here <http://www.arrl.org/news/fcc-again-denies-amateur-s-em-petition-em-regarding-station-identification>.

==> ARRL SECTION NEWS: SPRING SECTION MANAGER ELECTION RESULTS

In the only Section Manager race this spring, Tom Ciciora, KA9QPN, of Sandwich, was re-elected as the ARRL Illinois Section Manager with 954 votes. His opponent, Michael J. Schulz, W9MJS, of Wayne, received 799 votes. Election ballots were counted Tuesday at ARRL Headquarters. Ciciora starts his new third two-year term of office on July 1, 2010; he was first elected Section Manager in 2006. The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning July 1: John Poindexter, W3ML, Indiana; Bill Woodhead, N1KAT, Maine; Paul Eakin, KJ4G, Northern Florida; Bonnie Altus, AB7ZQ, Oregon; Paul Gayet, AA1SU, Vermont, and Don Michalski, W9IXG, Wisconsin. There were no nominations received for the next term of office of Section Manager in the Santa Clara Valley Section. Nominations will be re-solicited this summer for an 18-month term of office starting in January 2011.

==> THERE'S STILL TIME TO ENTER THE 2010 ARRL PHOTO CONTEST!

Have you ever wanted to see a photo of yours in QST, the annual ARRL Amateur Radio Calendar or another ARRL publication? Well, here's your chance! If you're among the winners, not only will your photographic skill be propagated far and wide, but we're offering $100 as the First Prize. The winning photo and three runners-up will be published in QST. All submitted photos will also be considered for the 2011 ARRL Calendar. For more information, including rules and requirements, click

here
<http://www.arrl.org/news/there-s-still-time-to-enter-the-2010-arrl-photo-con
test>.

==> CQ ANNOUNCES 2010 HALL OF FAME INDUCTEES

On May 14, CQ magazine announced its 2010 Hall of Fame inductees, welcoming 15 new members into the CQ Amateur Radio Hall of Fame and two new members each into the CQ DX Hall of Fame and the CQ Contest Hall of Fame. The CQ Amateur Radio Hall of Fame honors those individuals -- whether licensed hams or not -- who have made significant contributions to Amateur Radio, as well as those amateurs who have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet. The CQ Contest and DX Halls of Fame honor those amateurs who not only excel in personal performance in these major areas of Amateur Radio, but who also "give back" to the hobby in outstanding ways. Read more about the 19 new inductees here <http://www.arrl.org/news/cq-announces-2010-hall-of-fame-inductees>.

==> AMATEUR RADIO OUTREACH: MAKER FAIRE TO FEATURE AMATEUR RADIO AGAIN IN 2010

Ham radio demonstrations and displays are in the works for Maker Faire, the world's largest do-it-yourself (DIY) festival. As in 2009, the festival will take place at the San Mateo County Expo Center in San Mateo, California on May 22-23. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, this annual event showcases the country's best innovations in science and technology, engineering, arts and crafts, food and music. "Like last year, there is a very well-coordinated effort among area groups to help represent the Amateur Radio Service at Maker Faire," Inderbitzen explained. "Volunteers are planning a variety of visual, interactive and hands-on displays for the thousands of attendees." Read more here
<http://www.arrl.org/news/maker-faire-to-feature-amateur-radio-again-in-2010>
.

==> ARRL FIELD DAY MERCHANDISE NOW AVAILABLE

<https://www.arrl.org/shop/Field-Day-Supplies/> How can you be the best-dressed ham at your Field Day site this year? When you wear the official 2010 ARRL Field Day shirt -- accompanied by the 2010 ARRL Field Day hat -- of course! Field Day -- Amateur Radio's largest on-the-air operating event -- is just a little more than five weeks away, so be sure to get your shirts, hats and pins, as well as the new ARRL Field Day Handbook for Radio Amateurs and coffee mugs before they run out. Field Day shirts are offered in sizes Small-4XL and are royal blue with the 2010 Field Day logo on the left chest; the back of the shirt says "Amateur Radio -- Goodwill • Service • Fun!" with www.arrl.org underneath. Fulfill all your Field Day apparel needs at the Field Day Supplies section of the ARRL Web site
<http://www.arrl.org/shop/Field-Day-Supplies/>.

==> SOLAR UPDATE

Tad "The wonderfulness of the sundown, or stars shining so quiet and bright <http://www.daypoems.net/poems/2084.html>" Cook, K7RA, reports: We've now seen 11 days with no sunspots. The average daily solar flux from May 6-12 dropped from 75.8 to 69.2 for the week of May 13-19. This may end soon, as sunspot group 1063 is due to return in the next two days, and predictions show a rising solar flux: 70 for May 20-21, 72 for May 22-23, 74 for May 24-25, 76 for May 26 and 80 for May 27-June 4. There is also a prediction of geomagnetic instability for today, May 20, with planetary A index for May 20-23 of 18, 15, 8 and 5. The latest issue of WorldRadio online is available for download <http://www.worldradiomagazine.com/> and it contains an interesting propagation column from Carl Luetzelschwab, K9LA, with an analysis of 6 meter propagation from California to New Zealand. Look for more information, including a look at 6 meter propagation reports, on the ARRL Web site on Friday, May 21. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Walt Whitman's Miracles <http://www.daypoems.net/poems/2084.html>.

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/multimedia> This week, the Baltic Contest is May 22-23. Next week, the CQWW WPX Contest (CW) is May 29-30. The Michigan QRP Memorial Day CW Sprint is May 30-31. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, May 23, 2010, for these online course sessions <http://www.arrl.org/online-course-registration> beginning on Friday, June 4, 2010: Amateur Radio Emergency Communications Level 1; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline Report 1710 - May 21 2010

Amateur Radio Newsline report number 1710 with a release date of Friday, May 21, 2010 to follow in 5-4-3-2-1. The following is a Q-S-T. Hamvention 2010 is a big hit. We take you there. Also, an I-A-R-U report says that hams saved lives following the April earthquake, Kenya gives its hams expanded privileges on 40 meters and super-capacitors may replace batteries in critical uses. Find out the details on Amateur Radio Newsline report number 1710 coming your wayright now.

(Billboard Cart Here)
**

The 2010 Dayton Hamvention is now history and by all accounts this years event was bigger than last even considering the poor economy, as we hear from Henry Raminsky, Hamvention's Media and Public Relations Chairman.

(AUDIO Raminsky opening morning)

Heil sounds Chip Margelli, K7JA, echoes Henry's observations about the increased attendance at this years Hamvention.

(AUDIO Margelli)

Henry goes on to tell us that Hamvention is a lot more than just new toys at the vendors and manufacturers inside and everything under the sun outside in the flea market. There's something for just abouteveryone.

(AUDIO Raminsky balloon and forums)

One of the best attended and most anticipated forums is Fridays Ham Radio and the Law forum. Since 1980 James O'Connell, W9WU, has kept attendees abreast of the latest developments as they relate to covenants and antenna restrictions.

(AUDIO O'Connell 1)

If you're thinking about erecting a tower or large antenna this is one forum you really need to attend.

(AUDIO O'Connell 2)

Of course, it wouldn't be Hamvention without the Amateur Radio Newsline Town Hall Meeting. Several hams, well known and not so well known explained how your ham ticket could open the door to your next job.

Well have more on the Town Hall Meeting next week.

**

HAMVENTION 2010: SOME OF THE NEW GEAR

In addition to the Wouxon dual band hand held we told you about previously, there were a number of other new products of interest to those strolling the display area at the HARA arena. Among them, the long awaited Kenwood TS-590S HF/50 MHz All-Mode Transceiver. According to Kenwood, the new radio features a 32-bit floating-point DSP, advanced receiver performance and an extensive range of features that make it ideal for beginner and seasoned DXer alike. The radio's exceptional ease of operation, true to the Kenwood tradition, will be especially welcome for contest and mobile operations. No firm manufacturers suggested retail price for the TS-590 was announced.

But the TS-590S was not the only new entry from Kenwood. Also displayed was the companys APRS capable TH-D72 144 and 430MHz dual band FM Portable. Kenwood says that thanks to the internal GPS unit, APRS operations will be more enjoyable than ever. The TH-D72 also offers Echolink memory compatibility and a mini-USB connector for enhanced computer connectivity.

On the audio side, here's Bob Heil, K9EID on his new microphone and headset offerings.

(AUDIO Bob Heil)

There was lots more new gear shown at Hamvention 2010. We will cover some of it in upcoming Newsline reports.

RESCUE RADIO: CHINA QUAKE IARU R-1 FINAL REPORT

Hams in China became true first responders following last April's Qinghai earthquake. According to a report on the IA-R-Us Region One website, one Beijing based amateur radio rescue team was responsible for saving the lives of 6 people following the tremor. In its final report on ham radio activities following the 7.1 Richter scale earthquake that struck on April 14th the I-A-R-U say that amateur radio operators in China were widely involved in the disaster relief activities. The report says that hams traveled from as far away as Beijing, Sichuan, Shandong, Anhui, Qinghai and Jiangsu to provide

communications aid.

The quake killed more than 2,000 people and relief efforts are continuing for those left homeless. The high altitude caused 90% of the amateur radio rescue team members to suffer altitude sickness, but no one was injured during their efforts to help others affected by the earthquake disaster. (IARU R-1)

**

RESTRUCTURING: KENYA EXPANDS 40 METER PRIVILEGES

The Communications Commission of Kenya has just approved an extension of the amateur radio 40-metre band in that nation. This gives radio amateurs in Kenya the use of the sub-band 7100 to 7200 kHz in the 40 meter band. More is on line at the web link found in this weeks text version of Newsline at www dot newsline dot org.

(DO NOT READ: Communications Commission of Kenya (CCK) http://www.cck.go.ke/) (Southgate)

**

RADIO LAW: FCC SEEKS COMMENTS ON SPREAD SPECTRUM NPRM

The FCC says its time for you to voice your opinion on liberalizing the use of spread spectrum in ham radio.

According to the ARRL, in March the FCC released a Notice of Proposed Rulemaking in WT Docket No 10-62 that suggested amending Part 97 to facilitate the use of spread spectrum communications technologies by eliminating the requirement that amateur stations use automatic power control. This, to reduce transmitter power when the station transmits a spread spectrum emission, and reducing the maximum transmitter power output when transmitting a Spread Spectrum signal.

On May 14th, a summary of the NPRM and the Order was published in the Federal Register and the FCC is seeking comments on the NPRM. Comments must be filed on or before June 14th and reply comments must be filed on or before June 28th. The Commission also attached an Order to the NPRM that makes certain non-substantive revisions to Part 97.

(ARRL)

**

HAM HONORS: CQ ANNOUNCES 2010 HALL OF FAME INDUCTEES

CQ magazine has announced its 2010 Hall of Fame inductees. The 15 new members include some names well known in the hobby. Among these is late ARRL President George S. Wilson who led the ARRL portion of the effort to create the vanity call sign program.

Also being honored this year is the late Gene Harlan, WB9MMM, who was the editor and publisher of ATV Quarterly and founder of Cyberham

magazine. The 2010 inductees to the CQ DX Hall of Fame are writer and DXer Robert Locher, W9KNI, author of the "The Complete DXer" and Lynn Lamb, W4NL who is a co-founder of the Southeastern DX and Contesting Organization. This group sponsors an annual convention featuring well-known speakers on DXing and contesting. Last but by no means least are Don Hill, AA5AU and Larry Weaver, N6TW who have been inducted into the CQ Contest Hall of Fame. The complete list of this year's inductees can be found on-line at www dot cq dash amateur dash radio dot com.

**

RADIO BUSINESS: BELTRONICS TO ABANDON HAM RADIO REPAIR

The Nashua Telegraph reports that Beltronics is ending ham radio repairs because of too much demand.

Until last month, the company had two employees who did part-time repair work on amateur radio gear. When one of those employees retired, company co-owner Dorothy Peabody said, the decision was made to get out of that business because there were more requests for repairs than the one remaining worker could handle.

Dorothy Peabody owns Beltronics with her husband Bernie. She told the newspaper that the desire for repair work is so great that over the past decade Beltronics has repaired radios mailed from as far away as Saudi Arabia, Puerto Rico and South America. The company will now concentrate on its core business of commercial, municipal and ambulance radiosystems.

(DO NOT READ: You can read the full Nashua Telegraph story dated Friday,May 14 at http://www.nashuatelegraph.com/news/738077-196/beltronics-ending-ham-radio-repairs.html)

**

TELECOMMUNICATIONS LAW: SUPREME COURT REFUSES CHALLENGE TO MUST CARRY RULE

The United States Supreme Court has declined to take up a challenge from a cable television system operator. This, to the FCC's 18 year old requirement that cablecasters carry local broadcast stations on theirsystems.

On Monday, May 17th the justices rejected an appeal from Cablevision Corporation. Instead the court upheld a federal "Must Carry" law, enacted in 1992.

Cablevision, the nation's fifth-largest cable TV operator, sued the Federal Communications Commission over its ruling that forced Cablevision to carry the signal of a distant home-shopping station on its Long Island cable systems. The federal appeals court in New York had previously upheld the FCC's determination that the cablecaster

provide a channel for WRNN, based in the town of Kingston which is about 90 miles north of New York City. The case was assigned the designation Cablevision v. FCC, 09-901.

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: KEN MILLER K6IR - S.K.

We are very sad to report the passing of 1999 Dayton Radio Amateur of the Year, Kenneth Miller, K6IR, on March 24th.

Ken Millers professional career spanned over four decades in the executive management and development of products in the electronic equipment manufacturing business segment of industry in the United States, Europe and Asia. In his role as an executive with Lear Jet, Motorola, American Standard, Penril, the Singer Company and other well known corporations, K6IR participated in the production and marketing of a broad array of high-tech electronic products including airborne and ground based communications, navigation instrumentation and digital communications devices.

In ham radio, Ken Miller served the Radio Club of America for several years as Chairman of the Grants-in-Aid Committee. The Quarter Century Wireless Association had named K6IR as recipient of its 1995 Distinguished Service Award for his "engineering accomplishments and his leadership of the Radio Club of America Scholarship Program."

(RCA, QCWA)

**

THE CHANGING OF THE GUARD: TWO SOUTH AFRICAN HAMS KILLED IN PLANE CRASH

The recent airline accident in Tripoli has claimed the lives of 2 well-known South African amateur radio operators. Norbert Taferner, ZS6ANL, his wife Paula and Anton Matthee, ZS6A were killed when the Airbus aircraft they were passengers on crashed.

According to Dennis Green, ZS4BS, Norbert Tafener will be remembered for his years of involvement with the Johannesburg Branch of the South African Radio League. Although retired, he was still active in teaching and lecturing to young and new amateur radio operators in helping them to obtain their licenses. The Tafeners are survived by

one son.

Anton Matthee, ZS6A, lived in Stellenbosch and was a keen off road adventurer, painter and photographer. From reports, he was a truly outgoing person. (Southgate)

**

HAM RADIO IN SPACE: VIETNAM TO LAUNCH HAMSAT

News has been received from XV9AA in Hanoi of a Vietnamese Amateur Radio CubeSat under development. The new bird is designated as F-1. It is expected to be launched by the end of 2010 into a Sun-synchronous, 98 deg inclination low earth orbit.

The satellite F-1 will carry several low-resolution cameras to take photos of the Earth along with temperature and magnetic sensors to study space environment. The satellite will use amateur VHF and UHF frequencies. The IARU has coordinated a downlink frequency of 437.485 MHz to support a 1200 baud AX.25 telemetry link. The F-1 satellite will also transmit a beacon using a modulated Morse code audio signal on FM when it is not in range of the earth station in Hanoi.

(DO NOT READ: More is on line at: http://fspace.fsoft.com.vn/) (Southgate)

**

HAM RADIO IN SPACE; VIOLET SAT TO LAUNCH IN 2011

And the Violet is an Amateur Radio satellite being built at Cornell University. It will launch in early 2011. This bird is described as a 50 cm cube sat and will carry 4k8 UHF simplex packet links with 5 watts of RF downlink power. It will use a star tracker and fiber optic gyro for fine attitude estimation and propagation.

A submission for frequencies has been made to the IARU Amateur Satellite Frequency Coordination panel for operational frequency assignments. The name Violet is derived from its ultraviolet telescope, which includes flight-spare Deep Impact CCDs.

**

HAM RADIO NEAR SPACE: THE ALIEN-1 BALLOON LAUNCH

The flight of ALIEN-1, a high altitude balloon built by three students at Reading School, proved a success. This despite the 50 baud transmission rate of the payload. That meant it could only send down one telemetry string every 15 seconds. As a result it initially looked as though the highest altitude achieved was 33.116km. However, having recovered the payload they got the second-by-second GPS log and this shows the highest achieved altitude was 33.158km: It is believed this altitude is the third highest in the UKHAS UK records. The 434.075 MHz beacon worked well and some great pictures were taken.

**

DX

In DX, G7COD has been issued the call sign D2AK and will be operational nearly every day from the capital of the Republic of Angola. This, for the next 12 months while on a work assignment there. His operation will be on 80 to 10 meters, including WARC frequencies, using SSB and CW. QSL via G7COD, direct only to Andrew Kitchen, 4 Dairy Cottage, Newton Hall Farm, Bank Newton, Skipton, North Yorkshire, BD23 3NT, England.

The Dundalk Amateur Radio Society, using the call EI7DAR stroke P will be activating St. Johns Castle, Carlingford, County Louth Ireland on Saturday and Sunday, May 29th and 30th. Full details of the event are on line at www dot ei7dr dot com. Lastly, ZS1HF is now active as ZS8M from Marion Island. He's reportedly been heard on 7.140, 14.250, 18.150 and 21.266 Mhz. He will be on Marion Island for a full year so there will be plenty of time to have a chat. QSL as he directs on the air.

**

THAT FINAL ITEM: SUPERCAPACITORS MAY REPLACE BATTERIES

And finally this week, failed batteries are a problem that plague both cell-phones and Amateur Radio satellites. But Micro-Super capacitors may provide a solution.

Science Daily reports that Berkeley Lab researcher John Chmiola believes he has found a solution in electrochemical capacitors, which are commonly referred to as "super capacitors." This is because of their higher energy storage densities than conventional dielectric capacitors and higher abuse tolerance than batteries.

In a paper published in the April 23rd issue of the journal Science, titled "Monolithic Carbide-Derived Carbon Films for Micro-Super capacitors," Chmiola and Yury Gogotsi of Drexel University, along with other co-authors, describe a unique new technique for integrating high performance micro-sized super capacitors into a variety of portable electronic devices through common micro-fabrication techniques. They say that this evolving technology could eventually lead to an end to failed batteries in critical equipment including satellites where there is no way to replace a defective battery once the bird has been launched and is on-orbit.

(DO NOT READ: You can Read the full ScienceDaily article 'Is There a Micro-Super capacitor in Your Future?' at http://www.sciencedaily.com/releases/2010/04/1 00426092805.htm)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline. Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline, 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award closes on May 30th. That gives you only a week or so to nominate a deserving teen or pre-teen radio amateur for this yearly ham radio honor.

Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both mail-in and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, back home in Picayune, Mississippi, after enjoying Hamvention 2010. I also say 73 and we thank you for listening.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

**

THE SOCIAL SCENE: HAMVENTION 2010 IS ON

The doors of the 2010 Dayton Hamvention are opening as we go to air. Since 1952 the Dayton Hamvention has been sponsored by Dayton Amateur Radio Association. It has grown to be the world's largest amateur radio gathering, attracting hams from throughout the globe. And according to Assistant General Chairman Mike Kalter, W8CI, this years Hamvention is dedicated to radio clubs and the work that they doworldwide:

--

Kalter: "This years theme is amateur radio clubs worldwide. We decided that as our club is a big club. The Dayton Amateur Radio Association. And it takes a lot of people to put on something like this, so we were thinking that there are a lot of clubs that do a lot of good in the world so we thought that this would be our theme this year. We even have a Club of the Year award that we instituted this year."

--

Mike Kalter made that comment in an interview with RAIN's Hap Holly, KC9RP. At the same time he said that 2010 may be a year of growth for the Hamvention itself:

--

Kalter: "We have sold more tickets to date than we did last year at this time. We have more inside exhibits and more Flea Market spaces sold than we did last year at this time. So it looks as though we are going to be successful on those counts."

--

And what can visitors expect this year? Again, Mike Kalter, W8CI:

--

Kalter: "We have some interesting things that are going to happen. "Discover Homebrew" will be in our demonstration area where anyone wants to bring their homebrew project and set it up.

"We will have a ham radio (training) class this year.

"Returning again this year will be the emergency communications display. That's been a big hit so we have that back as well.

"Also we have some D-Star information. The clubs W8BI Gateway will be linked to the 30-B reflevtor during Hamvention weekend.

"And this year at the (W8BI) special events station we will have speech units so that the visually impaired are able to participate -- so we are pretty excited about that. The exact frequencies are listed at our website at www.hamvention.org"

--

Kalter also says that there will be a lot of interesting speakers leading this years forums:

--

Kalter: "Dr. Paul Bernhart, KF4FOR, the Senior Research Physicist for the Naval Research Lab. He heads up the HAARP project at the Haval Research Lab in Alaska and Aericebo in Pureto Rico. He will be talking about HAARP which is the High Frequency Active Auroral Research Program.

"Gordon West will be there taking stage. He's going to talk about the latest in DSP speakers from Clear Speech and others. If you have never seen a Gordon West forum, they are always a lot of fun.

"Carole Perry is a professional educator from New YorknCity and she will be presenting her Youth Forum.

"And Van Hoi, VR2HF, will be talking about what its like to be a ham in Hong Kong.

"The BalloonSat: forum will be back with Bill Brown, WB8ELK. And we are actually planning a balloon launch on Friday afternoon."

--

By way of background, the Dayton Hamvention started out life as the Southwestern Ohio Hamvention. The first organizational meeting was held in January 1952 with the convention taking place on March 22nd at the old Biltmore Hotel in downtown Dayton. And at that first gathering there were only seven exhibitors and six forums. Even so, it was a far greater success than the Dayton Amateur Radio Association could have ever anticipated. They had hoped to attract 300 visitors but over 600 showed up. Now, almost six decades after John Willig, W8ACE, had asked the Dayton Amateur Radio Association to sponsor a ham radio convention the Dayton Hamvention remains the shining star in the ham radio sky.

We will have a full report on Hamvention 2010 next week. Meantime you can hear Hap Holly's complete interview with Mike Kalter, W8CI, by directing your web browser to www.therainreport.com and downloading this weeks Rain Report file. (ARNewslineT, RAIN)

**

RESTRUCTURING: 70CM IN JEOPARDY DOWN-UNDER

Radio Amateurs in Australia are worried that they may soon loose access to some or all of the 420 to 450 MHz band. This after the Australian Communications and Media Authority issues a statement on future use of the spectrum from 403 to 520 MHz.
